Wireless telegraphy is very extensively used throughout these wide territories; but we are not at present in a position to give any information regarding Laws and Regulations. Reference to the 1921 edition of the Year-Book will give such Statutes and Regulations as were in existence prior to the *coup de état* mentioned above.

SAINT HELENA

THIS lonely little island, with an area forty-seven square miles, in the South Atlantic, lies about 800 miles from the nearest land (Ascension Island) and 1,200 miles from the West Coast of Africa. Its claim to fame rests upon the fact that it formed the place of exile of the great Napoleon.

St. Helena is an Admiralty coaling station and a resting place for the Eastern Telegraph Company's cable between Cape Town and St. Vincent (Cape de Verdes).

ADMINISTRATION.

Wireless Telegraphy is administered under the following Ordinance and Regulations :—

A—Wireless Telegraphy Ordinance, No. 2 of 1913.

B—Regulations.

IN THE FOURTH YEAR OF THE REIGN OF HIS MAJESTY KING GEORGE V.

MAJOR HARRY EDWARD SPILLER CORDEAUX, Companion of the Most Honourable Order of the Bath; Companion of the Most Distinguished Order of Saint Michael and Saint George; Governor and Commander-in-Chief. 14th July, 1913.

A An Ordinance to provide for the regulation of wireless telegraphy.

Be it enacted by the Governor of St. Helena as follows :—

I. This Ordinance may be cited as the "Wireless Telegraphy Ordinance, 1913."

II. In this Ordinance "Wireless Telegraphy" means any system of communication by telegraph without the aid of any wire connecting the points from and at which the messages or other communications are sent or received: Provided that nothing in this Ordinance shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

III. A person shall not establish any wireless telegraphy station or instal or work any apparatus for wireless telegraphy in any place or on board any ship registered in the Colony except under and in accordance with a license granted in that behalf by the Governor.

2. Every such license shall be in such form and for such period as the Governor may determine, and shall contain the terms, conditions and restrictions on and subject to which it is granted.

IV. A person shall not work any apparatus for wireless telegraphy installed on any merchant ship, whether British or foreign, while that ship is in the territorial waters of the Colony, otherwise than in accordance with regulations under this Ordinance.

V. The Governor in Council may from time to time make regulations for carrying into effect the purposes of this Ordinance, and such regulations shall on publication in the Gazette have the same effect as if enacted in this Ordinance.

2. The regulations in the Schedule to this Ordinance shall have effect except in so far as they may be amended or rescinded by regulations made under the authority of this section.

3. If at any time, in the opinion of the Governor an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships while in the territorial waters of the Colony shall be subject to such further regulations as may be made by the Governor from time to time, and such regulations may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

VI. If a Magistrate is satisfied by information on oath that there is reasonable ground for suspecting that a wireless telegraph station has been established without license in that behalf, or that any apparatus for wireless telegraphy has been installed or worked in any place, or on board any merchant ship without a license in that behalf, or contrary to the provisions of any regulations made under this Ordinance, or of any license granted under this Ordinance, he may grant a search warrant to any police officer or any person appointed in that behalf by the chief of police and named in the warrant and a warrant so granted shall authorise the police officer or person named therein to enter and inspect the station, place, or ship and to seize any apparatus which appears to him to be used or intended to be used for wireless telegraphy therein.

VII. (1) Any person who shall offend against any provision of this Ordinance or any of the regulations made thereunder shall be liable on summary conviction for every such offence to a fine not exceeding £50, and upon such conviction the Court may order that any apparatus for wireless telegraphy in connection with which the offence was committed shall be seized and forfeited.

2. Proceedings shall be taken before the police magistrate on the complaint of the chief of police or of any other person thereto authorised by him in writing, and the procedure shall be the same as the procedure for the time being in force in respect of offences punishable on summary conviction.

VIII. "The Wireless Telegraphy Ordinance, 1912," is hereby repealed.

GOD SAVE THE KING!

Given under the Public Seal of the Island of St. Helena this 14th day of July, 1913.

By command of His Excellency the Governor,

(Signed) A. Hands,
Chief Clerk.

REGULATIONS.

Made by the Govenor in Council under Ordinance No. 2 of 1913, entitled "An Ordinance to provide for the Regulation of Wireless Telegraphy."

I. All apparatus for wireless telegraphy on board a merchant ship in the territorial waters of the Colony shall be worked in such a way as not to interfere with

(a) Naval signalling, or

(b) the working of any wireless telegraph station lawfully established, installed or worked in the Colony or the territorial waters thereof, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

II. In these Regulations "Naval Signalling" means signalling by means of any system of wireless telegraphy between two or more ships of His Majesty's Navy, between ships of His Majesty's Navy and Naval Stations, or between a ship of His Majesty's Navy or a Naval Station and any other wireless telegraph station whether on shore or on any ship.

III. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used while such ship is in any harbour or bay of the Colony except with the special or general permission of the Governor.

IV. For the purpose of any proceedings under these regulations the master or person being or appearing to be in command or charge of any ship shall be deemed to have authorised and to be responsible for the use or working of any apparatus on board such ship.

V. Any summons or other document in any proceedings under these regulations shall be deemed to have been duly served on the person to whom the same is addressed by being left on board the ship on which the offence is charged to have been committed with the person being or appearing to be in command or charge of the ship.

VI. These regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

Made by the Governor in Council this 14th day of July, 1913.

(Signed) A. Hands,
Chief Clerk.

SAINT KITTS-NEVIS

(See Leeward Islands.)

SAINT LUCIA

(See map on p. 376.)

ST. LUCIA, lying 30 miles north-east of St. Vincent, possesses a total area of 233 square miles. One of the most notable features consists of a twin natural phenomenon known as the Pitons, great conical mountains, which lie at the mouth of Soufrière Bay. Castries, the capital, is on the western coast, near its northern extremity.

CONTROL AND ORGANISATION.

The wireless station, situated on the Morne Fortune overlooking the capital, was erected by the Admiralty in 1915, and is maintained and controlled by that Department. The officer in charge is a naval petty officer telegraphist and the operators are naval ratings.

ADMINISTRATION.

Wireless telegraphy is administered under an Ordinance of 1912 and various Regulations issued on its authority.

A—Wireless Telegraphy Ordinance, 1912.
B—Regulations of November 25th, 1912.
C—Regulations of August 24th, 1914.
D—Regulations affecting Ship Stations, June 9th, 1917.

WIRELESS TELEGRAPHY ORDINANCE.
No. 10 of 1912.

A This Ordinance may be cited as the Wireless Telegraphy Ordinance, 1912.

2. In this Ordinance "wireless telegraphy" means any system of communication by telegraph without the aid of any wire connecting the points from and at which the messages or other communications are sent or received: Provided that nothing in this Ordinance shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

3. (*a*) A person shall not establish any wireless telegraph station or instal or work any apparatus for wireless telegraphy in any place or on board any ship registered in the Colony except under and in accordance with a license granted in that behalf by the Governor.

(*b*) Every such license shall be in such form and for such period as the Governor may determine, and shall contain the terms, conditions and restrictions on and subject to which it is granted.

4. A person shall not work any apparatus for wireless telegraphy installed on any merchant ship, whether British or Foreign, while that ship is in the territorial waters of the Colony, otherwise than in accordance with regulations under this Ordinance.

5. (*a*) The Governor may from time to time make regulations for carrying into effect the purposes of this Ordinance, and such regulations for carrying into effect the purposes of this Ordinance, and such regulations shall on publication in the *Gazette* have the same effect as if enacted in this Ordinance.

(*b*) The regulations in the Schedule to this Ordinance shall have effect except in so far as they may be amended or rescinded by regulations made under the authority of this section.

(*c*) If at any time, in the opinion of the Governor, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships while in the territorial waters of the Colony shall be subject to such further regulations as may be made by the Governor from time to time, and such regulations may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

6. If a Magistrate is satisfied by information on oath that there is reasonable ground for suspecting that a wireless telegraph station has been established without a license in that behalf, or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any merchant ship without a license in that behalf or contrary to the provisions of any regulations made under this Ordinance or of any license granted under this Ordinance he may grant a search warrant to any police officer or any person appointed in that behalf by the Chief of Police and named in the warrant, and a warrant so granted shall authorise the police officer or person named therein to enter and inspect the station, place or ship and to seize any apparatus which appears to him to be used or intended to be used for wireless telegraphy therein.

7. (*a*) Any person who shall offend against any provision of this Ordinance or any of the regulations made thereunder shall be liable on summary conviction for every such offence to a fine not exceeding fifty pounds, and upon such conviction the Court may order that any apparatus for wireless telegraphy in connection with which the offence was committed shall be seized and forfeited.

(*b*) Proceedings shall be taken before the First District Court on the complaint of the Chief of Police or of any person thereto authorised by him in writing, and the procedure shall be the same as the procedure for the time being in force in respect of offences punishable on summary conviction.

8. The Wireless Telegraph Ordinance, 1903, is hereby repealed.

SCHEDULE—SECTION 5 (2).

REGULATIONS PASSED NOVEMBER 25TH, 1912.

B

All apparatus for wireless telegraphy on board a merchant ship in the territorial waters of the Colony shall be worked in such a way as not to interfere with—

(*a*) Naval signalling, or

(*b*) The working of any wireless telegraph station lawfully established, installed or worked in the Colony or the territorial waters thereof; and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

2. In these regulations "naval signalling" means signalling by means of any system of wireless telegraphy between two or more ships of His Majesty's Navy, between ships of His Majesty's Navy and naval stations, or between a ship of His Majesty's Navy or a naval station and any other wireless telegraph station whether on shore or on any ship.

3. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used while such ship is in any harbour or bay of the Colony except with the special or general permission of the Governor.

4. For the purpose of any proceedings under these regulations the master or person being or appearing to be in command or charge of any ship shall be deemed to have authorised and to be responsible for the use or working of any apparatus on board such ship.

5. Any summons or other document in any proceedngs under these regulations shall be deemed to have been duly served on the person to whom the same is addressed by being left on board the ship on which the offence is charged to have been committed with the person being or appearing to be in charge or command of the ship.

6. These regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

REGULATIONS PASSED AUGUST 24TH, 1914.

C

Whereas by Section 5 (3) of the Wireless Telegraphy Ordinance, 1912, it is enacted that if at any time, in the opinion of the Governor, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy the use of wireless telegraphy on board merchant ships while in the territorial waters of the Colony shall be subject to such further regulations as may be made by the Governor from time to time; and such regulations may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

And whereas, in my opinion, such emergency as aforesaid has arisen :—

Now I (the Acting Administrator) do hereby make the following further Regulations namely :—

1. The Governor may appoint any person to take possession and control of the apparatus for wireless telegraphy on board of any merchant ship while in the territorial waters of the Colony.

2. Any person so appointed may enter upon any such ship and take possession of the aforesaid apparatus thereon on behalf of His Majesty, and use the same for His Majesty's Service, and subject thereto for such ordinary services as to the said person may seem fit.

3. Any such person may instead of taking possession of such apparatus as aforesaid direct the master of the ship to submit or cause to be submitted to him all messages intended for transmission or arriving by the said apparatus or any class or classes of such messages, to stop or delay the transmission of any messages or deliver the same to him, and generally to obey all such directions with reference to the transmission of messages as such person may prescribe and the master of the ship shall obey and conform to all such directions. Any master failing to obey and conform to any such direction shall be liable on summary conviction to the penalties provided under the Ordinance.

REGULATIONS MADE BY THE GOVERNOR.

OPERATION OF SHIP STATIONS WITHIN THE TERRITORIAL WATERS OF THE COLONY.

June 9th, 1917.

D

1. The radiotelegraph stations on board ships (other than His Majesty's ships of war or ships of war of his Allies) shall not be worked whilst such ships are within the territorial waters of the Colony.

2. For the proper enforcement of the above ships of British register in the territorial waters of the Colony must completely disconnect their aerial wires from their radio apparatus, the ends of such wires being suspended entirely clear of the radiotelegraph cabin, preferably from the main rigging in such a manner as to show they are properly disconnected.

3. Ships of foreign register in the territorial waters of the Colony must—subject to the provisions of the following Regulation 4—take down their aerial wires completely and disconnect the same from their radiotelegraph apparatus.

4. Ships of foreign register remaining in the territorial waters of the Colony for less than twelve hours may, at the discretion of the competent naval authority, or the person appointed by the Governor for the purpose, be permitted to leave their aerials up, provided the same are disconnected in accordance with the provisions of Regulation 2 of these regulations.

SAINT VINCENT (B.W.I.)

ST. VINCENT, lying 30 miles south-west of St. Lucia and 97 miles west of Barbados, comprises an area of 140 square miles.

ADMINISTRATION.

No wireless stations exist in this Colony, but wireless telegraphy would be administered under an Ordinance and Regulations which figure below.

A—Wireless Telegraphy Ordinance, 1913.

B—Regulations.

ORDINANCE.

A This Ordinance may be cited as "The Wireless Telegraphy Ordinance, 1913."

2. In this Ordinance "Wireless Telegraphy" means any system of communication by telegraph without the aid of any wire connecting the points from and at which the messages or other communications are sent or received: Provided that nothing in this Ordinance shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

3. (1) A person shall not establish any wireless telegraph station or instal or work any apparatus for wireless telegraphy in any place or on board any ship registered in the Colony except under and in accordance with a licence granted in that behalf by the Governor.

(2) Every such license shall be in such form and for such period as the Governor may determine, and shall contain the terms, conditions, and restrictions on and subject to which it is granted.

4. A person shall not work any apparatus for wireless telegraphy installed on any merchant ship, whether British or foreign, while that ship is in the territorial waters of the Colony otherwise than in accordance with regulations under this Ordinance.

5. (1) The Governor in Council may from time to time make regulations for carrying into effect the purposes of this Ordinance, and such regulations shall on publication in the *Gazette* have the same effect as if enacted in this Ordinance.

(2) The Regulations in the Schedule to this Ordinance shall have effect except in so far as they may be amended or rescinded by regulations made under the authority of this section.

(3) If at any time, in the opinion of the Governor, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships while in the territorial waters of the Colony shall be subject to such further regulations as may be made by the Governor from time to time, and such regulations may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

6. If a Magistrate is satisfied by information on oath that there is reasonable ground for suspecting that a wireless telegraph station has been established without a license in that behalf, or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any merchant ship without a license in that behalf or contrary to the provisions of any regulations made under this Ordinance, or of any license granted under this Ordinance, he may grant a search warrant to any Police Officer or any person appointed in that behalf by the Chief of Police and named in the warrant, and a warrant so granted shall authorise the Police Officer or person named therein to enter and inspect the station, place, or ship, and to seize any apparatus which appears to him to be used or intended to be used for wireless telegraphy therein.

7. (1) Any person who shall offend against any provision of this Ordinance or any of the regulations made thereunder shall be liable on summary conviction for every such offence to a fine not exceeding fifty pounds, and upon such conviction the Court may order that any apparatus for wireless telegraphy in connection with which the offence was committed shall be seized and forfeited.

(2) Proceedings shall be taken before the Police Magistrate of the First District on the complaint of the Chief of Police or of any person thereto authorised by him in writing, and the procedure shal be the same as the procedure for the time be.. g in force in respect of offences punishable on summary conviction.

8. "The Wireless Telegraph Ordinance, 1904," and "The Wireless Telegraph Amendment Ordinance, 1912," are hereby repealed.

REGULATIONS.

B 1. All apparatus for wireless telegraphy on board a merchant ship in the territorial waters of the Colony shall be worked in such a way as not to interfere with—

(*a*) Naval signalling, or

(*b*) the working of any wireless telegraph station lawfully established, installed, or worked in the Colony or the territorial waters thereof, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

2. In these Regulations "Naval Signalling" means signalling by means of any system of wireless telegraphy between two or more ships of His Majesty's Navy, between ships of His Majesty's Navy and Naval Stations, or between a ship of His Majesty's Navy or a Naval Station and any other wireless telegraph station whether on shore or on any ship.

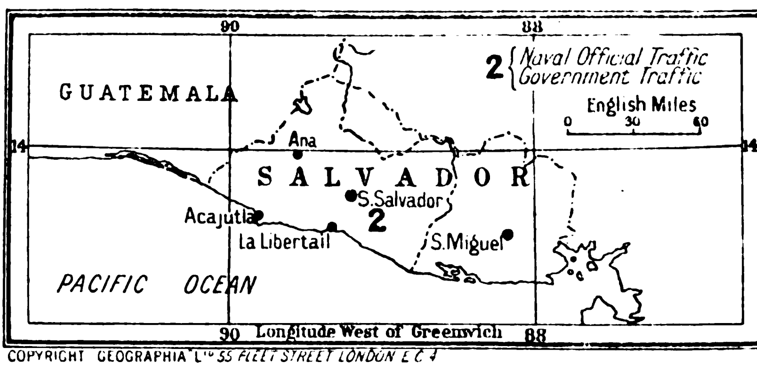
3. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used while such ship is in any harbour or bay of the Colony except with the special or general permission of the Governor.

4. For the purpose of any proceedings under these regulations the master or person being or appearing to be in command or charge of any ship shall be deemed to have authorised and to be responsible for the use or working of any apparatus on board such ship.

5. Any summons or other document in any proceedings under these Regulations shall be deemed to have been duly served on the person to whom the same is addressed by being left on board the ship on which the offence is charged to have been committed with the person being or appearing to be in command or charge of the ship.

6. These Regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

7. Regulations made by the Governor in Council on the 17th day of December, 1912, under the authority of the Wireless Telegraphy Ordinances, 1904 and 1912 are hereby repealed



SALVADOR

THE independent Republic of El Salvador is situated on the West Coast of Central America, and occupies an area estimated at 9,500 square miles. The population, according to the Census of 1919, numbers 1,336,442. It originated in the course of the dissolution of the Central American Federation (Guatemala, El Salvador, Honduras, Nicaragua, and Costa Rica) which took place in 1839.

The form of Government is Republican, democratic and representative, and there are three branches of Administration: (1) The Executive, which comprises the President and Cabinet Ministers; (2) the Legislature or National Assembly; and (3) the Judiciary.

CONTROL AND ORGANISATION.

The only wireless station was erected by the Government and inaugurated in September, 1917. It is situated at the southern end of the city of San Salvador, near the military post "El Zapote." The station is open to public correspondence with ships. The station was presented to this Government by the Government of Mexico, and is known by the name of "Estación Venustiano Carranza."

Las Lomas de Candeleria open for official correspondence (N of Acajutla).

Radiotelegraphy is a State monoply and is under the control of the Telegraph and Telephone Administration, which forms one of the departments of the "Ministerio de Gobernacion y Fomento." Private companies or individuals are permitted under license from the Government to erect and work wireless telegraph and telephone stations provided the present contract with the Cable Company is not infringed.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	*Title.*	*Address.*
Señor Dr. Baltasar Estupinián..	Minister of Public Works	San Salvador
Señor Don Ricardo Posada ..	Director of Telegraphs	San Salvador

ADMINISTRATION.

At present there are no special laws regulating wireless telegraphy, and the only publication which deals with this subject is the *Revista Telegrafica*, the official organ issued by the Director-General of Posts and Telegraphs, wherein are reported any such notices and items.

SAMOA ISLANDS

(See map on p. 424.)

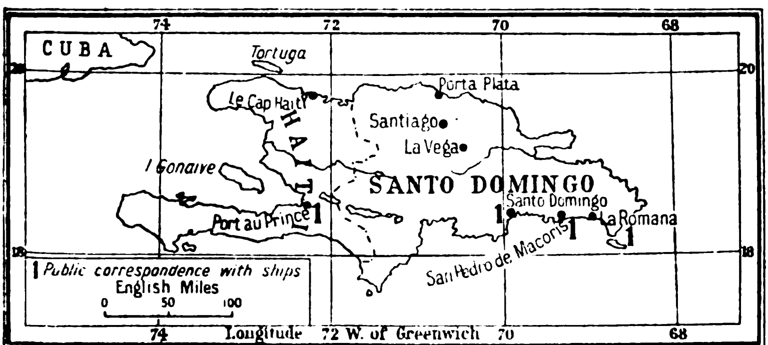
SANDWICH ISLANDS

(See UNITED STATES OF AMERICA.)

SANTO DOMINGO (DOMINICAN REPUBLIC)

THE island of Santo Domingo is divided between two States, the Western being the Republic of Haiti, the Eastern the Republic of Santo Domingo. French is the official language of the former, Spanish of the latter. The first constitution of the Dominican Republic bears the date of November 18th, 1844; it has been amended several times, and the one in force at present bears the date of February 22nd, 1908. The President administers the Executive, the Legislative functions devolving on a National Congress with two Chambers, the Senate and Cámara de Diputados (House of Deputies). The United States landed troops in May, 1916, and is supervising the administration for the present. The Republic covers an area of 50,000 square kilometres, and is divided into twelve provinces. The population is calculated at 884,761 inhabitants.

CONTROL.



The supervision of the wireless service is under the control of the Superintendent of Posts and Telegraphs, who, in turn, is subordinate to the Director-General of Posts and Telegraphs, under the Department of "Fomento y Communicaciones."

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	*Title.*	*Address.*
Lieut.-Comdr. R. M. Warfield, C.E.C., U.S. Navy	Officer in Charge of the Department of "Fomento y Comunicaciones"	Government Palace, Santo Domingo City
Mr. E. H. Hathaway	Director-General of Posts and Telegraphs	Senate Building, Santo Domingo City
Dr. Eduardo R. Soler, C.E.	Superintendent of Telegraphs	Santo Domingo City
Mr. W. H Reiksick	Electrical Gunner, U.S.N.	Wireless Telegraph, Santo Domingo City

ORGANISATION.

The first land wireless station was erected at the capital city of Santo Domingo in 1908. The apparatus, supplied by the de Forest Company of

San Pedro de Macoris closed.

New York, did not work satisfactorily, and despite the using of a power of 20 kw., only established irregular communication with Puerto Rico. After a lapse of five years, a 2-kw. set was installed in September, 1913, and regular public communication was instituted with Puerto Rico. In addition to this publicly owned station, there is a station at La Romana (in the Province of Seybo), owned by the (Sugar Refining) Central Guanica Company in Puerto Rico. The latter relays to the British Cable Company in Puerto Rico, and thus touch is maintained with the outside world.

In March, 1919, the two kilowatt set in the Radio Station of Santo Domingo was replaced by a new set, which includes one Radio Transmitter "Marconi System," of 5 kilowatts, 500 cycles, of 250 volts, alternating current.

Communication can now be made direct with San Juan, Puerto Rico, without the intervention of the Ensenada Station. The transmission of messages *via* Ensenada is now assured by day as well as by night, excepting when there are electric disturbances. It is also possible to have direct communication with Guantanamo, Cuba, especially at night, and with Port-au-Prince, Haiti.

Two steel towers, each 225 feet high, have been erected for the antennæ, which are 500 feet in length.

There are no public aviation, meteorological or press services, but there is an extensive storm warning service. The United States air station sends a daily weather report to Washington.

There are no direction finding stations.

ADMINISTRATION.

There are no special Laws and Regulations relating to wireless telegraphy and telephony.

A public contract is in force with the Central Guanica and Central Romana (Sugar Refining) Companies, dated December 19th, 1913. This lays down the conditions under which the two companies conduct for the Dominican Government Public Radiotelegraphic Service through the medium of their stations.

Clause I deals with the rates per word for foreign messages, which for the general public amounts to 30 cents per word.

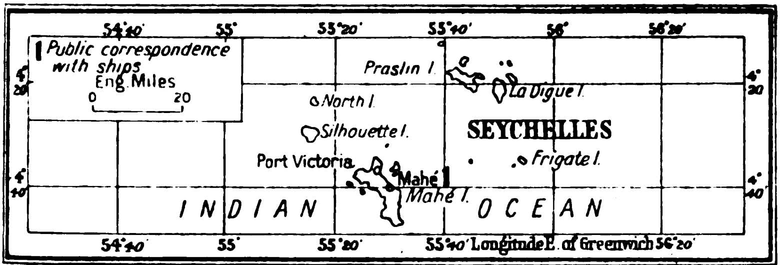
Clause II deals with radio rates in the island—8 cents per word.

Clause III deals with special rates for officials of the States and the two companies, press rates, etc.

Clauses IV, V, and VI deal with matters and methods of accounting.

SARAWAK

(See Borneo, British.)



SEYCHELLES ISLANDS

THIS Colony consists of a group of islands belonging to Great Britain, almost in the middle of the Indian Ocean, and 600 miles north-east of Madagascar. Formally associated with Mauritius, the Colony of Seychelles was at one time administered from that island; but in 1888 a special Administrator was created, and the occupant of the post in 1903 was raised to the rank of Governor.

The principal island is Mahé (52½ square miles), and the Colony includes a number of dependent islands, which bring its total estimated area up to 156 square miles.

CONTROL AND ORGANISATION.

There are no private or commercial wireless installations. The only installation in the Colony was erected in 1915 at North-West Bay, Mahé, and belongs to the Admiralty.

COPYRIGHT "GEOGRAPHIA" L^TD 55 FLEET STREET LONDON E.C. 4

This station was closed for communication purposes on July 15th, 1921, but a " Care and Maintenance Party " has been left to keep the plant in running order.

There is no official of the Seychelles Government Service who is specially charged with the supervision of radiotelegraphy. Its control forms part of the general administration, of which the principal personnel will be found below.

Official.	*Title.*	*Address.*
Lieut.-Col. the Hon. Sir Eustace Fiennes, Bart.	Governor and Commander-in-Chief	Mahé
His Honour P. B. Petrides	Chief Justice	Mahé
Hon. J. L. Devaux	Legal Adviser and Crown Prosecutor	Mahé
Hon. E. Taylor	Treasurer and Collector of Customs	Mahé
Dr. J. B. Addison, O.B.E.	Chief Medical Officer	Mahé
Mr. G. S. Follows	Private Secretary	Mahé

ADMINISTRATION.

Radiotelegraphy is administered under the Ordinances, the text of which will be found below, and which cancel " The Telegraphic and Electrical Stations Ordinance, 1903," printed in our former issues.

The list of current rules here included is as follows :—

A—Ordinance No. 3 of 1914.
B—Ordinance No. 11 of 1917.
C—Regulations (No. 127) thereunder.

ORDINANCE No. 3 OF 1914.
Dated February 19th, 1914.

Enacted by the Governor of the Colony of Seychelles with the advice and consent of the Legislative Council thereof.

A To provide for the regulation of wireless telegraphy.

Be it enacted by the Governor of the Colony of Seychelles with the advice and consent of the Legislative Council thereof, as follows :—

1. This Ordinance may be cited as " The Wireless Telegraphy Ordinance, 1914."

2. In this Ordinance and in any regulation made thereunder the expression " Wireless Telegraphy " means any system of communication by telegraph without the aid of any wire connecting the points from and at which the messages or other communications are sent and received : Provided that nothing in this Ordinance shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

3. The Governor may whenever he shall deem it expedient to do so license the establishment of any wireless telegraph station or the installation or working of any apparatus for wireless telegraphy in any place in the Colony or on board any British ship registered in the Colony.

4. (1) No person shall establish any wireless telegraph station or instal or work any apparatus for wireless telegraphy in any place in the Colony or on board any British ship registered in the Colony except under and in accordance with a license granted in that behalf by the Governor.

(2) Every such license shall be in such form and for such period as the Governor in Executive Council may determine and shall contain such terms, conditions and restrictions on and subject to which the license is granted as the Governor shall consider desirable in the public interest.

5. (1) If any person establishes a wireless telegraph station without a license in that behalf or instals or works any apparatus for wireless telegraphy without a license in that

behalf he shall be liable to a fine not exceeding two thousand rupees (Rs. 2,000) or to imprisonment for a term not exceeding twelve months and in either case be liable to forfeit any apparatus for wireless telegraphy installed or worked without a license, but no proceedings shall be taken against any person under this Ordinance without the previous sanction of the Crown Prosecutor.

(2) If the Chief Justice or the Police Magistrate is satisfied by information on oath that there is reasonable ground for believing that a wireless telegraph station has been established without a license in that behalf or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any ship within the jurisdiction without a license in that behalf he may grant a search warrant to any Police Officer to enter and inspect the station, place or ship and to seize any apparatus which appears to him to be used or intended to be used for wireless telegraphy therein.

6. (1) The Governor in Executive Council may make regulations for all or any of the following matters :—

(i) for prescribing the form and manner in which applications for license under this Ordinance are to be made;

(ii) for prescribing the fees payable on the grant of any license;

(iii) for regulating the manner in which apparatus for wireless telegraphy on board a merchant ship whether British or foreign in the waters of the Colony shall be worked so as to prevent interference with naval signalling or the working of any wireless telegraph station lawfully established, installed or worked in the Colony or the waters thereof and so as to not interrupt or interfere with the transmission of any wireless messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea;

(iv) for prohibiting except with the special or general permission of the Postmaster of the Colony the working or using of any apparatus for wireless telegraphy on board a merchant ship whether British or foreign whilst such ship is in any of the harbours of the Colony;

(v) for prohibiting or regulating in case at any time in the opinion of the Governor an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy on board merchant ships whether British or foreign in the waters of the Colony the use of wireless telegraphy on board such ships while in such waters by such further rules as the Governor may see fit to make from time to time and either in all cases or in such cases as may be deemed desirable.

(2) Provided that no regulations made in respect of the matters described in paragraph (iii) (iv) and (v) of this section shall apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

7. When an applicant for a license proves to the satisfaction of the Governor that the sole object of obtaining the license is to enable him to conduct experiments in wireless telegraphy a license for that purpose shall be granted subject to such special terms, conditions and restrictions as the Governor may think proper but shall not be subject to any rent or royalty.

8. Every omission or neglect to comply with and every act done or attempted to be done contrary to the provisions of this Ordinance or of any regulations made thereunder or in breach of the conditions and restrictions subject to or upon which any license has been issued shall be deemed to be an offence against this Ordinance and for every such offence not otherwise specially provided for the offender shall in addition to the forfeiture of any articles seized be liable to a fine of one thousand Rupees (Rs. 1,000).

9. Ordinance No. 4 of 1903 is hereby repealed.

Ordinance No. 11 of 1917.

An Ordinance to Amend Ordinance No. 3 of 1914.

Dated September 1st, 1917.

Be it enacted by the Governor of the Colony of Seychelles by and with the advice and consent of the Legislative Council thereof, as follows :—

1. This Ordinance may be cited as "The Wireless Telegraph (Amendment) Ordinance, 1917," and shall be construed as one with the Wireless Telegraph Ordinance, 1914.

2. Section 6 (iv) of the Wireless Telegraphy Ordinance, 1914, is hereby repealed and replaced by the following :—

(iv) For prohibiting except with the general or special permission of the Governor, the working or using of any apparatus for wireless telegraphy on board any ship whether British or foreign other than His Majesty's ships of war, whilst such ship is in the waters of this Colony and for the control or disposal of any apparatus, instrument or thing which may be used in connection with wireless telegraphy on board any ship (other than His Majesty's ships of war) whilst such ship is in the waters of the Colony.

3. Section 6 (2) of the Wireless Telegraphy Ordinance, 1914, is hereby repealed.

4. (1) The Governor may appoint officers for the purpose of seeing that the provisions of the Wireless Telegraphy Ordinance, 1914, as amended by this Ordinance, and any regulations made thereunder are complied with and it shall be lawful for such officers to go on board any ship whether British or foreign whilst any such ship is at anchor in the waters of the Colony to see that such provisions are complied with.

(2) If any such officer is molested, obstructed, hindered or insulted while in the execution of his duties an offence shall be deemed to have been committed.

5. For the purpose of any proceedings under the Wireless Telegraphy Ordinance, 1914, as amended by this Ordinance, or under any regulations made thereunder, the master or person being or appearing to be in command or charge of any ship shall be deemed to have authorised and to be responsible for the use or working of any apparatus on board such ship and for any breach of the Wireless Telegraphy Ordinance, 1914, as amended by this Ordinance, and any regulations made thereunder.

6. Any summons or other document in any proceedings under the Wireless Telegraphy Ordinance, 1914, as amended by this Ordinance, shall be deemed to have been duly served on the person to whom the same is addressed by being left on board the ship on which the offence is charged to have been committed with the person being or appearing to be in command or charge of the ship.

7. The regulations published in *Gazette* No. 22 of 1914 under Government Notification No. 52 of 1914 are hereby repealed.

Passed in the Legislative Council at a meeting held on the 27th August, 1917.

REGULATIONS.

No. 127 of 1917.

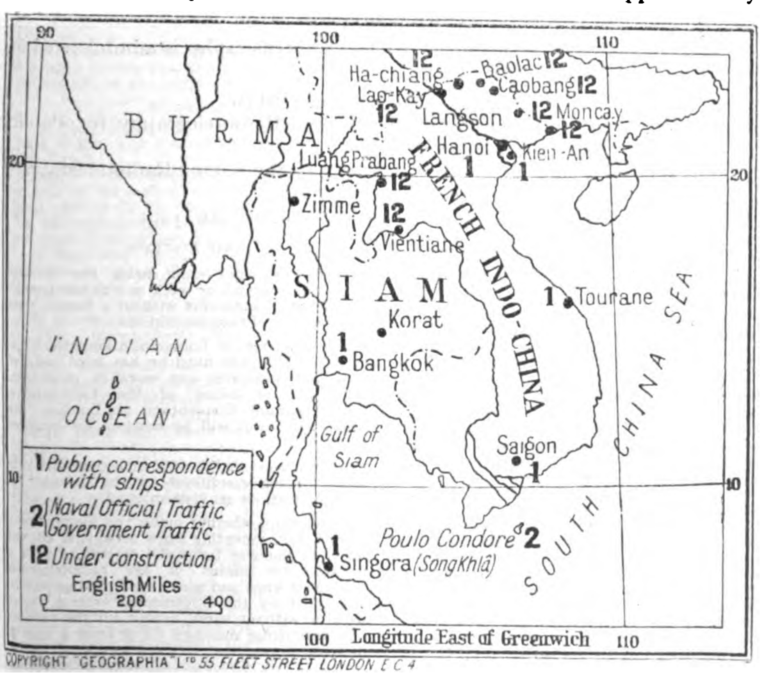
1. The radiotelegraph stations on board ships (other than His Majesty's ships of war) shall not be worked whilst such ships are within any harbour or bay of the Colony.

2. For the proper enforcement of section 1 of these regulations ships of British register in any harbour or bay of the Colony must completely disconnect their aerial wires from their radio apparatus, the ends of such wires being suspended entirely clear of the radiotelegraph cabin, preferably from the main rigging, in such a manner as to show they are properly disconnected.

3. (1) Ships of foreign register in any harbour or bay of this Colony must, subject to the provisions of sub-section 2 of this section, take down their aerial wires completely and disconnect the same from their radiotelegraph apparatus.

(2) Ships of foreign register remaining in a harbour or bay of this Colony for less than twelve hours may, at the discretion of the Governor, be permitted to leave their aerials up, provided the same are disconnected in accordance with the provisions of section 2 of these regulations.

4. Any officer appointed under the provisions of section 4 of Ordinance No. 11 of 1917 may order that the radiotelegraph cabin on board any ship (other than His Majesty's ships of war) be sealed and he shall thereupon affix his seal to such cabin.



If any seal so affixed is removed or tampered with an offence shall be deemed to have been committed against these regulations.

Made by His Excellency the Governor in Executive Council at a meeting held on the 24th day of September, 1917.

SIAM.

THE Kingdom known to us as Siam, to the natives as Muang Thai, lies between British Burma and French Indo-China. Its integrity is guaranteed by France and Great Britain under mutual agreement. The form of government is an absolute monarchy, with an Executive Council of ministers.

The total area of Siam (inclusive of all the islands) measures about 240,000 English square miles. The coast line extends approximately

Tourane and Saigon also official correspondence.

over 2 000 miles, and geographically Siam lies between 5° 40′ and 20° 20′ N. latitude, and between 97° 5′ and 105° 0′ E. longitude. The greatest distance east to west is estimated at about 510 miles, and that from north to south 1,005 miles.

CONTROL.

Radiotelegraphy is organised in Siam under supervision of the Minister of Marine, but it is now controlled by the Ministry of Communications in so far as the public is concerned. The first stations erected were those at Saladeng in Bangkok (lat. 13° 44′ 32.49″ N., long. 100° 29′ 22.30″ E.), and at *Songkhlâ (lat. 7° 10′ 0″ N., long. 100° 36′ 12″ E.); both these land stations are directly controlled by Government.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	*Title.*	*Address.*
Eng. Commander Phra Vidyu Duralikhit ..	Head and Chief Engineer of Radio-telegraphic Department	Wireless Station, Bangkok
Eng. Lieut.-Commander Lvang Jamnara-Aggikich	Assistant Engineer	Wireless Station, Bangkok
Lieut. Hatha Yuvanakara	Station Master	Bangkok
Eng. Junior Lieut. Chvam Kalantanandha	Operating Instructor	Bangkok
Sub.-Lieut. Cherm Chatiketa	Principal Assistant	Bangkok
Sub.-Lieut. Prasidhi Yangprida	Principal Assistant	Bangkok
Junior Lieut. Mee Pathamanavia	Station Master	Songkhla
Junior Lieut. Man Promphisuthi	Station Engineer	Songkhla

ORGANISATION.

There are experimental, amateur, and instructional stations at Saladeng. There are also ship stations on Government vessels.

ADMINISTRATION.

The law and regulations under which radiotelegraphy is administered in Siam will be found below.

A—Radiotelegraph Act, B. E. 2457 (1914).

B—Notice concerning the opening of Radiotelegraphy for Public Service, B. E. 2462 (1919).

C—Ministerial Regulations relating to the use of Radiotelegraphy, B. E. 2462 (1919).

D—Radiotelegraph Amendment Act August 4th, 1921.

RADIOTELEGRAPH LAW.

A This Law may be cited as "The Radiotelegraph Law, B.E. 2457" (1914).

2. It shall come into force from the date of its publication in the Government Gazette.

COAST AND LAND STATIONS.

3. The right to establish and work radio-stations for telegraphic and telephonic purposes on Siamese soil and on board ships permanently anchored in Siamese territorial waters is an exclusive privilege of the Government.

This privilege shall be reserved to the Department of Posts and Telegraphs in the Ministry of Communications.

4. The Army and Navy may establish and work independently radiotelegraph stations or field apparatus subject to such conditions as may be from time to time sanctioned in writing by the Minister of War or Marine.

Any station established under this section may be opened to public correspondence only under special arrangement with the Department of Posts and Telegraphs.

SHIP STATIONS.

5. No merchant ship under the Siamese flag shall establish or work any radiotelegraph or telephone apparatus without a license from the Minister of Communications.

The Minister of Communications shall not grant such license until he has been satisfied that the apparatus can work in accordance with the provisions of the International Radiotelegraph Convention of London, 5th July, 1912, and will be handled by qualified operators.

Such license shall be for such time and subject to such conditions as the Minister of Communications may deem good.

6. No ship, whether under the Siamese or a foreign flag, excepting ships of war, is allowed while in Siamese territorial waters to send a message by means of her radiotelegraph apparatus when and where such message can be forwarded by the Government system, either with or without wires, except for the purpose of transmitting messages to or from a ship in distress.

* Sometimes spelt "Singora."

SECRECY.

7. No person or persons engaged in or having knowledge of the operation of any radio-station shall disclose the contents of any message transmitted or received by such station for the purpose of transmission, except to the person to whom the same may be directed or his authorised agent, or to another station employed to forward such message to its destination, or in obedience to the directions of a Court of competent jurisdiction.

PENALTIES.

8. Whoever establishes or works any apparatus contrary to the provision of Sections 3 and 6, or in excess of the conditions laid down under Section 4 of this Law, shall be punished with imprisonment not exceeding six months or fine not exceeding five hundred ticals or both.

The captain or master of a ship, and the person directly responsible for the offence, if any, shall both be liable to punishment for every infringement of the provisions of Section 6.

9. Any person infringing Section 5 of this law shall be punished with fine not exceeding one hundred ticals.

10. Upon the conviction of any person of an offence under the foregoing sections, the Court may order the forfeiture of any apparatus used for the commission of such offence.

11. Any person injuring apparatus or committing any act of mischief to a radiotelegraph station lawfully established, or doing anything to prevent or intended to prevent the transmission or delivery of any radiotelegraph message by any such station, shall be guilty of an offence under Section 196 of the Penal Code.

12. Whoever commits any offence against Section 7 of this Law shall be punished under Section 279 to 281 of the Penal Code.

EXECUTION.

13. The Minister of Communications shall have charge and control of the execution of this Law.

It shall be lawful for him to frame regulations and to fix the scale of fees for land, coast, and ship charges in the transmission of messages by radiotelegraphy or telephony, as well as for licences under Section 5.

It shall also be lawful for him to frame regulations about the qualifications required from operators.

All such regulations shall be in accordance with the detailed Service Regulations appended to the International Radiotelegraph Convention.

Such regulations, on being sanctioned by His Majesty and published in the Government Gazette, shall be deemed to be part of this Law.

Given on the 24th day of April, B.E., 2457 (1914), being the 1,261st day of the Present Reign.

BY THE KING'S MOST EXCELLENT MAJESTY.

Whereas His Majesty's Government has always reserved to itself the exclusive right to establish and work means of telegraphic and telephonic communications throughout Siam;

And whereas apparatus for wireless telegraphy has now been devised practicable for use by land and sea;

And whereas it is desirable that ships under the Siamese flag, more specially passenger carriers, should be equipped with such apparatus, worked under proper regulations, for the greater safety of life at sea;

And whereas the regulations necessary to insure the proper and efficient working of wireless telegraphic stations must conform in all respects with the provisions of the International Radiotelegraph Convention of London, 1912, to which His Majesty's Government has been a party;

Therefore His Majesty has been pleased to enact the following law:—

NOTICE CONCERNING THE OPENING OF RADIOTELEGRAPHY FOR PUBLIC SERVICE.

Dated 22nd May, 1919.

By view of the progress made in commerce and trade in this country, it is considered that the use of Radiotelegraphy which was originally established by the Royal Government for its own use should be extended to general public.

The Ministry of Communications having submitted these facts before His Majesty the King, has now obtained the Royal Permission that the Naval Radiotelegraphic stations in Bangkok and at Singora (Songkhlâ) should be open to public use from the 1st June, 1919.

The public radiotelegraphic service will be under the management of the telegraph officials of the Post and Telegraph Department, who will receive and despatch radiotelegraphic telegrams in a similar manner to the despatch of other telegrams in the Kingdom.

Senders of radiotelegraphic messages should write clearly the words "Wireless Telegraph" on the upper left-hand corner of the form supplied, before the names of the persons for whom the messages are destined.

(Sd.) 1st Grand Councillor,
Chao Phya Wongsa Nuprabadh,
Minister of Communications.

MINISTERIAL REGULATIONS FOR THE LICENSING OF RADIOTELEGRAPHY UPON SHIPS, THE ISSUING OF CERTIFICATES OF COMPETENCY TO RADIOTELEGRAPH OPERATORS, THE FIXING OF FEES FOR SUCH LICENSES AND CERTIFICATES AND THE FIXING OF FEES FOR LAND, COAST AND SHIP CHARGES IN THE TRANSMISSION OF MESSAGES BY RADIOTELEGRAPHY.

C Whereas under Sections 5 and 13 of the Radiotelegraph Law, B. E. 2457, the Minister of Communications is empowered to license the establishment and working of radiotelegraph apparatus upon merchant ships under the Siamese Flag, to frame regulations about qualifications required from operators and to fix the scale of fees for land, coast and ship charges in the transmission of messages by radiotelegraphy, such Regulations, on being approved by His Majesty and published in the Government Gazette to be deemed to be part of the Law.

It has now pleased His Majesty the King to authorise the Minister of Communications to issue the following Ministerial Regulations:—

1. The operation of radiotelegraph stations upon any merchant ship under the Siamese Flag must conform to the provisions of the International Radiotelegraph Convention of London, July 5th, 1912, the detailed Service Regulations appended to the said International Radiotelegraph Convention, the Radiotelegraph Law, B. E. 2457 and any amendments and alterations which may be made therein, and the regulations from time to time issued by the Minister of Communications under the authority of said Radiotelegraph Law, B. E. 2457.

2. No person shall work the radiotelegraph upon any merchant ship within Siamese territorial waters in such a way as to interrupt or interfere with

(*a*) Naval or military signalling.

(*b*) The transmission of messages between other radiotelegraph stations lawfully established.

3. Before the installation of any radiotelegraph apparatus upon any merchant vessel under the Siamese Flag, an application shall first be filed with the Minister of Communications, according to Form A of Schedule I, attached hereto. If the Minister of Communications is satisfied that the apparatus described in said application, will, when installed, be capable of working in accordance with the requirements of Section 4 (*a*) of these Regulations, an installation licence will be issued according to Form B. of said Schedule I. When the installation is completed, the applicant shall notify the Minister of Communications, who, thereupon, will cause an inspection to be made. If this inspection is satisfactory, the Minister of Communications will issue a ship license according to Form C, and subject to the conditions therein contained. Such ship license shall be good until March 31st after its date, but may be renewed within one month immediately after the expiration of the period for which it was issued. Such installation licenses and ship licenses shall be executed in duplicate, one copy to be retained by the Ministry of Communications and the other given to the licensee.

4. The Minister of Communications shall not grant such ship license unless he is satisfied that—

(*a*) the radiotelegraph apparatus can be worked in accordance with the provisions of the International Radiotelegraph Convention of London and the detailed Service Regulations appended thereto, and that,

(*b*) operators qualified in accordance with the provisions of these Regulations and who are the holders of the certificates provided for herein will be employed to work the same.

5. A separate license is required for each ship belonging to the same owner.

6. The fee for the issuance of each ship license shall be 5 Bahts and a fee of the same amount shall be charged for each renewal thereof.

7. No person shall work a radiotelegraph on board any merchant ship under the Siamese Flag unless he holds either a first or second-class certificate of competency granted by the Minister of Communications.

8. The Minister of Communications shall grant certificates of competency in accordance with the conditions contained in the second Schedule to these Regulations.

9. Should a holder of a certificate of competency granted under these rules be proved to the satisfaction of the Minister of Communications wilfully or negligently to have failed to comply with the provisions of the International Radiotelegraph Convention of London, July 5th, 1912, the detailed Service Regulations appended thereto, the Radiotelegraph Law, B. E. 2457 or the Regulations issued by the Minister of Communications, or any amendments or modifications of any of these or any other Regulations which may be issued from time to time for his guidance, the Minister of Communications may cancel the certificate.

10. The Minister of Communications or any officer authorised by him may require the holder of a certificate of competency to produce the same for cancellation under Regulation 9, and the holder must comply with such requisition.

11. Nothing in these Regulations shall apply to the use of the radiotelegraph for the purpose of making or answering signals of distress.

12. Rates for messages transmitted to or received from ship stations, shall be as follows :—

Coast station transmitting or receiving charge for radiotelegrams to or from ships, 20 satangs (0.40 francs) per word with a minimum charge of 2 Bahts (4.00 francs).

Land charges for the receipt or transmission of radiotelegrams over the Inland Telegraph System shall be those provided in the published tariff for inland messages. Land charges shall in addition include the actual expenses of postage or carriage, if the message is to be delivered outside of established telegraph districts.

Charges for relaying messages outside of Siam shall be fixed in accordance with published international tariffs.

These rates may be modified or supplemented and rates fixed for the charges at ship stations by the Minister of Communications.

SCHEDULE I.

Conditions and Forms of application for License to instal Radiotelegraph Apparatus on ships Installation License, and Ship License.

I.

Application for installation licenses shall be made according to the following form :—

FORM A.

Date......................

I,.........................of.........................the owner of the ship............ do hereby make application for permission to instal upon said ship apparatus for radiotelegraphy according to the following specification :

SPECIFICATION.

Name of Ship.	Normal range of Signalling in Nautical Miles		Character of Apparatus		Power			If Alternator is used, Number of Cycles per second
	by day	by night	Description of Receiving Appar'tus	Wave-length in Metres	Source and Maximum Output	Maximum taken by Transmitting Instruments. Current	Voltage	
1	2	3	4	5	6	7	8	9

The above described apparatus will be installed in..........months.

Signed......................

II.

License for installation of Radiotelegraph Apparatus upon ships shall be according to the following form :—

FORM B.

License for installing Radiotelegraph Apparatus.

Whereas.................of...............has filed with the Ministry of Communications his application dated...............for the installation of radiotelegraph apparatus upon the ship...............

Now the Minister of Communications does hereby license and permit the installation upon the said ship within the period of........months from date of radiotelegraph application in accordance with the following specification :

Name of Ship.	Normal range of Signalling in Nautical Miles.		Character of Apparatus		Power			If Alternator is used, Number of Cycles per second
	by day	by night	Description of Receiving Appar'tus	Wave-length in Metres	Source and Maximum Output	Maximum taken by transmitting Instruments. Current	Voltage	
1	2	3	4	5	6	7	8	9

This license and permission does not permit the licensee to operate said apparatus above described until after its inspection when installed and the issuance of a ship license.

Signed.........................
Minister of Communications.

III.

The ship license provided for in Regulation 3, shall be in the following form and subject to the following conditions :—

FORM C.

Know all men by these presents that, whereas..........of................hereafter called the "licensee," is desirous of establishing, maintaining and working on the ship.......... belonging to the licensee, radiotelegraphy under Section 5 of the Radiotelegraph Act, B. E. 2457 ;

And whereas the licensee has agreed and by the acceptance of this license, does become bound to operate and maintain the radiotelegraph installation for which this license is granted in accordance with the International Radiotelegraph Convention of London of July 5th, 1912, the detailed Service Regulations appended thereto, the Radiotelegraph Law, B. E. 2457, and the Regulations thereunder by the Minister of Communications, and any and all amendments and modifications of any of these, which may be made from time to time ;

Now the Minister of Communications hereby grants to the licensee during the term or period commencing with the date hereof and terminating on the 31st day of March, B. E. 24....(19), licence and permission ;

(1) To establish, maintain and work for the purpose hereinafter mentioned upon the ship ....but subject in all respects to the provisions of said International Radiotelegraph Convention of London, July 5th, 1912, to the Service Regulations appended thereto, the Radiotelegraph Law of B. E. 2457, and the Regulations issued by the Minister of Communications, and all amendments and modifications of any of these, apparatus for radiotelegraphy known as the...........system of radiotelegraphy.

(2) To transmit and receive messages by means of the licensed apparatus between the said ship and coast stations and other ship stations ;

(3) To receive money or other valuable consideration for or in respect to the use of the licensed apparatus or for or in respect of the transmission or receipt of messages by means of the said apparatus, according to the schedule of charges fixed in the Regulations or by the Minister of Communications.

And it is hereby declared that the said license and permission is granted upon and subject to the following further conditions and provisions :—

(1) The licensed apparatus shall not be used by the licensee or by any other person either on behalf of or by permission of the licensee for the transmission or receipt of any messages except those authorised by this license.

(2) (*a*) The licensee shall not by the transmission of any message by means of the licensed apparatus or otherwise by the use of the licensed apparatus interfere with Naval or Military signalling or with any radiotelegraph station lawfully established.

(*b*) If at any time it becomes apparent that the working of the licensed apparatus upon said ship is inconsistent with the free use of naval or military signalling the licensee shall when required so to do by the Minister of Communications close said station upon said ship.

(3) The licensee shall comply with all such directions and observe all such rules and regulations as may be given or made by the Minister of Communications from time to time for the purpose of preventing interference with the working of any other radiotelegraph station and for enabling the messages exchanged by means of the licensed apparatus, to be distinguished from those emanating from any other radiotelegraph station.

(4) The licensee shall at all times indemnify His Majesty's Government, the Minister of Communications and the Department of Posts and Telegraphs against all actions, claims and demands which may be brought or made by any corporation, company or person in respect of

any damage arising from any act licensed or permitted by these presents.

(5) Subject to the provisions of this license, the licensee shall transmit messages by means of the licensed apparatus on equal terms without favour or precedence whether as regards rates of charge, order of transmission or otherwise, except that preference shall be given to messages transmitted on behalf of His Majesty or of His Majesty's Government.

(6) The licensee shall so far as possible receive from ships and light stations all requests for assistance and all signals of distress and shall answer such requests and signals and retransmit them with the least possible delay to the proper authorities by means of the licensed apparatus, or any other means in the power of the licensee.

(7) The licensed apparatus shall be worked only by a person holding a certificate of competency issued by the Minister of Communications.

(8) The licensee shall not divulge to any person other than properly authorised officials of His Majesty's Government or make any use whatever of any message coming to the knowledge of the licensee through naval or military signalling.

(9) The licensee shall keep such accounts records and registers of all messages transmitted by means of the licensed apparatus as the Minister of Communications may from time to time require and such accounts, records and registers shall be open to the inspections of the Minister of Communications or his duly authorised representative at all reasonable times.

(10) The Minister of Communications or his duly authorised representative may at all reasonable times enter upon said ship for the purpose of inspecting and may inspect any apparatus fixed or being in such ship for the purpose of sending and receiving messages by radiotelegraphy, and the method of working such apparatus.

(11) The Minister of Communications may at any time by notice in writing but without assigning any reason revoke and determine this license and thereupon this license shall determine and become absolutely void.

(12) Any notice, request or consent (whether required to be in writing or not) to be given by or on behalf of His Majesty's Government or by the Minister of Communications or the Director-General of the Post and Telegraph Department, may be served by sending the same in a letter addressed to the licensee at the office for the time being of the licensee, or by delivery to the master of the ship upon which the licensed apparatus is installed and any notice to be given by the licensee under these presents may be served by sending the same in registered letter addressed to the Minister of Communications.

Signed and delivered by................

Minister of Communications.

SCHEDULE II.

Conditions and Forms for the Granting of Certificates of Competency.

(1) Certificates of competency as to radiotelegraph operators on board merchant ships under the Siamese Flag, shall be granted by the Minister of Communications, subject to an examination and shall be in accordance with Form B. appended hereto. Such certificates shall indicate the system or systems of radiotelegraphy in which the examination was conducted, and shall certify that the holder:

(*a*) in the case of first-class certificates is able to send and receive, by sound, messages in plain language in the International Morse Code at a rate of not less than 20 words per minute (five letters being counted as one word); or

(*b*) in the case of second-class certificates is able to send and receive by sound, messages in plain language in the International Morse Code at a rate of from 12 to 19 words per minute (five letters being counted as one word); and

(*c*) is able to adjust the apparatus ordinarily used in some well-known system of radiotelegraphy so as to suit the varying conditions of working without using excessive transmitting power; and

(*d*) has an efficient working knowledge of the regulations applicable to the exchange of the radiotelegraphic traffic.

(2) Candidates for examination shall fill up an application according to Form A attached hereto, and submit the same to the Minister of Communications at Bangkok.

(3) Upon being notified that he has successfully passed the examination each candidate shall supply two photographs of himself, one of which will be attached to the certificate of competency, and the other to the duplicate of the certificate which is retained by the Minister of Communications. These photographs will be signed by the candidates and stamped by the issuing officers in such a way as to prevent substitution.

(4) A fee of 10 Bahts will be charged for each examination and an additional fee of 10 Bahts for the certificate issued to a successful applicant.

(5) Each certificate shall be good for five years and may be renewed at the expiration of that period for a like period of five years. Such renewal may be without re-examination if the applicant has been engaged in the actual transmission and receipt of radiotelegrams during at least three of the preceding five years. Otherwise an examination will be required. The fees for renewal examinations and the issuance of renewal certificates are the same as for the original examination and issuance.

(6) If the candidate satisfactorily passes the examination, he shall make a declaration that he will observe the secrecy of radiotelegrams which come to his knowledge in the course of duty.

FORM A.

Application for examination for a.......... class certificate of competency as a radiotelegrapher.

1. Name ....
2. Residence ....
3. Date and Place of Birth..........
4. Nationality -....................
5. System of radiotelegraph in which applicant wishes to be examined

....

The undersigned applicant for examination for a certificate of competency as a radiotelegrapher agrees that, if successful, he will observe all requirements, so far as they may apply to him, of the International Radio-Convention of London, July 5th, 1912, the detailed Service Regulations appended thereto, the Radiotelegraph Law, B. E. 2457, the Regulations used in pursuance thereof, and all amendments and modifications of any of these, which may be issued from time to time.

THE RADIOTELEGRAPH AMENDMENT ACT.

BY THE KING'S MOST EXCELLENT MAJESTY.

D Whereas the authority conferred upon the Minister of Communications by virtue of Article 13 of the Radiotelegraph Act B.E. 2457 is not sufficient to execute and control the Radiotelegraph service.

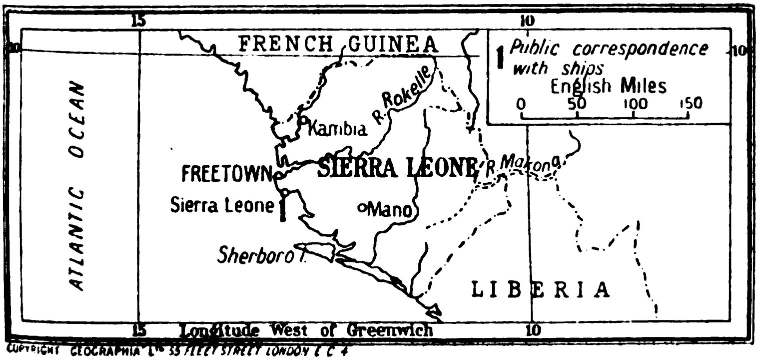
Therefore His Majesty has been pleased to further amend the Radiotelegraph Act B.E. 2457 as follows :—

(1) This Act shall be called the Radiotelegraph Amendment Act 2464.

(2) It shall come into force from the 4th day of August, 1921.

(3) In Chapter VI Article 13 after paragraph 3 of the Radiotelegraph Act B.E. 2457, the following paragraph shall be inserted, namely:

It shall also be lawful for him, whenever he deems expedient, to issue notifications granting temporary permission to ships to send and receive messages by means of their wireless apparatus while in Siamese territorial waters.



Given on the 4th day of August, 1921, being the twelfth year of the Present Reign.

SIBERIA

SIERRA LEONE

SIERRA LEONE proper consists of a peninsula about 26 miles long and 12 miles broad covering an area of about 300 square miles. The Colony, however, is much more extensive, stretching from French Guinea on the north to the Republic of Liberia on the east and south-east, its total area being 4,000 square miles.

The capital is Freetown, and the colonial administration is conducted by a Governor and Commander-in-Chief, assisted by Executive and Legislative Councils. The same officials also administer the "Protectorate," a term

which applies to the territories, not being portions of the Colony of Sierra Leone, lying between 6° and 10° north latitude and 10° and 14° of west longitude.

CONTROL.

A wireless telegraphy station is installed at Freetown, and is owned and controlled by the African Direct Telegraph Company. Mr. A. G. Fuller is the Superintendant in charge.

The regulation of wireless telegraphy rests solely in the hands of the Government. There are no wireless clubs or societies.

ADMINISTRATION.

The Sierre Leone wireless laws and regulations were first formulated in the Decree of 1903, and the Schedule founded thereon. In 1912 this Decree and the regulations in the Schedule were amended by Ordinance No. 19 with the Schedule which was thereto attached. In the following year (1913) these were in their turn replaced by Ordinance No. 11 with its accompanying Schedule, both of which we print below. A set of Regulations issued on July 16th, 1917, has been superseded by an additional set issued on May 12th. 1919, which will be found below.

The list of reprints included here covers :—

A—Ordinance No. 11 of 1913.
B—Schedule dated May 23rd, 1913.
C—Regulation No. 1 of 1919.

An Ordinance to Provide for the Regulation of Wireless Telegraphy.
No. 11 of 1913.

A Be it enacted by the Governor of the Colony of Sierra Leone, with the advice and consent of the Legislative Council thereof as follows :—

1. *Short Title.*—This Ordinance may be cited as the Wireless Telegraphy Ordinance, 1913.

2. *Definition of "Wireless Telegraphy."*—In this Ordinance, "Wireless Telegraphy" means any system of communication by telegraph without the aid of any wire connecting the points from and at which the messages or other communications are sent or received: Provided that nothing in this Ordinance shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

3. *License for Wireless Telegraphy.*—(1) A person shall not establish any wireless telegraph station or instal or work any apparatus for wireless telegraphy in any place or on board any ship registered in the Colony, except under and in accordance with a license granted in that behalf by the Governor.

(2) Every such license shall be in such form and for such period as the Governor may determine, and shall contain the terms, conditions and restrictions on and subject to which it is granted.

4. *Apparatus aboard ships to be worked in accordance with regulations.*—A person shall not work any apparatus for wireless telegraphy installed on any merchant ship, whether British or foreign, while that ship is in the territorial waters of the Colony, otherwise than in accordance with regulations under this Ordinance.

5. *Regulations.*—(1) The Governor may from time to time make regulations for carrying into effect the purposes of this Ordinance.

(2) *Schedule.*—The regulations in the Schedule to this Ordinance shall have effect except in so far as they may be amended or rescinded by regulations made under the authority of this section.

(3) If at any time, in the opinion of the Governor, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships while in the territorial waters of the Colony shall be subject to such further regulations as may be made by the Governor from time to time, and such regulations may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

6. *Search Warrant.*—If a Magistrate is satisfied by information on oath that there is reasonable ground for suspecting that a wireless telegraph station has been established without a license in that behalf or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any merchant ship without a license in that behalf or contrary to the provisions of any regulations made under this Ordinance or of any license granted under this Ordinance, he may grant a search warrant to any superior Officer of Police named in the warrant, and a warrant so granted shall authorise the Officer to enter and inspect the station, place, or ship, and to seize any apparatus which appears to be used or intended to be used for wireless telegraphy therein.

7. *Penalties.*—Any person who shall offend against any provision of this Ordinance or any of the regulations made thereunder shall be liable on summary conviction for every such offence to a fine not exceeding fifty pounds, and upon such conviction the Court may order that any apparatus for wireless telegraphy in connection with which the offence was committed shall be seized and forfeited.

8. *Repeal No.* 22 of 1903, *No.* 19 of 1912.—The Wireless Telegraphy Ordinance, 1903, and the Wireless Telegraphy Amendment Ordinance 1912, are hereby repealed.

SCHEDULE—SECTION 5 (2).
REGULATIONS.

B 1. All apparatus for Wireless Telegraphy on board a merchant ship in the territorial waters of the Colony shall be worked in such a way as not to interfere with

(*a*) Naval signalling, or
(*b*) the working of any wireless telegraph station lawfully established, installed or worked in the Colony or the territorial waters thereof, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

2. In these Regulations, "Naval signalling" means signalling by means of any system of wireless telegraphy between two or more ships of His Majesty's Navy, between ships of His Majesty's Naval Stations or between a ship of His Majesty's Navy or a Naval Station and any other wireless telegraph station whether on shore or on any ship.

3. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used while such ship is in any harbour or bay of the Colony except with the special or general permission of the Governor.

4. For the purpose of any proceedings under these regulations the master or person being or appearing to be in command or charge of any ship shall be deemed to have authorised and to be responsible for the use or working of any apparatus on board such ship.

5. Any summons or other document in any proceedings under these regulations shall be deemed to have been duly served on the person to whom the same is addressed by being left on board the ship on which the offence is charged to have been committed with the person being or appearing to be in command or charge of the ship.

6. These regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

Passed in the Legislative Council this twenty-third day of May in the year of our Lord, one thousand nine hundred and thirteen.

REGULATIONS (No. 1 OF 1919) MADE UNDER SUB-SECTION (1) OF SECTION 5 OF THE WIRELESS TELEGRAPHY ORDINANCE, 1913 (No. 11 OF 1913).

C Whereas by sub-section (1) of section 5 of the Wireless Telegraphy Ordinance, 1913 (No. 11 of 1913), it is provided that the Governor may from time to time make regulations for carrying into effect the purposes of the Ordinance:

And whereas by sub-section (2) of section 5 it is provided that the regulations made and passed by the Legislative Council, 23rd day of May, 1913, shall have effect except in so far as they shall be amended or rescinded by regulations made under the authority of the section:

And whereas by regulations made the 16th day of July, 1917, certain of the above recited regulations were rescinded and other regulations were substituted therefor:

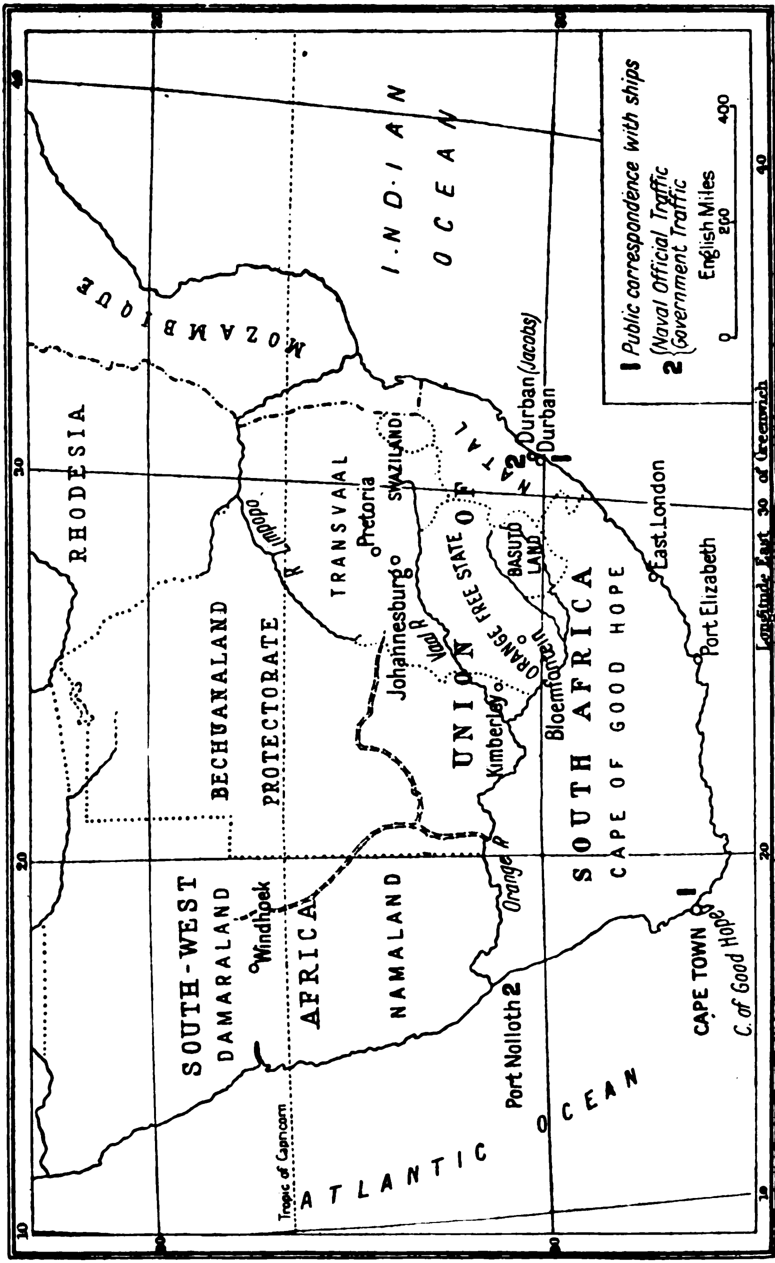
And whereas I am minded to make other provision in lieu of the last above recited regulations:

Now, therefore, under and by virtue of the power and authority in that behalf vested in me it is ordered that the regulations made the 16th day of July, 1917, are hereby rescinded and the following substituted therefor:—

1. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used while such ship is in any harbour or bay of the Colony except with the special or general permission of the Governor.

2. These regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

Made this 12th day of May, 1919.



SOLOMON ISLANDS

(See map on p. 424.)

SOUTH AFRICA (UNION OF)

THE Union of South Africa lies between 22° and 34° 50′ south latitude and 16° 30′ and 32° 40′ east longitude. Its total superficial area, not including the Protectorates of Bechuanaland, Basutoland, and Swaziland, which are included within the same geographical boundaries, but do not form part of the Union, is 473,075 square miles. The coast line extends from the mouth of the Orange River on the west coast to a point in latitude south 26° 30′ on the east coast, and measures about 1,725 miles. The greatest distance east to west is a little under 900 miles, and north to south a little over 1,800 miles. At the last complete census, taken in 1911, the population was 1,276,242 Europeans, 4,019,006 natives, and 678,146 other coloured races. On May 5th, 1918, a census of the European population was taken. The preliminary unaudited result of the census shows that there were 730,179 males and 694,511 females, exclusive of persons absent on active service or work in connection with the war. The Union was constituted on May 31st, 1910, under the South Africa Act of 1909, and embraces the former separate self-governing colonies of the Cape of Good Hope, the Transvaal, the Orange Free State, and Natal.

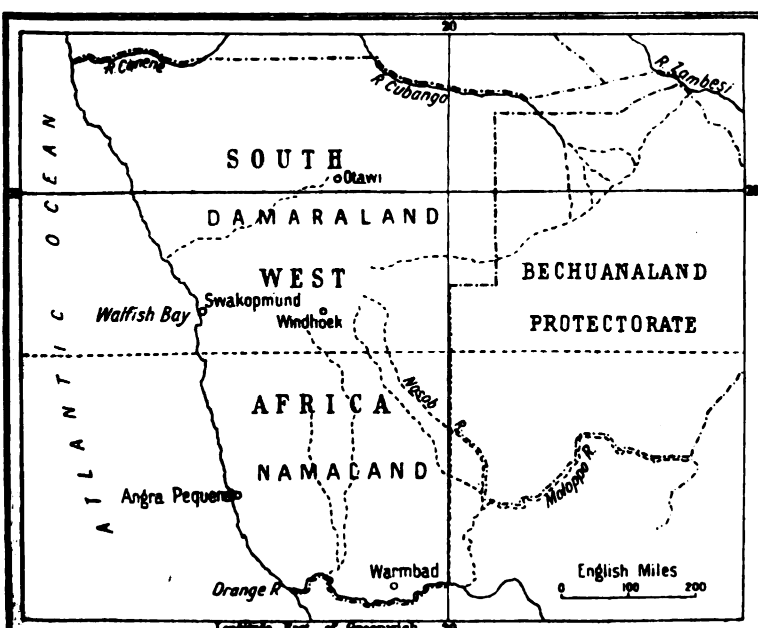
The Executive Government is vested in a Governor-General appointed by the Crown, aided by an Executive Council of Union Ministers, with two Houses of Legislature.

Port Nolloth and Durban (Jacobs) now closed. Port Elizabeth open for public general correspondence.

CONTROL.

The administration of radiotelegraphy is in the hands of the Postmaster-General. It is directed by the Engineer-in-Chief of Posts and Telegraphs, and is not treated as a separate unit.

For Colonies working under the direction of the High Commissioner of South Africa (e.g., *Basutoland, etc.*)*—see under their own names.*



OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	*Title.*	*Address.*
Mr. H. W. S. Twycross	Postmaster-General	Pretoria
Major E. A. Sturman, C.B.E.	Secretary to the General Post Office	Pretoria
Lt.-Col. N. Harrison, C.M.G., D.S.O., M.I.E.E.	Engineer-in-Chief	Pretoria
Mr. J. H. Weaver, C.B.E.	General Traffic Superintendent of Telegraphs	Pretoria

ORGANISATION.

There are three wireless stations in South Africa, under the control of the Union Government. The first was established at Durban in June, 1910, another at Slangkop, near Cape Town, in May, 1911, and a third at Port Elizabeth, in April, 1921. In September, 1913, it became necessary in connection with the port defences to remove the Durban station from the position where it had been originally erected to a point some four miles distant. The change of situation has not adversely affected its efficiency.

There are no privately owned stations, and in regard to private experimental wireless stations, licenses are only issued in very exceptional circumstances.

The latest available statistics are as follows :—

Land stations for public service to ships	..	3
Ship stations on privately owned vessels	..	2 (low power)
Ship stations on railway owned vessels	..	3 (low power)

ADMINISTRATION.

The only statutory regulation on radiotelegraphy within the Union is that contained in the preamble to the Post Office Act, and Section 80 *ibid.*, both of which will be found below.

No licenses in terms of the section of the P.O. Act of 1911 are being issued under present conditions, and there are no private licensees for radiotelegraphy in existence except four in respect of certain ships. The license follows the same lines as that issued in Great Britain.

There is no Union Act compelling ships trading in South African waters to be fitted with radiotelegraphic apparatus.

A—Statutory Regulation (Preamble to P.O. Act, 1911).
B—Section 80 of Post Office Act, 1911.
C—Conditions of issue of Amateur License.

POST OFFICE ADMINISTRATION AND SHIPPING COMBINATION DISCOURAGEMENT ACT, 1911.

CHAPTER V.—SECTION 1.

A In this Act, unless inconsistent with the context, "telegraph" shall include "telephone," and shall mean any system or means of conveying signs, signals, sounds, or communications, by the agency of electricity, magnetism, electro-magnetism, or by any agency of a like nature, whether with or without the aid of wires, and shall include the system commonly known as wireless telegraphy, or ætheric signalling, and any improvements or developments of that system.

"Telegraph line" shall include any apparatus, instrument, pole, mast, standard, wire, pipe, tunnel, pneumatic or other tube, thing, or means whatever, which is or may be used in connection with or for the purpose of sending, transmitting, conveying, or receiving telegraphic signs, signals, sounds, or communications.

1. The Postmaster-General shall have the exclusive privilege of constructing and maintaining telegraph lines and of transmitting telegrams or other communications by telegraph within the Union or the territorial waters thereof and of performing all the incidental services of receiving, collecting, or delivering telegrams or other such communications: Provided that—

(*a*) the owners of any system of railways may maintain and work for the purposes of any such railway, for the time and to the extent authorised by any law, any telegraph lines constructed in pursuance of rights conferred by that law; and

(*b*) the Postmaster-General may construct, maintain, or lease telegraph lines for private use or may, by license, authorise any person to construct, maintain, and work private telegraph lines within the Union or its territorial waters and may prescribe the fees and conditions therefor.

POST OFFICE ADMINISTRATION ACT, 1911.

B 80. (1) The Postmaster-General shall have the exclusive privilege of constructing and maintaining telegraph lines and of transmitting telegrams or other communications by telegraph within the Union or the territorial waters thereof and of performing all the incidental services of receiving, collecting, or delivering telegrams or other such communications: Provided that—

(*a*) the owners of any system of railways may maintain and work for the purpose of any such railway, for the time and to the extent authorised by any law, any telegraph lines constructed in pursuance of rights conferred by that law; and

(*b*) the Postmaster-General may construct, maintain or lease telegraph lines for private use or may, by license, authorise any person to construct, maintain, and work private telegraph lines within the Union or its territorial waters and may prescribe the fees and conditions therefor.

(2) No telegraph line shall be used for the purpose of transmitting or delivering telegrams for the public except by the authority of the Postmaster-General and upon such terms and conditions as he may prescribe, and the department shall have the right, by means of its officers, of inspecting all offices which are authorised to accept, transmit, or deliver public telegrams.

CONDITIONS OF ISSUE OF AMATEUR LICENSE.

PROCEDURE TO BE FOLLOWED.

C The applicant should furnish :—

1. Evidence of his British nationality and two written references by persons of standing, who are British subjects and not related to the applicant.

2. His full Christian names and particulars of his occupation.

N.B—If the applicant is a minor, the authority to use wireless apparatus can only be issued in the name of his parent or guardian, who should comply with the requirements and state his (or her) full address and relationship (if any) to the applicant. There is no objection to a minor working the authorised apparatus as the agent of his parent or guardian.

3. A remittance of 10s.

4. A description of the apparatus which it is proposed to instal and, if authority is desired for the use of thermionic valves, a diagram of the circuits in which they would be used.

5. A sketch showing the form, height and dimensions of the proposed aerial (including leading-in wires).

N.B.—Extreme height of aerial above ground 100ft. Total length of wire including leading-in wires.

100 feet for single wire aerial.

140 feet of wire where two or more wires are used, *e.g.*, total length of 70 feet of double wire.

6. The address at which the apparatus would be installed.

7. Satisfactory evidence that he has in view some definite object of scientific value or genera public utility. If scientific research is intended he should be certified as a competent investigator by a Government Department or some recognised scientific body.

8. The name of the person or persons with whose wireless installation it is proposed to communicate, communications beyond a radius of ten miles being forbidden.

9. The installation shall be subject to the approval of the Postmaster-General and to inspection by any of his officers from time to time.

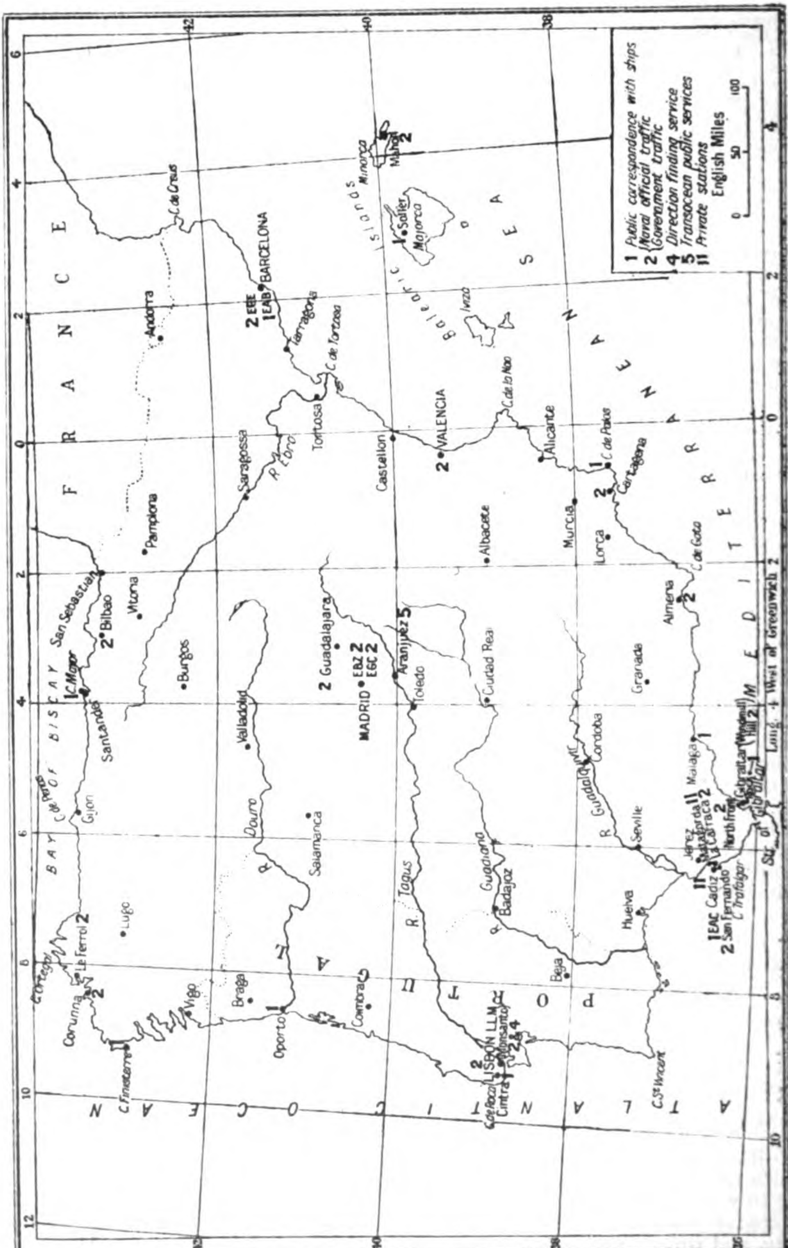
SPAIN

THE present Constitution of Spain after having been drawn up by the Government and laid before a *Cortes Constituyentes* elected for its ratification, on March 27th, 1876, was proclaimed on June 30th of that year. It enacts that Spain shall be a Constitutional Monarchy, the Executive vested in the King, and the power to make laws " in the Cortes with the King." The reigning monarch, Alphonso XIII, belongs to the House of Bourbon, which succeeded to the Spanish throne at the end of the seventeenth century. He married Princess Victoria Eugenie, granddaughter of the late Queen Victoria, on May 31st, 1906.

The territory included under the Spanish administration comprises 49 provinces, 47 in the Iberian peninsula and 2 provinces, namely, Canary and Balearic Islands, and as colonies, Fernando Po Island, the Muni coast and Rio de Oro, and Ceuta and Melilla, in Morocco.

The superficial area of the 47 provinces in the Peninsula is 493,019 sq. km., the area of the Canaries is 7,272.60 sq. km., and the area of Balearic Islands 5,014 sq. km.

CONTROL.



Radiotelegraphy in Spain is a State monopoly, under the control of the Home Office and the Ministry of War and the Navy. The establishment of a wireless public service was granted on June 26th, 1908, to " La Sociedad Española Oerlikon," which was responsible for the erection of 24 land stations having three different ranges. The " Sociedad Española Oerlikon " then formed a company " Compañia Concesionaria del servicio público español de Telegrafia sin hilos," which erected the Cadiz, Tenerife, and Las Palmas stations, but did not complete them. The time granted in the contract having elapsed, the concession was then transferred to the actual holders of it, " La Compañia Nacional de Telegrafia sin Hilos," which was formed with the aid, and under the direction of Marconi's Wireless Telegraph Company, Limited, and at the suggestion of the latter, the original plan was altered and reduced to 10 stations, all of greater range.

Licenses for erecting and working wireless stations by private companies are not granted, except in the case of teaching or meteorological receiving stations. According to the latest statistics the following stations exist :—

Meteorological observatories	4
Official seismological stations	4
Educational stations	7
Stations open for public service to ships	8
Stations open for Government traffic only	13
Stations open for private traffic	2

There are no *experimental* stations and no *amateur* stations.

There is no special form of license, and the general conditions subject to which these licenses are granted can be found in the addition to Article 6 of the Royal Decree of January 24th, 1908, which Article was modified by Royal Decree of July 19th; 1914 , also Article 6 of Royal Decree of February 8th, 1917, and Royal Decree of January, 1920.

New station opened at North Front (Gibraltar).

Officials Controlling Wireless Telegraphy.

Official.	*Title.*	*Address.*
Excmo. Sr. Conde Coello de Portugal..	Home Minister	P. Prado 3
Excmo. Sr. D Juan Lacierva	War Minister	Alphonso XII 50
Excmo. Sr. Morgues Cotina	Navy Minister	Jorge Juan
Excmo. Sr. Condedo Colombi	Director-General of Posts and Telegraphs	Hotel Ritz
Sr. Don Tomas Aguilar	Sub-Director of Telegraphs ..	Imperial 2
Sr. Don Augusto Boyer	Head of Radio Service	Alcalá 133

The only company holding permission to work wireless for public service is the " Compañia Nacional de Telegrafia sin Hilos."

The companies engaged up to the present in erecting wireless stations are the following: La Compañia Nacional de Telegrafia sin Hilos (Marconi system), A.E.G. Thomson-Houston Ibérica (Telefunken), La Compañia Ibérica de Telecomunicación, Centro Electrotécnico (Army Department), and Military engineers (for military purposes).

ORGANISATION.

Radiotelegraphy has from its initiation in practice, attracted much attention and interest in the Iberian Peninsula.

As early as 1899 commissions were appointed in Spain which, from time to time, issued reports to their Government on the subject of Wireless Telegraphy. As a result, a Royal Decree of May 21st, 1905, appointed a permanent commission, presided over by the Chief of the General Staff and including representatives of the War Office, Admiralty and Home Office, thus anticipating the first International Conference concerning Wireless Telegraphy—*i.e.*, the one held in Berlin, 1906 (subsequently modified by the London International Convention of 1912).

Very little was actually done in regard to the erection of wireless telegraphic installations before 1906. Trials with unsatisfactory results had been carried out by the Army with field sets, and the Navy with stations on board the *Pelayo, Princesa de Asturias*, and *Giralda*. In regard to aviation, there is a project to instal several stations on the aerial line of Toulouse-Rabat. The station at Prat de Llobregat is already handling traffic for this line. At Alicante another station has been installed for meteorological service and aviation. The lines of Madrid-Larache and Cantabrico (Postal Aviation) is also to be equipped with several radiotelegraphic stations.

A commission is setting out to study the establishment of various stations on the coast of Spain for Radiogoneometric Service, but up to the present it has not determined the sites of these stations.

For the service of lighthouses two radiotelegraphic-telephonic stations have been installed at Castellon and Columbretes, and tenders have been invited for the equipment of various other lighthouses, amongst which are Cabos Villano and Finisterre.

ADMINISTRATION.

Spain is one of the signatories of the important " Safety of Life at Sea " Convention, and has become a party to all the international agreements affecting radiotelegraphy. She has, moreover, passed separate laws and regulations framed with the object of establishing and developing this applied science in the home country and in her dependencies.

In the course of 1917 an important Royal Order was published by the Ministry of Marine, enacting that every merchant vessel of 500 tons and over must instal wireless telegraphy. The text of this Order will be found below together with the following current Rules and Regulations.

A—Law of October 26th, 1907.
B—General Rules, January 24th, 1908.
C—Regulations, January 24th, 1908.
D—Royal Order of September 4th, 1914.
E—Royal Decree dated February 20th, 1917.
F—Royal Order of June 22nd, 1917.
G—Decree dated October 12th, 1917.
H—Royal Decree of February 8th, 1917.
I—Convention of Madrid, dated June 17th, 1918 (as modified on June 4th, 1919).
J—Royal Decree of January 18th, 1920.

LAW OF OCTOBER 26TH, 1907.

THE GOVERNMENT OF SPAIN IS HEREBY AUTHORISED TO ESTABLISH AND DEVELOP THE WIRELESS, CABLE AND TELEPHONE SERVICES.

A H.M. Don Alfonso XIII, by the grace of God and by the Constitution, makes it known by these presents that Parliament has decreed and he, the King, has given his Royal assent to the following :—

ART. 1.—The Government is hereby authorised to establish and develop the wireless, cable and telephone services—availing itself of the co-operation of national institutions—by means of a Royal Order which will be published within four months from the promulgation of this law.

ART. 2.—The expenses entailed by each service will be covered by the takings of the concession itself. In the case of certain concessions, the proviso is reserved that the establishment may be taken over by the State in whole or part, by Royal Decree, should the so doing be considered as in the national interests.

ART. 3.—Concessions regarding these new services will be granted by public tender, and all necessary conditions must be fulfilled in order to safeguard the interests and security of the nation.

It is therefore decreed :

That all tribunals, magistrates, prefects, governors and all persons in authority, whether civil, military or ecclesiastical, whatever their rank and dignity, must obey and see to it that this law is observed in all its parts.

Given at the Royal Palace on October 26th, 1907.

GENERAL RULES.

PROMULGATED BY ROYAL DECREE AS THE BASIS FOR THE ESTABLISHING OF WIRELESS SERVICE IN SPAIN.

B ART. 1.—The establishing and exploitation of all systems and apparatus available for the so-called "Hertzian telegraphy," "etherial telegraphy," and "radiotelegraphy," and all similar processes already invented or which may be invented in the future, shall be considered as included among the State monopolies regarding all means of electrical communications.

ART. 2.—The establishing and exploitation of the above telegraphic systems shall be controlled by (1) the Minister of the Interior in all matters appertaining to the general civil applications of the said systems, and (2) by the Ministers of War and Marine when and where those applications are specially connected with national defence and with the army and navy.

ART. 3.—All other official departments requiring a radiotelegraphic service can erect wireless installations by previous agreement with the Minister of the Interior. Such installations will be under the regulations established for the regular wireless service and wireless experiments.

ART. 4.—No experiments with the above-mentioned systems can be instituted in the Peninsula, or in the Balearic and Canary Islands, or in Spain's African possessions, without the authority of the Ministers of War, Marine or Interior, according to the kind of experiment which it may be proposed to carry out. Such experiments and trials shall be carried out under the official inspection of the respective departments responsible, excepting only those of a technical character carried out by the personnel of the scientific institutions of the State. These shall be independent of the said departments, providing they adhere to the regulations laid down.

ART. 5.—The Minister on whose authority the above installations and experiments are established and effected must give notice thereof to the other Ministers, giving them also full particulars regarding their service and conditions.

ART. 6.—Acting in agreement with the Ministers of War and Marine, in the cases herein aforesaid, and acting independently in all other cases, the Minister of the Interior can authorise the installation of wireless stations, provided that none have been officially installed, when the said installations may have been applied for by individuals, societies, corporations or national institutions, subject to the following rules :—

(1) The applicant shall address himself in the first instance to the Minister of the Interior, stating clearly the place where the installation is to be erected, and supplying a plan of the building, together with the conditions and advantages of the locality.

(2) Such installations and the services they are expected to render shall be subject to the special rules and conditions laid down in each case, and to the general regulations established by the State for its own installations and wireless service.

(3) The Government shall have the right to close the service under extraordinary circumstances affecting the safety of the State and the maintenance of public order.

(4) The Government shall also have the right to acquire by purchase, whenever it may be considered convenient, and with the previous payment of an indemnity, the wireless installations hereinbefore mentioned and the valuation for such compensation shall take into consideration the actual condition of the material and of the installation itself.

(5) The concessionaire shall let the Minister of the Interior know, in good time, the date on which the station or stations will start working, in order to allow the personnel of the telegraph office the necessary time for their nspection.

(6) The petitioner must not consider himself entitled to proceed with the work of installatiom until the necessary authorisation has been granted.

The following rules were added by Decree of July 10th, 1914.

(7) If the stations are to be fitted up merely for the reception of messages and for scientific purposes, or to serve as auxiliaries to meteorological observatories, authorisation for the same can be obtained from the Minister of the Interior, provided that the application be made by an Official Institution or by a private individual acting with the support of an Official Department.

(8) These receiving stations must be inspected by the Director of Telegraphs of the locality where they are installed.

(9) The persons appointed to carry out the reception must take an oath before the Civil Governor of the Provinces, to keep secret all information they may gather from the radiotelegraphic messages.

ART. 7.—The ships belonging to the national mercantile marine can instal on board wireless stations worked on any of the wireless systems in current use, provided they obtain a special permit to do so from the Minister of Marine, who will grant it in accordance with the conditions established by the International Agreement and Service Regulations adopted in Berlin on November 3rd, 1906.

ART. 8.—Permits to establish wireless installations will not be granted to any private individual, society, or corporation belonging to a foreign nationality.

ART. 9.—Any person or persons exploiting or using clandestinely any system of wireless, or any person or persons attempting to conduct wireless experiments with apparatus available for the purpose, will be prosecuted in conformity with the Penal Code, the general law, the military orders, or the administrative regulations, as the case may be. Prosecution for these offences will be carried out by the authorities entrusted with the administration of the said laws, orders and regulations; and the State will confiscate all material employed for such purposes.

ART. 10.—By agreement between the Ministers of War, Marine and Interior, the wireless stations which may be considered necessary and convenient for commerce, navigation and national defence will be erected on the seaboard of the Iberian Peninsula, on the Balearic and Canary Islands, and in the African possessions of Spain.

These installations will be under the control of the aforesaid three Ministers, as the case may be, both in the matter of supplies and of personnel and offices, and they will form a part of the national telegraphic system.

This linking up of the wireless with the land telegraphic service will be effected by the ministerial department controlling the various wireless installations.

ART. 11.—Authorisation is hereby given for the interchange of messages between ships belonging to the national mercantile marine and those belonging to foreign nations carrying wireless installations of current systems, and also for the interchange of messages between the said ships and the coast stations already established or to be established by the Ministry of the Interior on the sea board of the Peninsula on the Balearic and Canary Islands, and in the Spanish possessions in Africa.

The Minister of the Interior shall determine the date of the inauguration, the extension and the class of service of each station.

ART. 12.—The Government shall have the option of refusing or accepting those wireless systems the details of which have not been made public.

ART. 13.—The State accepts no responsibility for the wireless service. In the cases of errors or of non-delivery of radiotelegrams the procedure followed will be as established in Art. 35 of the Berlin regulations.

ART. 14.—Whatever the object of the installations, the wireless service shall be organised, whenever possible, in such a way as not to disturb other services of the same kind, or class. The ministerial departments interested shall adopt in each case such rules and regulations as may be found necessary, and shall also arrange regulations with other States regarding frontier installations.

ART. 15.—All wireless services, whether public, official, or private, carried on through the intermediary of land, coast and ship stations, shall be subject to the regulations hereunto attached.

ART. 16.—In addition to the rules herein contained, and those of the regulations mentioned in the previous Article, the provisions affecting Radiotelegraphy contained in the International Convention made in Berlin on November 3rd, 1906, together with the Service Regulations appended thereto, must be observed.

ART. 17.—The Director-General of Posts and Telegraphs shall see to the fulfilment of the stipulations made by Art. 13 of the International Agreement and of those made by Art. 37 of the Berlin Regulations, regarding the International Bureau established in Switzerland. The Ministers of War and Marine shall in accordance thereunto furnish the data required, which must be in the possession of the naval and military installations and stations and also data affecting the merchant ship stations, whose installations are authorised by the Minister of Marine.

ART. 18.—Messages received from or transmitted directly to a country or ship registered in a country which is not a signatory of the convention and regulations of Berlin, can only be admitted through the Spanish telegraphic system and through the coast wireless stations after a declaration has been made by the country in question expressing an intention of applying the rules laid down by the said convention, and their regulations regarding the regular routine of the messages and the security of the accounts. In their radiotelegraphic service the coast stations shall give preference to the service of those countries which have become parties to the international agreements.

Articles 19 *to* 34 *and the additional articles appended thereto deal with wireless installations on fortresses.*

REGULATIONS.

GOVERNING THE WORKING OF THE WIRELESS STATIONS IN SPAIN.

GENERAL SERVICE.

ART. 1.—All persons are allowed to make use of the wireless service, but the Government reserve to themselves the privilege of suspending for an indefinite period, as they may judge convenient, either every class of communication or such commu-

nications as belong to some particular class, or communications which affect some special station or stations.

Art. 2.—The following regulations and conditions laid down for the radiotelegraphic service in Spain, besides the provisions affecting radiotelegraphy contained in the International Convention made in Berlin on November 3rd, 1906, together with the Service Regulations appended thereto, shall be applied to all wireless stations, whether public, official or private, on the coast of the Peninsula, the Balearic and Canary Islands, the African possessions of Spain, and to all ships navigating those territorial waters.

Art. 3.—Ship stations shall be free to select their system of wireless installation; but for coast stations the administration shall adopt the system and equipment judged to be the best available from the point of view of scientific, technical and economic progress.

Art. 4.—All coast wireless stations shall be linked with the general telegraphic system, by means of private lines, in order to secure rapid communications.

Art. 5.—The working of wireless stations of all classes shall be carried out in such a way that, as far as possible, no disturbance may be occasioned to other stations of the same kind.

Organisation of Wireless Stations.

Art. 6.—Wireless stations of all kinds must maintain reciprocal communications with the least possible waste of power.

Art. 7.—Wireless stations in Spain shall use the international signals of the Morse Code for the transmission of messages.

Art. 8.—All wireless installations in Spain including both coast and ship stations, open to the public, must carry on an interchange of messages irrespective of their wireless systems.

During the working hours fixed for each coast station the latter must receive the Morse signals and must also have a transmitter so disposed as to be able to reply in the signals of the same code.

Art. 9.—Coast wireless stations must accept and must give *absolute priority* to calls for help from ships in danger. They must, moreover, answer the said calls in the same order of priority and pass them on as urgent messages to the general telegraphic service.

Art. 10.—The administration shall establish three classes of stations—viz., public, official, and private. Those of the first class must have a radius of 600 kilometres and over, those of the second class one of 400 kilometres (there or thereabout), and those of the third class one of 200 kilometres. Exceptions may be made in accordance with practical experience in working.

Art. 11.—First-class stations shall have three wavelengths at their disposal—namely, one of 300 metres, another of 600 metres, and another which may reach the maximum length, but which must not be less than 1,600 metres. The last two will be used normally. The second and third-class stations shall have two wavelengths—namely, one of 300 metres and one of 600; and those of the second class will use normally the 600 metres wavelength, whilst those of the third class will use one of 300 metres, except in the cases referred to in Art. 14 final paragraph.

Coast stations situated near each other may maintain a special service between each other, provided that the distance between them allows of their doing so; but they must give preference to the Maritime Service. In the latter case, and for communications with national vessels on official matters, coast stations of both classes are allowed to use the special wavelengths to which their installations are adapted or adaptable for these services.

Art. 12.—Ships belonging to the Spanish Merchant Service shall use a normal wavelength of 300 metres, but they can alter this to a maximum of 600 metres.

Only in exceptional cases are vessels of small tonnage allowed to use ***normal waves*** of less than 300 metres.

Art. 13.—The General Post and Telegraph Office shall publish and keep always up to date a Directory showing the coast and ship wireless stations authorised and open to the public; together with the following information:—

(1) Name and geographical position of the coast station; identification signal in the International Code, and the port of register of the ship fitted with wireless.

(2) Call letters. (These must be all different and must be formed by groups of three letters.)

(3) Normal range.

(4) Wireless system adopted.

(5) The class of receiving apparatus whether automatic of auditive, etc.

(6) Length of waves used by the station. (The normal wave must appear in italics.)

(7) Class of service rendered by the station. This covers such items as general communication, restricted communication (*i.e.*, communication with ships, with steamship companies, with ships fitted with apparatus of the same system, etc.); public long distance communications; communications of a private nature; special communications (*e.g.*, those of an exclusively official character), etc.

(8) Hours of service.

(9) Coast and ship station rates.

The Directory above-mentioned shall also include information regarding wireless stations not open to general public service and the existence of which has been made known to the International Bureau by the Spanish Administration.

Art. 14.—Wireless service in coast stations shall be, whenever possible, of a continuous nature, operating both night and day without interruption.

The Post and Telegraph Office shall fix, in each case, the hours of service of those stations where the service is limited.

Coast stations where the service is not of a continuous nature cannot close for the day without having transmitted all radiotelegrams to ships within their sphere of action and without having first received all the radiotelegrams advised by them. This proviso shall also apply in the case of ships signalling their presence before the closing hour of the station.

Art. 15.—Private corporations cannot instal ship stations nor can they work any such station without Governmental authorisation. Permits in these cases will be issued in accordance with the provisions of the Berlin Convention and Regulations, by the Ministry of Marine, and will be communicated by the latter to the General Post and Telegraph Office.

Ship stations duly authorised must fulfil the following conditions:—

First.—The system employed must be a tuned system.

Second.—The speed, both for the reception and transmission of messages, must not under

normal circumstances be less than twelve words per minute, allowing five letters to the word.

Third.—The power transmitted to the wireless apparatus must under normal circumstances, not exceed one kilowatt. Nevertheless, greater power can be used if the ship is obliged to communicate over a distance exceeding 300 kilometres from the nearest coast station; or, if by reason of any interference, no communication can be established without increasing the power.

The service of the coast and ship stations shall be attended to by operators having their qualifying certificates issued by the General Post and Telegraph Office. This certificate must state the professional knowledge of the operator in the following matters:—

(*a*) Equipment of the apparatus.

(*b*) Auricular transmission and reception at a speed of not less than twenty words per minute.

(*c*) The knowledge of the regulations regarding interchange of wireless communications.

The qualifying certificate must also state that the Government has notified the operator that it is his duty to treat all communications as confidential.

Steamship companies are allowed to employ their own qualified operators provided they fulfil the conditions hereinbefore mentioned.

The Making-out and Presentation of Messages.

Art. 16.—For the making-out and presentation of radiotelegrams the provisions of Articles 10, 11 and 33 of the Berlin Conference Regulations, in addition to the rules laid down in the following Articles, shall be observed.

Art. 17.—Radiogram forms must have the words Radio Service on the heading.

On the transmission of messages from ship to coast stations no mention will be made of the date and hour of deposit.

On the re-transmission of the telegraph lines the coast stations shall note their own name as that of the station of origin, followed by the name of the ship, and shall register as the hour of transmission the time at which the radio was received by them.

Art. 18.—The instructions for delivery of messages destined for ships at sea must be as complete as possible. The form must be filled up as follows:—

First.—The name of the addressee with additional indications if necessary.

Second.—The ship's name as it appears in the Directory, adding her nationality, and if necessary, as in cases where there are two or more ships of the same name, adding also her identification letters in the International Code.

Third.—The coast station name as it is given in the Directory.

Art. 19.—The following messages will not be admitted:—

(1) Reply-paid messages.

(2) Money orders.

(3) Messages to be paid on delivery.

(4) Messages demanding acknowledgment of reception.

(5) Messages to be forwarded.

(6) Messages at special rates, except those for transmission on the telegraphic section or over-land wires.

(7) Messages marked "urgent" except on the over-land wired service, and then only with the reservation that the provisions of the international telegraphic regulations must be applied.

(8) Messages to be forwarded by post or express.

Art. 20.—The messages may be written in plain language or in code in accordance with the interior regulations for ordinary service and with the international conventions on the matter.

Art. 21.—The officials at the stations can ask the senders of wireless messages to prove their identity.

Rates and Executive Regulations.

Art. 22.—In the counting of words in order to apply the rates the officials must follow the provisions of Articles 18, 19, and 20 of the International Telegraph Service Regulations as revised in London in 1903.

Art. 23.—In conformity with Article 10 of the Berlin International Convention, the total rate for wireless messages shall include:—

(1) The rate applicable to the maritime section, namely,

(*a*) the rate in force at the *coast station.*

(*b*) the rate in force at the *ship station.*

(2) The rate established for the overland wired service, national or international, calculated in accordance with the general rules.

Art. 24.—The rate applicable to the maritime section is hereby fixed at 0.75 pesetas per word, of which 0.45 belongs to the coast station and 0.30 to the ship station.

With regard to the international service, in the case of messages to and from foreign ships, these rates shall be payable in francs, on the same basis.

The rate applicable to the overland wired service, national or international, shall be calculated and allocated in accordance with the interior regulations and with the international regulations.

The minimum rate applicable to the maritime section of wireless messages is hereby fixed at 7.50 pesetas, which is the wireless rate for a radiogram of ten words.

Art. 25.—The coast station rate will be charged only once, even if the message goes through several coast stations.

Art. 26.—The whole cost of the radiotelegram must be paid by the sender, and at ship stations a tariff indicating this must be displayed.

Art. 27.—For the purposes of book-keeping the coast station must consider itself as addressee with regard to the messages coming from the telegraphic service on their way to ship stations; and the coast station must consider itself as the original office with regard to the messages coming from ship stations for transference to the telegraphic service.

Art. 28.—Coast and ship station rates shall be calculated in accordance with the number of words computed, and in accordance with Article 23 of these Regulations.

Art. 29.—Merchant ships at sea can interchange messages if they find it convenient. The rates to be charged in such cases shall be laid down by the respective owners and shall not be taken into account by the National Administration.

Art. 30.—Ship stations on Spanish vessels shall send to those chartering them, upon their arrival in port, all documents in connection with and referring to all messages exchanged

with coast stations. The charterers shall send such documents monthly to the General Post and Telegraph Office, where it will be kept for a minimum period of twelve months and where liquidation of the accounts must be made in due course.

Art. 31.—The installations on Spanish men-of-war shall use, in their communications with the coast stations open to the public, the wavelengths which—under the terms of the Berlin Regulations—may be agreed upon between the Minister of Marine and the Minister of the Interior for the official service.

Both Spanish and foreign men-of-war can exchange private messages with the coast stations or with merchant ships; but only for the benefit of their crews. In such cases the technical and tariff provisions of these Regulations and those of the Berlin Convention and the Berlin International Regulations for the transmission of public correspondence, must be observed, as in the case of a merchant ship station open to the public. The regulations established to prevent the disturbance of wireless communications must be most carefully adhered to.

Art. 32.—When men-of-war exchange messages (private) with coast stations or with other ship installations they must follow the rules established for the computation of words and the collection of rates. In such cases the ship's purser in the Spanish vessels and the Minister of Marine shall respectively exercise similar functions to those assigned to the administration on board, and to the owner, as far as merchant ships are concerned.

In the calculation of coast and ship station rates for private service exchanged with foreign men-of-war, the General Post and Telegraph Office shall come to an understanding with the Administration of the country to which the said men-of-war belong.

Art. 33.—The same provisions shall hold good in the case of a military wireless installation, either permanent or portable, when the said installation utilises the stations established by the Administration for Public Service.

Art. 34.—Should, by some accident, the Submarine Cable Service be substituted for the Wireless Service for the sending of a message, the former shall only receive the rate applicable to a coast station. If communication by wireless is established between two points in Spanish territory otherwise without telegraphic communication, the rates charged shall be those of the Interior Telegraphic Service, and the rules of that service shall apply, except in the cases provided for in Article 19 of these Regulations.

Art. 35.—In the matter of transmission of messages, of the signals to be employed in them, orders of transmission, calls, acknowledgments of receipt, instructions as to the route to be followed by the radiograms, and instruction as to their final destination, the provisions made in Articles 15 to 32, both inclusive, of the Berlin Regulations must be observed.

Art. 36.—In cases when the return of charges made for radiotelegrams has been justly established the provisions of Article 35 of the Berlin Regulations must be observed.

Book-keeping.

In matters referring to book-keeping for the international wireless service the provisions of Article 36 of the Berlin Regulations must be observed.

General Rules.

Art. 38.—Coast stations, previously authorised by the General Post and Telegraph Office, shall furnish the authorised agents of Maritime Information Bureau with all such particulars concerning wrecks and disasters at sea as are of any interest to navigators, always provided that the said agents apply for such information.

Art. 39.—Authorised interchange of messages between ship stations on the high seas must be carried out in such a way as not to disturb the coast station's service. The latter shall have, as a general rule, the right of priority for Public Service.

Art. 40.—The order of transmission between ship stations on the high seas shall be settled by agreement between themselves.

The re-transmission of messages between ships at sea shall be arranged by agreement between the interested parties.

Art. 41.—The provisions of the International Telegraphic Regulations shall be applied by analogy, to radiotelegraphic communication as far as they are not antagonistic to these Regualtions, or the Convention, Additional Agreement, and the International Regulations of the Berlin Conference.

Art. 42.—The provisions of Articles 5, 6 and 9 of these Regulations shall apply to all classes of wirelees installations, official and authorised, even if they are not open to Public Service.

Madrid, January 24th, 1908.

Approved by His Majesty the King
—Maura.

(Seal.)

Royal Order of September 4th, 1914.

Art. 1.—According to the Royal Order of January 25th, 1908, the inspection and regulation of the Wireless Telegraph Service on board vessels of the Mercantile Marine are under the supervision of the Minister of the Navy, and by delegation to the Director-General of Fisheries and Merchant Shipping. The installations should fulfil all the requirements of the said Royal Order together with the rules and regulations of the London Radiotelegraph Convention of June, 1913, and the Rules of the Safety of Life at Sea Convention, January, 1914.

Everything affecting the service shall be controlled by the Navigation Department, which shall attend to the following matters:—

(1) The registration of all new installations authorised.

(2) The forwarding of all documents regarding such new installations accompanied by the order for their recognition.

(3) The sending of a report to the Home Office and War Office as to the result obtained from the various installations, together with indications of their characteristics.

To attend to this service the Director of Navigation and Fisheries will nominate a chief or a superintending official, together with five wireless inspectors on the coast, and this staff must have the qualifications as set forth in the Royal Order of May 21st last.

Art. 2.—The distribution of the staff on the coast and in the maritime provinces under each inspector shall be as follows:—

Barcelona.—Maritime provinces of Barcelona, Tarragona, Valencia, Mallorca, and Minorca (the residence of the inspector being at Barcelona).

Cartagena.—Maritime provinces of Alicante, Cartagena, Almeria, and Malaga, Melilla and Ceuta (the residence of the inspector being at Cartagena).

Cadiz.—Maritime provinces of Cadiz, Canary Islands and Huelva (the residence of the inspector being at Cadiz).

Vigo.—Maritime provinces of Vigo, Pontevedra, Villagarcia and Coruña (the residence of the inspector being at Vigo).

Bilbao.—Maritime provinces of Gijon-Santander, Bilbao and S. Sebastian (the residence of the inspector being at Bilbao).

Art. 3.—The wireless inspectors shall be under the orders of the Commandante de Marina of districts to which they are attached and in the ports of which they will have to make their annual inspection. They will only be allowed to leave their habitual place of residence when, for the convenience of the shipbuilders, they have to inspect a station in any other part of their district.

Art. 4.—The wireless inspectors must attend to the following duties:—

(*a*) To verify and inspect all new installations concerning which they may have been notified by the Director-General of Navigation and Fisheries that they are ready for public service, and to send in a report of the result of their verification and inspection.

(*b*) To visit annually the installations of such ships as are registered in the ports belonging to the districts within their jurisdiction, and to issue the necessary certificate according to the London Safety of Life at Sea Convention.

(*c*) To inspect foreign ship stations on board vessels which take passengers in Spain with the object of verifying that they are in possession of the certificate issued under the Safety of Life at Sea, which certificate must have been issued by the maritime authorities of their respective countries.

(*d*) To report to the Director-General all remarks or complaints made by the shipowners, crew or passengers in regard to this service so that the aforesaid Director may take such necessary steps as he may think fit.

(*e*) To see that all the staff that work the installations are in possession of the Government certificate according to the law of January 24th, 1908, with the object of making sure that all these installations are handled by duly qualified operators.

Art. 5.—For these duties a register book will be given to the wireless inspector in which he shall note the following particulars of each visit:—

(*a*) Date and place of inspection.
(*b*) Name of the vessel.
(*c*) System, radius, wavelengths, etc.
(*d*) Names of operators and dates of their certificates.

A copy of this information is to be sent every quarter to the Director-General in order that he can make out a list and maintain a register devoted to all important information and data.

Art. 6.—The naval and marine authorities will do their best to facilitate the work of the inspector, putting at his disposal the *craft* and *personnel* required by him for the fulfilment of his duties.

Art. 7.—When it is desired to instal a wireless station on board a ship, the builder, the owner, the agent or the captain must ask for permission from the Director-General of Navigation and Fisheries. As soon as the installation is completed the applicant must notify the above authority, stating the port in which he desires the visit to be made, so that the wireless inspector may receive instructions accordingly.

Art. 8.—Wireless installations are subdivided into three classes:—

(1) Stations with permanent service.
(2) Stations with limited service.
(3) Stations with special service.

Class 1 includes all vessels which carry twenty-five or more passengers and which have an average speed of fifteen or more knots. This class includes also ships carrying 200 or more passengers, having a speed of over thirteen knots, and travelling a distance of over 500 miles between two consecutive ports. The latter vessels should carry at least two telegraphists.

To Class 2 belong all the steamers not included in Class 1, provided they are fitted to carry twenty-five passengers or more. During the voyage the ships of this class must have one telegraphist on constant watch during seven hours per day and ten minutes at the beginning of the other hours.

In cases where the vessel is more than 500 miles distant from the nearest coast, the watch must be permanent.

To Class 3 belong all ships which are not included in Classes 1 and 2, and having fifty or more persons on board and carrying less than twenty-five persons or none.

The watch service on these ships must be continuously maintained during a transatlantic voyage or when the ship is over 1,000 miles distant from the coast. In special circumstances, and whenever advisable for the safety of life at sea, ships of every class may be obliged to keep a constant watch.

Vessels belonging to subsidised Government lines are obliged to carry wireless no matter where they sail or what crew they carry.

Art. 9.—The radius of the wireless station shall be a minimum of 100 miles at sea in daytime when communicating with ships under normal conditions and circumstances.

All the stations must be provided with an emergency set, installed on the upper deck, which must be kept in the best condition, having a source independent of the main electric supply and capable of being set in instant working order; this set must be able to work during six hours at least, and must possess a radius of a minimum of eighty miles for ships of the first class and fifty miles for the others.

Art. 10.—When testing the transmission and reception of messages, both installations shall be made to work with a ship at a distance of about 100 miles.

The wavelength and the oscillation current of the aerials must be measured.

When the Director-General thinks it necessary, the curves of resonance will have to be made and the degrees of coupling adjusted. When it is necessary to test the state of the receiving apparatus, the Director may order that one or several of the officers in that service shall mark trial tests with the different stations at various distances during the voyage.

Art. 11.—Inspections must be made at the ports of Barcelona, Cartagena, Cadiz, Vigo and Bilbao, which are the places of residence of the wireless inspectors. However, if for the convenience of builders, the inspection should be carried out at some other port, these builders must defray the travelling expenses of the said inspector.

ART. 12.—The radio inspectors shall receive remuneration for all the inspections they carry out with regard to wireless installations.

The amount of this remuneration shall be 100 pesetas with an increase of twenty-five pesetas for each auxiliary transmitter which the ship may carry independent of the emergency installation. Such remuneration shall be the same whatever the rank held by the radio inspector.

The annual inspections held for the issue of certificates in accordance with the provisions of the London Safety of Life at Sea Convention shall be made free of charge.

(Signed) RAMON ESTRADA,
Director-General of Navigation and Marine Fisheries.

Madrid, September 4th, 1914.

ROYAL DECREE DATED FEBRUARY 20TH, 1917.

Inscribed in the Official Record Under No. 49.

His Majesty the King (whom God save) inspired by the sentiment of humanity, of which the crews of the merchant ships, which in these difficult times with bravery and with risk to their lives maintain our maritime commerce are deserving, has, in accordance with the proposal of the Director-General of Navigation and Sea Fisheries, designed to decree—

1. All merchant ships of 500 tons and upwards which make long sea voyages or long coasting voyages must carry a wireless installation having a minimum range of 100 miles, as laid down under the International Radio-telegraphic Convention.

2. Similarly the said ships will carry one or more lifeboats in proportion to the number of the crew, each fitted with its own motor, or provided with adjustable motors of such a kind as to answer the same purpose.

3. Local directors of navigation shall allow a certain time for each ship to be provided with these things, the shipowners having to certify before the said authorities that they have taken the necessary steps or made definite contracts to obtain them.

ROYAL DECREE DATED JUNE 22ND, 1917.

In view of the request made by the "Cia Nacional de Telegrafia sin Hilos," His Majesty the King (whom God guard) has been pleased to order that all the radiotelegraphic stations concerned in the Royal Decree of Feb. 20th last inscribed in the Official Record under No. 49 shall carry emergency installations in accordance with Article 9 of the regulations for the service of installation and inspection of radiotelegraphy on board merchant ships on September 4th, 1914, excepting those installations which have sources of energy independent of that which forms a regualr part of the ship's equipment and is fitted on deck.

Madrid, June 22nd, 1917.

ROYAL DECREE DATED OCTOBER 12TH, 1917.

Issued in the form of a Circular Published in the Official Gazette of the Spanish Ministry of Marine No. 235 of November 19th, 1917.

In view of the collection of information by this Administration for the fulfilment of the Royal Orders of February 20th, and June 16th last (inserted in the Official Gazette of this Ministry and numbered 29 and 143 respectively) relative to the complete installation of wireless telegraphs on board merchant vessels of 500 tons and upwards, which are engaged in overseas and extended coasting trade, with a minimum range of 100 miles, on the conditions notified in the regulations governing wireless telegraphy.

And in view of the data recently communicated by the companies "A. E. G. Thomson Houston Iberica" and "Nacional de Telegrafia sin Hilos," the former saying that its resources permit the construction of 25 stations per month and that within one year 300 can be provided, whilst the latter give an assurance that they are able to supply wireless stations with the least possible delay, but not defining the duration of this delay.

It resulting from previous communications from this department that there are 57 stations already fitted and arranged for, and that there remain some 80 to be constructed or fitted.

It resulting, moreover, that this Administration deems a delay of eight months to be sufficient for the "Compañia Nacional de Telegrafia sin Hilos" to supply these 80 stations, that company being looked upon as a firm reputed in the business world as of good standing and with resources fully equal to those of the "A. E. G. Thomson Houston Iberica" and the delay of eight months being the double of that within which the latter undertake to fulfil those engagements.

His Majesty the King (whom God guard) in conformity with the information supplied by the Administration, and in agreement with his Privy Council, has thought it well to dispose that, beyond a delay of eight months from the date of publication of this Royal Order, the sailings of the ships mentioned in his Decree of February 20th of the present year shall be stopped if they fail to be fitted with complete wireless stations in accordance with the existing regulations, and that the Marine authorities in the provinces shall carefully communicate this decision to those who appear in their books as proprietors of the respective ships.

ROYAL DECREE OF FEBRUARY 8TH, 1917.

ART. 1.—All civil private wireless stations, whether they be transmitting and receiving stations, receiving alone, or assigned for the use of scientific or auxiliary meteorological observatories, are subject to the inspection of the Government, such inspection being carried out by the Home Office and the General Direction of Posts and Telegraphs.

The inspection shall be carried out by telegraph officials, and its object is to promote public order and interest, and protect the rights of the communication monoply that belong to the State, in fulfilment of the present dispositions on the matter and in strict observance of the concession conditions.

In accordance with the rights granted by contract with the State to the "Compañia Nacional de Telegrafia sin Hilos," this company can also perform the inspection of the above-mentioned wireless stations at her own expense.

The appointment of inspectors by the company shall be countersigned by the Postmaster-General, and when in performance of their duty will be treated as public officials and be granted the same facilities in the exercise of their duties as those given to the Government inspectors stated in Arts. 3 and 4 of this Royal Decree.

The Home Office shall decide all questions which might arise in the carrying out of this private inspection.

ART. 2.—In addition to the inspection work which the Home Office or the Postmaster-General may at any moment judge convenient to carry out a constant inspection service shall be carried out in the said civil radiotelegraphic stations under the Spanish State authorities.

ART. 3.—To carry out the constant inspection service stated in the preceding article, an inspector for each station shall be appointed by the Postmaster-General, who shall superintend the work, and the station shall not be used even for scientific purposes, except under his personal supervision. The inspector shall adopt such measures as he thinks fit to prevent the station being used during his absence.

When the working of a station cannot be attended to by one official alone, the Postmaster-General may assign two or more inspectors, and distribute between them the work of the station as he may judge convenient.

ART. 4.—Access will be allowed to the inspector of the station at any time of the day or of the night without need of permission, request, or notice of any kind.

For this purpose the keys of the place or places in which the apparatus is installed shall be given to the inspector by the owner or licensee of the station, so that no obstacle or delay may prevent his entrance.

ART. 5.—A weekly report of the general working condition of the station, stating the nature of the service, the day, hour, and minutes when they were effected, and any observation the inspector may judge should be specially noted, should be sent by him to the Telegraph Direction.

Immediate notice shall also be given by the inspector to the General Telegraph Direction of any technical or legal anomaly observed in the working of the station, and the orders of the authority shall be transmitted, executed, or caused to be executed by the said inspector.

ART. 6.—All applications for license to instal a radiotelegraphic station must comply with the following conditions, as well as with all others in force at the time :—

(1) The purpose for which the station is to be employed must be clearly expressed.

(2) A plan of the site where the station is to be installed, its communication with the public street or road, and the places where the apparatus are to be mounted in a 2 per cent. scale, and another plan with diagram of connections and details of aerial in a 10 per cent. scale, shall accompany the request for the licence.

(3) A detailed list of the apparatus specifying their nature, trade mark, and manufacture number (if any), must accompany the application.

(4) The name, age, address, and professional title (if in possession of one) of the operator or operators who will work the station must be stated.

The Home Office Minister can grant or refuse the concession of the license, and can also modify the technical conditions of the installation before or after the licence has been granted.

ART. 7.—No modification either of the installation or disposition of the station is allowed without authorisation of the Home Office Minister acting on information of the appropriate inspector.

All modifications should be reported to the General Telegraph Direction by the inspector of the station.

ART. 8.—Before a station is opened the proprietor or licensee will deposit a sum of 5,000 pesetas in the general safe of deposits at the disposal of the Postmaster-General, and set aside to cover the pecuniary obligations which the proprietor or licensee might incur.

This sum must be replaced should it diminish or disappear in making good the obligations for which it is set aside.

ART. 9.—The proprietor or licensee must pay all expenses incurred by the final inspection. These expenses comprise a sum which will be fixed by the Postmaster-General, and which must not exceed 2,000 pesetas per annum, to be given to the inspector in monthly payments as a reward for his services, and in payment of all office expenses.

Office accommodation should also be provided for the inspector of the "Compañia Nacional de Telegrafia sin Hilos," should there be one.

Should there be no telegraph office in the place where the station is installed, the proprietor or licensee must provide decent food and lodging for both the official and private inspectors, should there be any.

ART. 10.—The General Direction will classify as major or minor offences any infringements by the proprietor or licensee or any of their staff of this Royal Decree or any other standing orders in this regard.

In all cases the following will be considered as a major offence :—

(1) Not fulfilling the conditions of the license.

(2) Any modification in the installation or arrangement of the station without due authorisation of the Home Office.

(3) Deliberate obstruction of the inspector with regard to free access to the station under his charge.

(4) The using of the station for any service without the presence of the inspector.

(5) Infringement of the terms of Art. 8 of the Royal Decree.

ART. 11.—Apart from other criminal or civil responsibilities involved in the offences enumerated in the preceding article, the following penalties will be exacted :—

(*a*) Fine of 100 to 500 pesetas for petty offences.

(*b*) Fine of 501 to 2,000 pesetas for serious offences, together with loss of the licence and apparatus. The station will be dismantled at the General Direction of Telegraph's will.

The working of the station may be immediately suspended by the inspector on his discovery of any of the offences enumerated in numbers 1, 2, 3 and 4 of the preceding articles.

ART. 12.—Apart from other criminal responsibilities binding upon the inspector, acts of commission or omission infringing this Royal Decree or any other standing regulations on the matter will be considered as serious offences, and will be punished in accordance with the rules and regulations of the Post and Telegraph Corporation. Should the inspector not belong to the said corporation (*i.e.*, hold the rank of private inspector), the offence will be punished with the fine of 100 to

2,000 pesetas and disability from continuing in his office, the "Compañia Nacional de Telegrafia sin Hilos" being responsible for the payment of the fine.

ART. 13.—Any illicit station discovered shall be immediately dismantled, the General Direction taking possession of all apparatus. The proprietor and any other persons who may be found guilty of installing or working such a station shall, apart from other criminal responsibilities to which they be liable, be punished with a fine of 2,000 to 5,000 pesetas.

The owner of the building, director of the establishment, society, or corporation in whose premises a clandestine station is installed, and who, as soon as it comes to his knowledge, does not report the fact immediately in the quickest possible way to the General Direction, will incur the same responsibilities.

ART. 14.—Trial for these offences shall be held in public.

An informer shall be entitled to half of the amount of the imposed fine.

ART. 15.—The use of radiotelegraphy granted to official centres for scientific purposes and worked by public officials is not subject to constant inspection, and is excused the deposit referred to in Article 8. The service will not be suspended, nor the apparatus confiscated, should any infringement be committed by the licensee or staff; but the persons guilty of the offence shall be subject to the criminal or civil responsibilities which may personally affect them. A report will be sent in by the Minister of the Home Office to the Minister under whose supervision the station is administered of the offences committed in order to assure the observance of this Royal Decree, and that these offences should be noted in the personal service records.

ART. 16.—The terms of the Royal Decree do not concern the "Compañia Nacional de Telegrafia sin Hilos" (except those which specifically affect this company), and the inspection of these stations will be subject to the conditions of the contract with the State.

ART. 17.—The authorisation for the working of radiotelegraphic stations granted with priority under the Royal Decree must be carried into effect. The General Direction of Telegraphs will immediately organise the constant inspection service for the stations not comprised in Articles 15 and 16.

A term of eight days is granted from the date of publication of this Royal Decree for all private authorised existent stations to send in to the General Direction the information referred to in numbers 2, 3, and 4, of Article 6, and also make the deposit ordered in Article 9. If the term expires before the fulfilment of these obligations, the station will be considered as illicit, and immediate proceedings taken under Article 13, unless the licensee shall present before the expiration of the fixed term a renunciation of his license to the Minister of the Home Office through the General Direction. He must as a preliminary thereto have dismantled the apparatus.

The same term of eight days is given to those in charge of existing radiotelegraphic stations to hand over to the General Direction the information asked for in numbers 2, 3, and 4 of Article 6. Should the term expire without the fulfilment of these conditions proceedings will be taken according to Article 15.

CONVENTION OF MADRID, DATED JUNE 17TH, 1918, AS MODIFIED BY CONFERENCE OF JUNE 4TH, 1919. CONCERNING WAVELENGTHS TO BE USED BY STATIONS UNDER SPANISH CONTROL.

I

1. The undersigned have held meetings of a semi-official character in the Ministry of State, Madrid, Spain, on June 12th, 13th, 14th and 15th, 1918, for the purpose of discussing the means for avoiding interference in communications by wireless telegraphy and for the establishment of a programme which shall benefit mutually the radiotelegraph services of the various Governments represented.

2. Attached and below are three annexes marked (A), (B) and (C), in which are contained the agreements unanimously arrived at by all the representatives present.

Annexe (A) sets forth the agreements adopted.

Annexe (B) contains the organisation proposed in the transmission and reception by wireless telegraphy of the stations of the Spanish Army and Navy.

Annexe (C) includes the organisation proposed in the transmission and reception by wireless telegraphy of the stations of the Compania Nacional de Telegrafia sin Hilos and of the Ministry of State.

3. It is understood that all the agreements and arrangements are subject to the approval of the various Governments represented.

Capitan de Fragata,
Representing the Ministry of Marine.

Major R.M.L.I.
English Representative.

Naval Lieutenant,
French Representative.

Captain,
French Representative.

Corvette Captain,
Italian Representative.

Ensign U.S.I.,
Representative of U.S.A.

Director of the Official School of Telegraphy,
Representing the Ministry of the Interior.

Commander of Engineers and of the Army.
Representative of the Ministry for War.

Naval Lieutenant,
Representing the Ministry of State and of the Compania Nacional sin Hilos.

(*For Annexe (A) see next page.*)

TABLE B AS MODIFIED BY CONFERENCE OF JUNE 4TH, 1919.

NOTES.—(1) A station is always to be called on his watching wave (columns 3, 6 and 7).

(2) Normally the answer to the call and the signal to transmit should be made on the normal transmitting wave (column 4).

(3) In case of interference only, one of the waves indicated in column 5 may be used temporarily to avoid such interference.

(*) 1590 metre and 2100 metre wavelengths not to be used except when communicating with EGC, EGD, EGF and EGK.

(†) The watch on 1590 metres will not be kept except when ordered.

ANNEXE (A).

AGREEMENTS ADOPTED.

1. The Agreements of the International Radiotelegraph Convention of July 5th, 1912, will be strictly observed.

2. *Always whenever possible*, communication on a wave of 600 metres will be prohibited.

3. In accordance with the Convention, Spanish merchant ships shall continue to use the 600 metre wave when communicating with commercial coast stations and between themselves.

4. Although war vessels are entitled to use any length of wave whatever, it is agreed for mutual convenience that Spanish war vessels shall not communicate with naval and military stations or between themselves on 600 metres, but with the wavelengths specified in the Annexe (B).

5. It is agreed that inter-communication between Spanish coast stations, whether military naval or commercial, shall not be made with a 600 metre wave, but with the wavelengths fixed and specified in the Annexes (B) and (C).

6. When a Spanish military, naval or commercial coast station desires to send a messago to a Spanish coast station (commercial) which listens-in on a wave of 600 metres, the call will be with a wave of 600 metres and immediately afterwards they will give each other the conventional signals to change over to the 900 metre wave, and all subsequent communication will take place on that wave.

7. No operator of a coast station or ship station shall listen-in for more than one wavelength during the same period of time.

8. As far as possible, efforts shall be made that Spanish wireless telegraph stations do not interfere with the advices transmitted by coast stations at fixed hours or with the familiar calls for assistance (llamadas de auxilio).

The hours at which those advices are transmitted by stations on a wave of 600 metres are at present as follows :—

Station.	*Call Signal.*	*Time (G.M.T.).*

Sta. Isabel de Fernando Po.	EAY	600	600	—	—
Legación de Tánger ..	AB	900	300	—	Calls EAC on 600 and transmits on 300

Wavelengths longer than 600 metres, on which the aforementioned advices are transmitted, are not used in the Spanish organisation given in the Annexes (B) and (C).

9. As far as practicable, the wavelengths which have been adopted by all the nations for their press messages will be respected and not interfered with.

No press message shall be transmitted with a 600 metre wave.

10. With the object of obviating interference by the North American, English and French stations with the Spanish stations, the wavelengths selected in the Annexes (B) and (C) will not be changed as far as possible.

11. No call signal or any other working signal shall be made more than three times in each call, and no call signal shall be repeated more than three times in a quarter of an hour. (International Radiotelegraph Convention of London, July 5th, 1912, Articles XXV and XXVI.)

12. All nations represented agree to take the necessary steps to obtain the most exact syntonisation possible at all their stations with a view to ensuring the efficiency of the organisation of wavelengths given in the Annexes (B) and (C), and so that the intermediate wavelengths of 300, 750, 1050, 1350, 1650, 2200, 2750, etc., shall remain free for the use of North American, English and French warships and stations.

13. All communications by wireless telegraphy shall be limited as far as possible.

14. Meetings of a semi-official character will be held in Madrid every six months (June 1st and December 1st) between the representatives of the United States, England, France and Spain, with the object of exchanging impressions regarding :—

(*a*) Mutual organisation ;
(*b*) Means for eliminating interference ;
(*c*) Change of wavelengths ;
(*d*) Complaints.

ROYAL DECREE OF
18TH JANUARY, 1920.

On wireless telegraph and telephone installations for scientific purposes.

J Wireless telegraph, or telephone, sending and receiving, or only receiving, installations, for scientific purposes, are divided into two classes, viz. : (1) Permanent installations ; (2) Provisional installations.

Permanent installations, either for research, or as a complement to meteorological observatories, or for any other purpose, will be subjected to the prescriptions of the Royal Decree dated 8th February, 1917.

Provisional installations, or those fitted with the sole object of scientific experimenting or study of any branch of wireless communication, will be permitted by the Home Minister at his discretion for a given time, under the following conditions :—

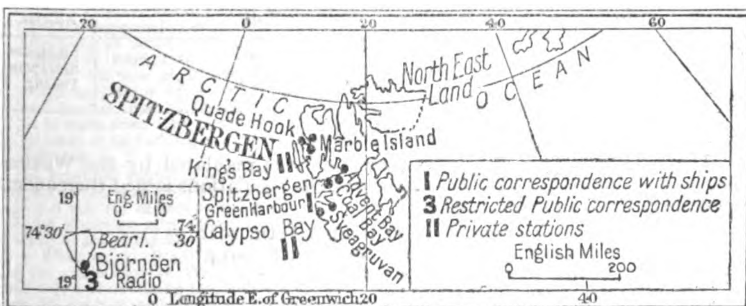
(1) Applications shall be accompanied by a full report of the experiments and researches which the applicant intends to carry out, showing the place or places destined for these experiments, with diagrams, if possible, of the aerial, transmitting or receiving apparatus and their category and importance.

(2) It must be stated for how long the license is required in order to carry out experiments and for how many hours per day it is intended to use it.

(3) The installation shall be inspected by an appointed official of the Spanish Telegraphs, and always under the control of the local Chief of the Telegraphs.

(4) As every license will be issued for a fixed time, at the expiration thereof the installation, comprising aerial and apparatus, shall be dismantled and the matter reported to the Director of Posts and Telegraphs.

(5) Employing the installation for other than experimental and research purposes will entail a fine upon the licensee of pesetas 500 to 2,000, in addition to the confiscation of apparatus and aerial, which shall become the property of the telegraph authorities.



(6) The licensee shall bear all expenses consequent upon the official inspection of this class of installation, in accordance with the stipulations of the Director of Posts and Telegraphs.

(7) Installations licensed for experiments in transmission shall be operated only at the hours and on the wavelength authorised by the Director of Posts and Telegraphs, in order to prevent interference with official and public services.

SPITZBERGEN

(SVALBARD)

THIS group of barren islands, discovered by Barents in 1596, has formed the starting point for many expeditions in their endeavours to reach the North Pole. They lie in about 80° N. latitude, and between 10° and 30° E. longitude, and possess rich mineral resources. Frequent attempts have been made in recent years to open up the archipelago commercially, and with that object several companies have been formed. These com-

panies possess wireless stations which correspond with the wireless station at Green Harbour, owned and worked by the Norwegian Government.

The private stations are placed in Advent Bay (Store Norske Spitsbergen Vulkompani), Kingsbay (Kinsbay Kulkompani), Sveagruvan (Sveakol), Coalbay (Anglo-Russian Crumant Co.), Calypsobay and Marble Island (Northern Exploration Co.), and Capboheman (Isefjord Coal Co.). This last named station is not in use.

At Quade Hook is placed a meteorological wireless station which is owned by the Norwegian Meteorological Institute. No laws and regulations yet exist regarding the working of radiotelegraphy, but as the territory has been placed under the suzerainty of Norway their proximate promulgation is to be expected.

On Bear Island, situated about midway between Norway and Spitzbergen a 3 kw. Marconi Station has been erected. This land station is owned privately by the Bear Island Code Company in Tromso, and is intended for communication direct with the Government wireless station at Ingoy (Norway).

STRAITS SETTLEMENTS

(See map on p. 146.)

THE Crown Colony of the Straits Settlements comprises Singapore, Penang, and Malacca. These settlements were transferred from the control of the Indian Government to that of the Secretary of State for the

Colonies on April 1st, 1867. Labuan, the Cocos Islands and Christmas Island have since been annexed to the Colony.

The administration is vested in the hands of a Governor, aided by an Executive Council, legislation being under the direction of a Legislative Council, presided over by the Governor.

CONTROL AND ORGANISATION.

Commercial wireless telegraph stations have been erected at Paya Lebar, Singapore, opened for traffic on October 8th, 1915, and Penaga, Penang, opened for traffic on February 21st, 1916. These installations are Government land stations under the control of the Postmaster-General.

Wireless telegraphy is a State monopoly, and licenses to erect and work stations are not issued to private companies or individuals.

There are no companies engaged in the manufacture of wireless apparatus, and no wireless societies, clubs, or publications. Arrangements have not yet been completed for the installation of aviation stations, and there are no wireless arrangements for the transmission of meteorological signals.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	*Title.*	*Address.*

Mr. F. H. Dupree	Engineer Operator	Singapore
Mr. S. R. Drayton	Engineer Operator	Penang

ADMINISTRATION.

The administration of wireless telegraphy is regulated by the Wireless Telegraph Ordinance of 1912, together with the regulations issued thereunder, which are printed *in extenso* below.

A—Ordinance of December 16th, 1912.
B—Regulations of January 5th, 1914.
C—Regulations of April 1st, 1919.

ORDINANCE OF DECEMBER 16TH, 1912.

A

1. This Ordinance may be cited as "The Wireless Telegraphy Ordinance, 1912."

2. The expression "wireless telegraphy" means any system of communication by telegraph as defined by "The Telegraph Ordinance, 1895," without the aid of any wire connecting the points from and at which the messages or other communications are sent or received:

Provided that nothing in this Ordinance shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

3. The Governor may, whenever he shall deem it expedient to do so, license the establishment of any wireless telegraph station or the installation or working of any apparatus for wireless telegraphy in any place in the Colony or on board any British ship registered in the Colony.

4. (1) No person shall establish any wireless telegraph station or instal or work any apparatus for wireless telegraphy in any place in the Colony or on board any British ship registered in the Colony except under and in accordance with a license granted in that behalf by the Governor.

(2) Every such license shall be in such form and for such period as the Governor in Council may determine, and shall contain such terms, conditions and restrictions on and subject to which the license is granted as the Governor shall consider desirable in the public interest.

5. (1) If any person establishes a wireless telegraph station without a license in that behalf or instals or works any apparatus for wireless telegraphy without a license in that behalf he shall be liable to a fine not exceeding one thousand dollars or to imprisonment of either description for a term not exceeding twelve months, and in either case be liable to forfeit any apparatus for wireless telegraphy installed or worked without a license, but no proceedings shall be taken against any person under this Ordinance except with the previous sanction of the Public Prosecutor.

(2) If a magistrate is satisfied by information on oath that there is reasonable ground for believing that a wireless telegraph station has been established without a license in that behalf or that any apparatus for wireless telegraphy has been installed, or worked in any place or on board any ship within the jurisdiction without a license in that behalf he may grant a search-warrant to any police officer to enter and inspect the station, place or ship and to seize any apparatus which appears to him to be used or intended to be used for wireless telegraphy therein.

6. (1) The Governor in Council may make regulations for all or any of the following matters:—

(i) For prescribing the form and manner in which applications for licenses under this Ordinance are to be made;

(ii) for prescribing the fees payable on the grant of any license;

(iii) for regulating the manner in which apparatus for wireless telegraphy on board a merchant ship, whether British or foreign, in the waters of the Colony shall be worked so as to prevent interference with naval signalling or the working of any wireless telegraph station lawfully established, installed, or worked in the Colony or the waters thereof, and so as not to interrupt or interfere with the transmission of any wireless messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea;

(iv) for prohibiting, except with the special or general permission of the Postmaster-General of the Colony, the working or using of any apparatus for wireless telegraphy on board a merchant ship, whether British or foreign, whilst such ship is in any of the harbours of the Colony;

(v) for prohibiting or regulating in case at any time in the opinion of the Governor an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy on board merchant ships, whether British or foreign, in the waters of the Colony, the use of wireless telegraphy on board such ships while in such waters by such further rules as the Governor may see fit to make from time to time, and either in all cases or in such cases as may be deemed desirable.

(2) Provided that no regulations made in respect of the matters described in paragraphs (iii) (iv) and (v) of this section shall apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

7. When an applicant for a license proves to the satisfaction of the Governor that the sole object of obtaining the license is to enable him to conduct experiments in wireless telegraphy a license for that purpose shall be granted, subject to such special terms, conditions and restrictions as the Governor may think proper, but shall not be subject to any rent or royalty.

8. (1) Every omission or neglect to comply with and every act done or attempted to be done contrary to the provisions of this Ordinance or of any Regulation made thereunder, or in breach of the conditions and restrictions subject to or upon which any license has been issued shall be deemed to be an offence against this Ordinance, and for every such offence not otherwise specially provided for the offender shall, in addition to the forfeiture of any article seized, be liable to a fine of five hundred dollars.

(2) All convictions, forfeitures and fines under this Ordinance or any Regulations made thereunder may be had and recovered before a district court.

REGULATIONS.

B The following Regulations, dated January 5th, 1914, were made under the "Wireless Telegraphy Ordinance, 1912":—

1. All apparatus for wireless telegraphy on board a merchant ship whether British or foreign in the waters of the Colony shall be worked in such a way as not to interfere with (a) Naval signalling, or (b) the working of any wireless telegraph station lawfully established, installed, or worked in the Colony or the waters thereof, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

2. No apparatus for wireless telegraphy on board a merchant ship whether British or foreign shall be worked or used whilst such ship is in any of the harbours of the Colony except with the special or general permission of the Postmaster-General of the Colony.

3. If at any time, in the opinion of the Governor, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships whether British or foreign while in the waters of the Colony shall be subject to such further rules as may be made by the Governor from time to time, and such rules may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

4. These Regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

THE WIRELESS TELEGRAPHY ORDINANCE, 1912.

REGULATIONS UNDER.

C In exercise of the powers conferred by section 6 of the Wireless Telegraphy Ordinance, 1912, the Governor in Council is pleased to make the following regulations:—

1. All apparatus for wireless telegraphy on board a merchant ship, whether British or foreign, in the waters of the Colony shall be worked in such a way as not to interfere with (a) Naval signalling, or (b) the working of any wireless telegraphy station lawfully established, installed, or worked in the Colony or the waters thereof, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

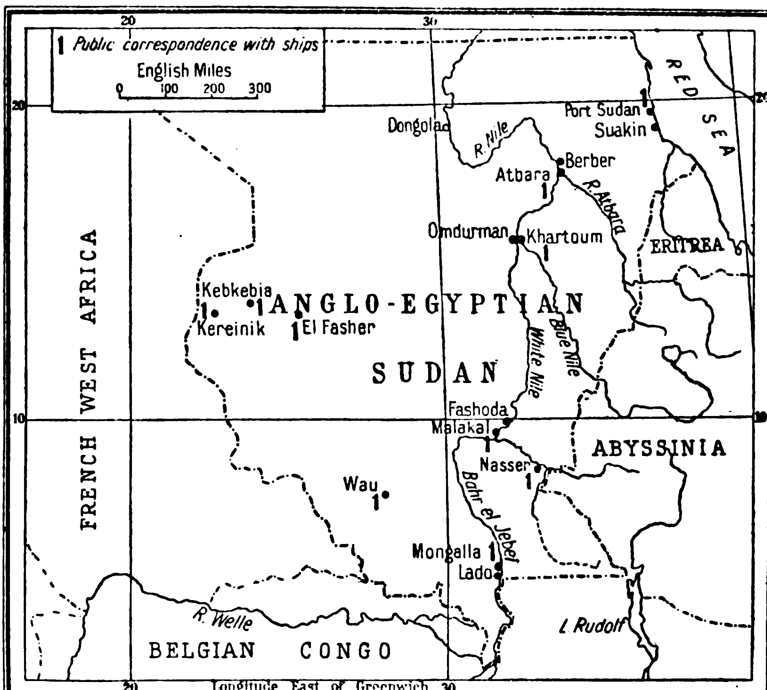
2. No apparatus for wireless telegraphy on board a merchant ship whether British or foreign shall be worked or used whilst such ship is in any of the harbours of the Colony, except with the special or general permission of the Postmaster-General of the Colony.

3. If at any time, in the opinion of the Governor, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy, the use of the wireless telegraphy on board merchant ships whether British or foreign while in the waters of the Colony shall be subject to such further rules as may be made by the Governor from time to time, and such rules may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

4. These Regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

5. The Regulations made on the 30th December, 1918, and published as Notification No. 5 in the *Gazette* of the 3rd January, 1919, are hereby cancelled.

E. C. H. WOLFF,
Clerk of Councils.



SUDAN

THE immense territory known by the above name covers approximately 985,000 square miles and is situated immediately to the south of Egypt proper. It formed the locale of the war against the Khalifa in 1896–99, when the late Earl Kitchener overthrew this oppressive rebel and restored the country to a state of security and comparative peace. The population of the Sudan is approximately 3½ millions. By a convention between the Egyptian and British Governments, signed at Cairo on January 19th, 1899, the administration of the territory south of the 22nd parallel of N. latitude lies in the hands of a Governor-General appointed by Egypt with the assent of Great Britain. All ordinances, laws and regulations are made by the Governor-General in Council.

CONTROL.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	*Title.*	*Address.*
Post and Telegraph Dept.—		
Lieut.-Col. J. P. Moir, D.S.O., R.E.	Director of Posts and Telegraphs	G.P.O., Khartoum
Mr. H. B. Sayer	Deputy Assistant Director for Wireless Duties	G.P.O., Khartoum
Superintending Engineers' Dept. (Wireless Section)—		
Staff-Sergt. W. Finding, R.E.	Wireless Inspector Mechanic	G.P.O., Khartoum
Mr. H. A. Woolidge ..	Wireless Inspector Mechanic	G.P.O., Khartoum

The wireless inspectors act as superintendents of groups of stations. The other personnel at the stations consist of European foreman engineers where possible in charge of groups of stations, native telegraphmasters and assistants, and native engine drivers and assistants.

ORGANISATION.

The first wireless installation in the Sudan was fitted at Port Sudan in the beginning of 1915, the first three inland stations, including those at Malakal and Gambela, being fitted in the autumn of the same year.

None of the stations is at present fitted with apparatus suitable for communication with aircraft. When the C.W. set at Khartoum approaches completion, the stations at Malakal and Mongalla, and subsequently the others, will be fitted with an alternative apparatus for receiving C.W. signals, but will still retain their spark transmission.

None of the stations transmits time, weather or meteorological signals.

ADMINISTRATION.

The Regulations affecting Radiotelegraphy in the Sudan are carried out under an Ordinance issued by the Governor-General, and dated at Khartoum, June 4th, 1906. No special regulations have been issued in pursuance of the Ordinance of 1906, and the service is conducted under the Provisions of the International Radiotelegraph Convention, 1912, and the Regulations for its execution. No licenses for private wireless stations have hitherto been issued.

A—Wireless Telegraph Ordinance.

AN ORDINANCE FOR CONSTITUTING WIRELESS TELEGRAPHY A MONOPOLY OF GOVERNMENT.
No. 2 of 1906.

A This Ordinance may be cited as "The Wireless Telegraph Ordinance, 1906."

No person shall instal or make use of any apparatus for Wireless Telegraphy or transmit or receive messages by means of any such apparatus within the Sudan except the Department of Telegraphs or a duly authorised officer or official of the Sudan Government, unless such person is in possession of a special license in writing from the Governor-General.

SWEDEN

(See map on p. 418.)

THE territory of the Kingdom of Sweden includes the eastern and main part of the Scandinavian peninsula. In the extreme north and north-east Norway and Finland are her neighbours. The border on the Finnish frontier is the Torne Elf, a river running from north to south, and falling into the northern end of the Gulf of Bothnia. Norway lies on the west of Sweden; and the Kiel, a chain of highland plateaux and mountains, forms the natural boundary thereof. The Kattegat to the south-west and the Baltic in a southerly and easterly direction separate her from the European continent.

The length of the country is estimated to be 2,500 kilometres from 69° north to 55° south latitude, and the size 450,600 square kilometres. Population about 6 millions.

Sweden is a constitutional monarchy. The Parliament consists of two chambers, of which the second chamber is directly elected by the people, and the first by the municipalities, in a somewhat indirect way.

The Cabinet is appointed by the King, and is supposed to be backed by a Parliament majority. The constitution rests on the fundamental law of 1809, revised in 1865.

CONTROL.

Wireless telegraphy, except in so far as the Navy is concerned, has been placed in the hands of the Kungliga Telegrafstyrelsen, which is a body under the supervision of the Minister of Communication and of which the Radio Bureau forms a special department.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	*Title.*	*Address.*
Mr. W. Murray	Minister of Communications	Stockholm
Mr. Sven Ludvig Herman Rydin	Director-General (Head of the Kungliga Telegrafstyrelsen)	Do.
Mr. S. Ljungqvist	Chief of Radio Bureau	Do.
Mr. A. S. Litström	Inspector of Wireless Installations	Do.
Mr. J. G. Holmström	Director of Radiotelegraphic Instruction	Do.

The first land station in Sweden was organised and owned by the Swedish Navy. At present five land stations belong to the Royal Swedish Telegraph Administration, two to the Swedish Navy, one to the State Railways, and two stations established on lightships to the Royal Pilot Administration.

On January 1st, 1919, the Swedish Government took over permanently all wireless telegraphy in Sweden and on board Swedish merchant ships. Hitherto, the Société Anonyme Internationale de Télégraphie sans Fil in Brussels, controlling the Marconi as well as the Telefunken patents in Sweden, had a virtual monopoly in the Mercantile Marine, but by means of a friendly arrangement between the Swedish Government and the S.A.I.T., the former have acquired the patent rights of the latter.

No private companies, societies or individuals are permitted to work wireless telegraphy or erect stations without a concession from the Government. There are no wireless clubs or societies.

ORGANISATION.

Wireless telegraphy was first employed by the Swedish Navy in 1902, and was at the same time installed on the fortresses near Vaxholm, off Stockholm, on the Baltic coast. Wireless rapidly developed in the Navy, and only a few years after the first trials every ship was equipped. In 1904 a ship station and shore station were built in Karlskrona, but some years elapsed before wireless was introduced into the Mercantile Marine. In 1910 the s.s. *St. Paul*, of Gothenburg, was fitted with a Marconi installation, and soon afterwards there was much wireless activity amongst Swedish shipowners, so that by the end of 1921 some 200 ships of the Mercantile Marine were carrying wireless.

For ship and shore traffic there are stations at Boden, Göteborg, Hernosand, Karlskrona, Gottland, and at Vaxholm, near Stockholm. An important 50-kilowatt station has been erected near Karlsborg.

Wireless stations for aviation purposes have not yet been established. Meteorological and Press services are sent out, more especially for Swedish ships. Experiments with direction finding stations have been going forward for some time, and a station was opened at Vinga on November 15th last. It is controlled by Göteborg which latter is addressed for requests for position.

LIST OF INSTALLATIONS.

Land stations for public traffic to ships	6
Land stations for restricted public traffic	4
Ship stations on Government vessels	44
Ship stations on privately owned vessels	200

ADMINISTRATION.

Wireless telegraphy and telephony are controlled by the Act of August 31st, 1907, the Royal Decree of May 13th, 1921, and the Statute 514 of December 23rd, 1915, concerning the equipment of vessels:—

A—Act of August 31st, 1907.
B—Royal Decree of May 13th, 1921.
C—Extract from Statute 514 of December 23rd, 1915.
D—Form of License.
E—Agreement between Denmark, Norway and Sweden regarding expeditious forwarding of radiotelegrams, (see Norway).

ACT OF AUGUST, 31st, 1907.

A CONCERNING THE ESTABLISHMENT AND WORKING OF INSTALLATIONS OF RADIOTELEGRAPHY AND RADIO-TELEPHONY.

1. Whosoever desires to establish in Sweden, on land or on board a vessel permanently moored in Swedish waters, an electric installation of radiotelegraphy or radiotelephony for public or private use must apply for an authorisation from the King.

2. The authorisation of the King must likewise be applied for, by any person or persons desiring to establish on board a Swedish vessel other than permanently moored, an installation of the kind referred to in Paragraph 1.

3. The authorisation granted by the King as prescribed in paragraphs 1 and 2, can only be granted for a certain period. In granting the authorisation, His Majesty prescribes under the reservation of private rights, the manner and conditions under which the installation may be established and worked.

4. Whosoever establishes or works, without the authorisation of the King or contrary to the provisions prescribed in the authorisation, an installation within the meaning of the present law, is liable to a fine of from 25 to 1,000 kronen if the penalty incurred by this contravention is not included in the Penal Code.

5. If an installation within the meaning of the present law has been established without the authorisation of the King, or contrary to the provisions prescribed simultaneously with the authorisation, or if the authorisation has been revoked later by the King, it is the duty of the Governors of Provinces to take the necessary steps to prevent any use being made of the installation.

6. Every fine imposed under the present law reverts to the State. Fines not paid on account of the insolvency of the delinquent are expurgated by terms of imprisonment as prescribed in the Penal Code.

7. The provisions of this law do not apply to State installations.

8. All regulations and all dispositions concerning foreign vessels not permanently moored in Swedish waters, which may be considered necessary for the proper working in Sweden of installations within the meaning of the Act, are made by the King.

ROYAL DECREE OF MAY 13th, 1921.

B ROYAL DECREE CONCERNING THE WORKING OF RADIOTELEGRAPHIC AND RADIOTELEPHONIC INSTALLATIONS ESTABLISHED ON BOARD FOREIGN VESSELS.

Given at the Palace of Stockholm on May 13th, 1921.

I, Gustave, by the grace of God, King of Sweden, of the Goths and Vendes, make known that on the representation which has been made to us, we hereby repeal the Decree of June 20th, 1913 (No. 125), concerning the working in the Kingdom of radiotelegraphic and radiotelephonic installations established on board foreign vessels, as well as the Decree of September 4th, 1916 (No. 375), concerning the conditions to be observed by those working in Swedish territorial waters, radiotelegraphic or radiotelephonic installations established on board merchant vessels, which Decrees are replaced henceforward by the following dispositions, decreed on account of the clause inserted at Section 8 of the law of August 31st, 1907 (No. 94), relative to the establishment and working of radiotelegraphic and radiotelephonic installations.

1. Radiotelegraphic or radiotelephonic installations established on board foreign vessels, not stationary in the territorial waters of Sweden are called in the present decree radio installations on board foreign vessels.

2. (i) Radio installations on board foreign vessels must not be used in the vicinity of Swedish ports, without special authorisation to this effect, given by the "Director-General of Telegraphs" in conjunction with the "Chief of the Admiralty," and under reservation of a strict observation of the detailed regulations prescribed by the "Director-General of Telegraphs."

(ii) In the latitude of the territorial waters of Sweden, which are situated at a lesser distance than ten nautical miles of a Swedish coast station the radio installations on board foreign vessels must not be used except in case of distress or in order to communicate to the coast urgently.

(iii) The "Director-General of Telegraphs" must be able, after having arranged to this effect with the "Chief of the Admiralty," to suspend or restrict, except in case of distress, the use of radio installations on board of foreign vessels, even should it be proceeding by other latitudes of the territorial waters of Sweden than those stated in Section 2, para (ii).

3. The Director-General of Swedish Telegraphs has power to issue any necessary regulations concerning the putting out of use of radio installations on board of foreign vessels found in a latitude where conforming to the regulations of Section 2 it is forbidden to use such an installation.

4. The Director-General of Telegraphs will make known to navigators in the way that he judges best the regulations and rules decreed in Section 2, para. (iii), as well as those in Section 3 of the present law, once and for all time, for a certain time, or for some particular case. The said Director will also solicitate the Director of the Administration of Pilotage, the Director-General of Customs, the Departmental Authorities making inspections, and the services subordinate to them respectively, the strict observance of the laws and regulations decreed.

5. When a radio installation on board a foreign vessel is used in the territorial waters of Sweden it must, unless otherwise ordered, conform to the instructions given in the Radio Telegraphic Convention in force with the service rules attached thereto.

6. All infringements of the regulations of the present law or the regulations and orders decreed by the Director-General of Telegraphs in virtue of the same law will be punished by a fine of 25 to 1,000 crowns.

7. The offences shown in Section 6 will be dealt with by the agents of the Civil Administration.

For the competent jurisdiction in the matter of these offences the parties implicated must conform to the rules of Section 328 of the Maritime Code.

The fines imposed on the offenders in this matter will be taken by the Crown. The fines of which the amount would not be paid on account of the insolvency of the delinquent will be commuted in accordance with the penal code.

8. The regulations of Sections 6 and 7 herein described are not applicable to warships.

The present law will enter into force on June 1st, 1921.

In faith of which, etc.
Made at the Palace of Stockholm on May 13th, 1921.

(Minister of Communications.)

EXTRACT FROM SWEDISH STATUTES, 1915.

No. 514 of 23rd December.

C

Fifth Chapter.
Equipment of Vessels.

I.—Wireless Telegraph Installation.

Art. 56.

Vessels which must be provided with wireless installation.—Vessels which are used for voyages between different countries or between a country and any of its colonies, possessions or protectorates, shall be equipped with wireless telegraph installation, provided however—

That such installation shall not be required if the vessel has fewer than 50 persons on board or if although the number on board is 50 or over, this is exclusively due to the fact that the master, by reason of sickness among the crew or through other compelling, unforseen circumstances, has been obliged to supplement the crew, or has saved persons in distress at sea, or by reason of obligation, according to law, has taken with him seamen or other persons;

And that the Board of Trade may, on application, grant exemption from the obligation of having such installation, if the Board, in view of the route or other circumstances concerning the voyage, finds that such installation is not necessary and if such application concerns:—

(*a*) Vessels which do not go out to a distance of more than 150 nautical miles from the nearest coast;

(*b*) Vessels which only in exceptional cases and incidentally have 50 persons or more on board for the reason that they take stowers or stowage labourers with them on a certain part of the voyage and which on the one hand do not sail from one continent to another, and on the other hand are, during the said part of the voyage, between 30° northern and 30° southern latitude; or

(*c*) Sailing vessels which are of rather primitive construction and which it is practically impossible to equip with wireless installation.

Art. 57.

Concession and classes of vessels.—Concerning H.M.'s permission to carry out such installation as referred to in Art. 56, separate enactments have been issued.

In sanctioning such installation as aforesaid the King will fix the class in which the vessel shall be classified, in accordance with the nature of the attendance of the wireless telegraph station.

Art. 58.

Range of the installation.—The wireless installation shall be sufficiently powerful to be able to transmit in day-time, under normal conditions, signals which can be clearly distinguished at a distance of at least 100 nautical miles from the vessel.

Art. 59.

Spare installation.—Vessels which are to be equipped with wireless installation shall have a spare wireless plant. This shall be placed wholly and entirely in the upper parts of the vessel, as high up as possible, and all its parts shall be fitted up so as to be protected as much as possible.

The spare plant shall have a source of power which is exclusively intended for the spare plant, and which can be brought into action most speedily.

The source of power referred to in the second paragraph of this article shall be capable of acting for at least six hours with a minimum range of 80 nautical miles in the case of vessels, for which uninterrupted attendance of the wireless installation shall have been provided, and of 50 nautical miles in the case of any other vessel.

If the main installation meets the requirements of the first and second paragraphs hereof as regards the spare plant the spare installation shall not be required.

SWITZERLAND

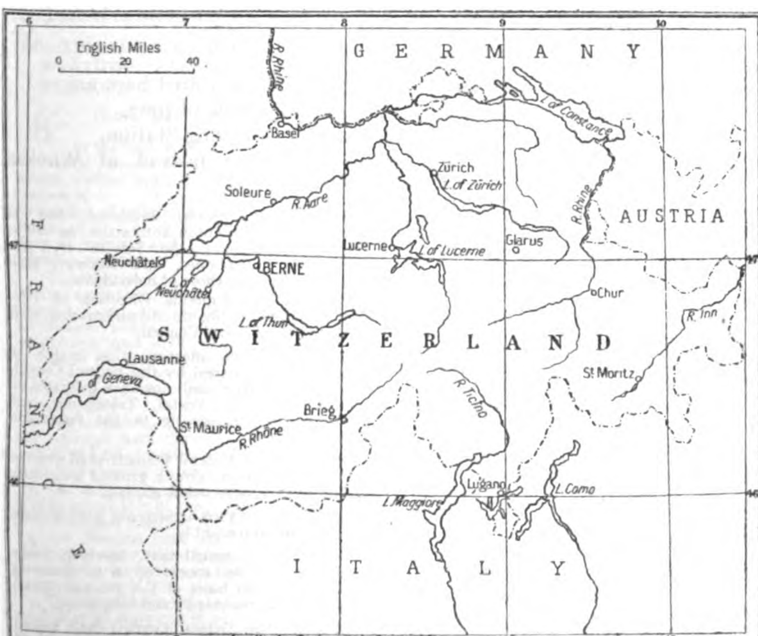
THE Swiss Confederation is made up of the union of twenty-five separate political entities, or republics, organised into twenty-two cantons.

The area comprises 15,976 square miles, the population (according to the census of December 1st, 1920) numbers 3,880,320. The country extends from 45° 0′ to 48° 0′ north latitude, its longitude lying between 5° 0′ and 11° 0′ east of Greenwich. The length from north to south is 137 miles,

the width from east to west 216 miles; the furthest points on its boundary are 223 miles apart.

The first Federal Organisation dates from September 12th, 1848, and the present Constitution came into force on May 29th, 1874. Supreme authority is exercised by the Federal Assembly, which consists of two Councils —the *Ständerath* or State Council, and the *Nationalrath* or National Council. The latter, which represents the Swiss people in its totality, consists of triennially elected members, each member representing a population of 20,000. The Ständerath (consisting of forty-four Deputies) represents the cantons, each canton contributing two members.

Both Chambers unite to elect the Federal Assembly, which wields the supreme authority and higher executive of the Confederation.



CONTROL.

Wireless telegraphy in Switzerland is controlled by the Department of Posts, Telegraphs and Railways, but there is no special branch of the department devoted thereto.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	*Title.*	*Address.*
Dr. R. Haab	Head of the Department of Posts, Telegraphs and Railways	Berne
Dr. R. Furrer	Director-General of Posts, Telegraphs and Telephones	Berne
M. Hauser	Assistant to the Director-General	Berne
E. Nussbaum	Engineer of Telegraphs	Berne

Wireless telegraphy is a State monopoly, based on the general Federal Law affecting telegraphs and telephones, of December 16th, 1907, of which we print below the apposite clauses.

Licenses are, however, granted for receiving stations only, available for a limited period, where these are to be used solely for the reception of time, weather signals, and general and technical instruction and scientific researches. We append the form of such contracts.

ORGANISATION.

At the outbreak of the late war the Federal Council prohibited the erection of new wireless stations, and revoked all existing licenses for utilising receiving stations. These private installations were accordingly forthwith dismantled, their apparatus being confiscated and stored by the Telegraph and Telephone Department. By way of compensation, the Federal Council decided, for the benefit of the dispossessed licenses, to carry out the clause of the International Confederation of October 25th, 1913, relative to an international time association. An Order in Council of September 14th, 1920, definitely revoked this prohibition, and the installations have been returned to their owners.

Starting with August 1st, 1916, the International Time Signal radiated from the Eiffel Tower is on working days telephonically transmitted by the Telegraph and Telephone Department at Berne to subscribers residing in Switzerland.

The Federal Council, on March 11th, 1921, granted a concession to Marconi's Wireless Telegraph Co. to establish and work an up-to-date wireless station with valve transmission of 25 kw. This station is worked by the "Marconi Radio Station, S.A.," constituted as a Swiss Société Anonyme for the purpose.

It is situated near the village of Münchenbuchsee 7·35 km. north of Berne, at an altitude of 580 m. The geographical position is lat. 47° 0′ 52″ long. 7° 26′ 37″ E. of Greenwich.

The station will be opened for public service on January 1st, 1922, and will work on a wavelength of 3,400 m.

ADMINISTRATION.

The texts of the ruling Laws and Regulations reprinted here are :—

A—The Federal Telegraph and Telephone Law of 1907.

B—The License for Time and Weather Receiving Station.

C—Federal Decree establishing Telephonic instead of Wireless Reception of International Time Signals.

FEDERAL LAW REGULATING THE ORGANISATION OF TELEGRAPHIC AND TELEPHONIC ADMINISTRATION.

(Dated December 16th, 1907.)

CHAPTER I.

ART. 1.—The right to establish and exploit any form of electrical telegraph and telephone in Switzerland, or to issue licenses for any such apparatus is vested solely in the Confederation.

ART. 2.—Localities whose commercial, industrial, or political status warrants the establishment of telegraphic or telephonic stations shall contribute their just quota towards the expense of such establishment.

Subject to appeal to the Federal Council the Telegraph and Telephone Administration shall decide the matter of installation and extent of the facilities granted. The Federal Council shall specify the rules governing the subvention and guarantees to be given by communities and individuals.

ART. 3.—The right of usage of such facilities shall be common to all. No special privilege with regard to fees or priority of transmission or reception shall be granted to any.

Nevertheless, official communications of the Federal and Canton authorities, as well as messages concerning the Service of Posts, Telegraphs, Telephones, and Railways shall have priority over those of individuals.

ART. 4.—The Supreme Direction of Telegraphic and Telephonic Administration shall belong to the Federal Council.

All regulations affecting this branch of service shall be issued by the Federal Council, so far as the latter shall not have delegated its authority to the Postal, Telegraphic, and Railway Departments or to the responsible officials thereof.

ART. 5.—The Federal Council shall conduct all negotiations concerning general telegraphic and telephonic agreements abroad.

Ratification of such agreements must be made by the Federal Assembly.

The Federal Council may, however, finally ratify agreements concluded with bordering countries on the basis of the general conventions affecting telegraphy and telephony.

ART. 6.—The Federal Council shall appoint all telegraphic and telephonic officials and employees. The nomination of individual

employees or fixed classes of employees may however be delegated to the Postal and Railway Department or to the Managing Director of Telegraphs and Telephones.

Art. 7.—The immediate superintendence of all the administration of telegraphs and telephones is delegated to the Postal and Railway Department which is moreover entrusted with the necessary executive power.

Chapter II.

This chapter contains Articles 8, 9, and 10, which enumerate the classes of chief officials.

Chapter III.

This chapter is concerned with the organisation of telegraphic and telephonic zones and the offices and officials to be established in connection therewith. It contains Articles 11 to 16 inclusive.

Chapter IV.

Herein are laid down (in Article 17) the classification and maximum salaries of chief officials.

Chapter V.

In this chapter we find Articles 18 to 22 embodying the general rules applying to the nomination basis of appointment and responsibilities of the various officials.

Chapter VI.

This chapter covers Articles 23 and 24 and concerns itself with offences and penalties. It also includes Article 25 enumerating the previous decrees abolished by this law and Article 26 the formal Direction of Issue.

PROVISIONAL LICENSE FOR TIME AND WEATHER RECEIVING WIRELESS STATIONS.

B There is hereby granted to of in the canton of a Provisional License to make use of a receiving wireless station which shall be installed in the premises of as well as for the erection of an antenna composed of strands of metres length, between the aforesaid premises and on the following conditions:

1. The erection and upkeep, with all that thereto appertains, shall be carried out in accordance with the regulations laid down by the Federal Council with regard to electric installations, and shall be carried out at the expense of the licensee, who shall have, moreover, to come to an understanding with the corporations or individuals whose property must be hired.

2. The installations granted must not in any way interfere with the working and development of the telegraphic and telephonic systems of the State and/or of the railway companies.

3. The oscillating circuit must be constructed so as to be capable of exact and definite adjustment to a fixed length of wave.

4. The licensee must conform to the rules with regard to wireless telegraphy, which may be laid down, from time to time, by the Federal authorities.

5. The installation granted under this license must be at all time and in every part accessible to representatives of the administration of telegraphs and telephones entrusted with the duty of control.

6. The installation shall only be used for the reception of time signals. Any other employment thereof (for instance, exchange of messages with radiotelegraphic stations in Switzerland or outside its frontiers, as well as the communication of any signals that may be received, or of their tenor, to third parties) will be considered as a violation of the rights of the confederation (see the provisions of Articles 23 and 24 of the Federal Law of December 16th, 1907, dealing with the organisation and administration of telegraphs and telephones).

7. When changes of any importance have to be made in the installation, or when its location has to be shifted, or if it is to be worked by any other person, the licensee is required to immediately advise the administration of telegraphs and telephones concerning the change.

8. The present license may be withdrawn at any time and for any period, and this may be done without conferring the right to any indemnity. In such an event the whole installation must be displaced at the cost of the licensee within fifteen days from the period fixed for the expiry of the license.

9. The licensee shall be responsible for any loss or expense incurred by the Federal administration in consequence of failure to carry out the terms of the present license.

10. The licensee shall pay to the Administrator of Telegraphs and Telephones a fixed fee of five francs payable at the Central Local Telegraph Centre of to defray the inspection and to cover the cost of registering the license.

Given at Berne the day of 19

I/We, the undersigned, after having acquainted myself/ourselves with the conditions and stipulations hereinabove set forth, declare myself/ourselves willing to accept them and abide by them.

The day of 19 .
(Signed)

TELEPHONIC TIME SIGNAL SERVICE.

Section A.

C Decree of the Federal Council dated July 21st, 1916.

The Swiss Federal Council, acting on the suggestion of its Postal and Railway Department, and in view of the Federal decision of March 27th, 1914, decrees:

1. That the international radiotelegraphic time signal radiated daily at 10.56 and at 11 o'clock (H.E.C.) from the Paris Observatory by the Eiffel Tower Station, shall be—during working days—retransmitted telephonically by the Administration of Swiss Telegraphs and Telephones at Berne.

2. Any regular telephone subscriber may take up a subscription to the telephonic time signal, arranging therefor with his telephone exchange.

3. Subscriptions are monthly or annual, and are valid for the civil month or civil year.

The rates of subscription are:

(*a*) Fr.2.50 per month, or part of a month.
(*b*) Fr.25 per year.

For ten months at least they must be paid in advance.

4. Over and above the possibility of regular subscriptions, telephone subscribers may arrange to be supplied with odd time-service messages on such circuits as receive them. Each separate

message will be charged for at the rate of 20 centimes, and this fee will be included, with ordinary conversation charges, in the monthly account.

5. The Administrator of Telegraphs and Telephones will accept no responsibility with regard to any irregular working of the Telephonic Time-Signal Service; nevertheless every endeavour will be made to assure and develop the service.

6. If any interruption in telephonic transmission of the time-signal last for more than seven consecutive days, without this arising from any fault on the part of the subscriber, the subscription fee will be refunded proportionately to the duration of the interruption.

7. Every effort shall be made to carry this edict into effect on and from the 1st August, 1916.

The Postal and Railway Department shall take steps to carry this out.

Dated Berne, 21st July, 1916.

SECTION B.

Method of Administration.

1. Every telephone subscriber who desires to subscribe to the Telephonic Time-Signal Service must address a written request to his telephone exchange showing exactly what kind of subscription he desires to take up (see Article 4 of this section, paragraphs (*a*) to (*c*)).

2. The telephone exchange which receives an application for such a subscription may, under this rule, accede to the application immediately.

On the reception of a first request for a subscription, the Telephone Exchange puts itself immediately in touch either with the Central Station through whose intermediary the time signal will be sent, or with its own local centre.

3. The originals of all applications for subscription must be sent to the Chief Office, through the intermediary of the local centres.

4. (*a*) The fees for annual subscriptions must be paid in advance for December, together with the half-yearly fees for the ordinary telephone service.

For periods of less than ten months, starting with the first day of the subscription and until the end of the year, the tax is collected on the basis of the tariff applicable to monthly subscriptions.

An annual subscription becomes automatically renewed from year to year, and may be cancelled at any time upon giving eight days' notice. If, however, it has not run for at least ten months, counting from the beginning of the year up to the date of cancellation, the rate of tax applicable is that of a monthly subscription.

(*b*) Fees for monthly subscriptions for a settled period (temporary subscriptions) are payable in advance, and for the whole duration of the subscription.

In default of advice to the contrary on the part of the subscriber, his subscription is considered as cancelled on the expiry of the agreed period.

(*c*) Monthly subscriptions of indeterminate duration are renewed automatically month by month. They may be cancelled at the end of a month by notice given at least eight days in advance; the subscription fees being payable monthly and in advance.

(*d*) Requests for reception of odd time-service messages are only granted in the case of lines of some importance, and on condition that they are made at latest by 10.50 a.m. Applicants are rung up at 10.55 a.m.

Applications are noted by entering the number of the subscriber on tickets specially prepared for this purpose. These tickets serve as the basis for the rendering of accounts.

When it has not been possible to attend to an application, because the subscriber's line was engaged his enquiry is charged as a local conversation. Fees for odd time-signal messages are charged for at the end of each month on the same invoice as conversation charges.

5. Subscription rates and charges made for odd time-signal messages come under subsection 2(*c*) of the accounts for messages, and must in consequence be entered, duly classified (see Article 4 of section (*a*) above) on Form No. 600 under "Other Receipts."

6. The commission allowed to exchange proprietors attached to central stations of Class III, and of intermediary stations, who have to co-operate in the telephonic time-service amounts to 25 per cent. on receipts. This commission is taken into consideration when, the annual telephone accounts are adjusted.

Time-service communications in transit should be recorded in the same way as ordinary conversations in transit.

7. When the time-signal message is transmitted to an intermediary station linked up with a central station of Class III, the latter has only a right to a commission of 2 cents per communication in transit, and the commission of 25 per cent. on the message is allotted to the proprietor of the intermediary station.

TAHITI

TRINIDAD AND TOBAGO

THE Colony of Trinidad and Tobago includes the island of Trinidad, which is about 69 miles long by 52 miles wide, with an area of 1,754 square miles, and the island of Tobago, which is about 26 miles long and 7½ miles wide, with an area of 114 square miles.

Trinidad is situated about 10° north of the Equator, between 61° and 62° west longitude, and Tobago is to the north-east of Trinidad, about 11° 9′ north latitude and 60° 12′ west longitude. They form a Crown Colony, and their government is administered by a Governor, assisted by an Executive Council and Legislative Council.

CONTROL AND ORGANISATION.

The first wireless station in Trinidad was erected in 1905 at the north-western corner of the island to obtain a direct sea line with Tobago, and merely to bring Tobago into telegraphic communication with Trinidad and thus with the outer world. It was a 2-kw. Lodge-Muirhead station. Subsequently this station was removed, and a 5-kw. Marconi station was erected in Port of Spain, with a daylight range of about 350 nautical miles and 1,000 nautical miles at night. Public ship and shore service is maintained therewith.

Trois Amis closed.

The Tobago station is on Fort King George, east of Scarborough, the capital of Tobago, and is a 3-kw. station (Marconi and Lodge-Muirhead), with a daylight range of about 350 nautical miles, and about 600 nautical miles at night.

The Trinidad and Tobago stations are open day and night for commercial service. There are no relaying charges between the two stations, and if ships are unable to obtain communication with Trinidad they endeavour to communicate with Tobago.

The Trinidad and Tobago Government Wireless Service is a branch of the Public Works Department and under the control of the Director of Public Works. The senior officers of the Wireless branch of the Public Works Department are as follows :—

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official	*Title.*	*Address.*
C. M. Cross, A.M.I.R.E.	O.C. Wireless Station	Trinidad and Tobago
L. W. Pouchet, A.M.I.R.E. ..	Chief Operator	Trinidad
A. E. Wilson	Second Operator	Tobago

ADMINISTRATION.

The Law and Regulations governing radiotelegraphy are reprinted below :—

A—Ordinance No. 6 of 1917.
B—Regulations.

ORDINANCE No. 6 of 1917.

ISSUED MAY 8TH, 1917.

A Be it enacted by the Governor of Trinidad and Tobago with the advice and consent of the Legislative Council thereof as follows :—

1. This Ordinance may be cited as the Wireless Telegraphy Ordinance, 1917.

2. (1) It shall not be lawful for any person to use or establish in this Colony any apparatus or installation for the purposes of wireless telegraphy, without first obtaining from the Governor a license in that behalf, to be granted on such terms and conditions as the Governor may from time to time prescribe.

(2) Any person contravening the provisions of this section is liable on summary conviction before a Magistrate to a fine not exceeding £50 or to imprisonment with or without hard labour, for any term not exceeding six months, and the apparatus and installation in respect of which a conviction is obtained may by order of the convicting magistrate be forfeited to the use of His Majesty the King.

3. (1) No person shall work any apparatus for wireless telegraphy installed on any merchant ship whilst that ship is in the territorial waters of the Colony, otherwise than in accordance with regulations made in that behalf by the Governor in Executive Council.

(2) Such regulations shall be published in the *Royal Gazette*.

(3) Any person contravening, or permitting, procuring, or assisting in the contravention of, any such regulation is liable, on summary conviction before a magistrate, to a penalty not exceeding £50, or to imprisonment, with or without hard labour, for any term not exceeding six months.

4. Any person who unlawfully and maliciously :—

(*a*) Injures, removes or destroys any apparatus or installation for the purpose of wireless telegraphy, or any part of such apparatus or installation ; or

(*b*) Obstructs or prevents in any manner whatsoever the sending, conveyance or delivery of any message or signal by wireless telegraphy ;

is guilty of a misdemeanour and is liable to imprisonment, with or without hard labour, for any term not exceeding two years.

5. The Wireless Telegraph Ordinance (No. 236) and the Wireless Telegraphy Ordinance 1909 are hereby repealed.

Passed in Council this twenty-seventh day of April, in the year of Our Lord one thousand nine hundred and seventeen.

REGULATIONS MADE UNDER THE WIRELESS TELEGRAPHY ORDINANCE, 1917.

B 1. All apparatus for wireless telegraphy on board a merchant ship in the territorial waters of the Colony shall be worked in such a way as not to interfere with (*a*) Naval signalling or (*b*) the working of any wireless telegraph station lawfully established, installed or worked in the Colony or the territorial waters thereof, and in particular the said apparatus shall be worked so as not to interrupt or interfere with the transmission of any messages between the wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

2. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used whilst such ship is in any of the harbours of the Colony, except with the special or general permission in writing of the Director of Public Works of the Colony. Such special or general permission shall only be given to any ship subject to the condition that it shall not exchange signals with another ship except on the private business of the owners.

3. If at any time in the opinion of the Governor an emergency has arisen in which it is expedient for the public service that His Majesty's Government shall have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships whilst in the territorial waters of the Colony shall be subject to such further rules as may be made by the Governor in Executive Council.

4. These regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering the signals of distress.

5. The regulations made under the Wireless Telegraphy Ordinance, 1917, on the 5th day of July, 1917, are hereby revoked.

Made by the acting Governor in Executive Council this 12th day of June, 1919.

TRIPOLI

TUNIS

(See FRANCE.)

TURKEY

STABLE conditions in the Ottoman Empire are not yet re-established sufficiently to enable us to obtain any information in regard to radiotelegraphy and telephony in that country, but we hope, in our next volume,

to print the full text of any laws and regulations which have been published in the interim. As far as is known, there is one station for Government traffic only.

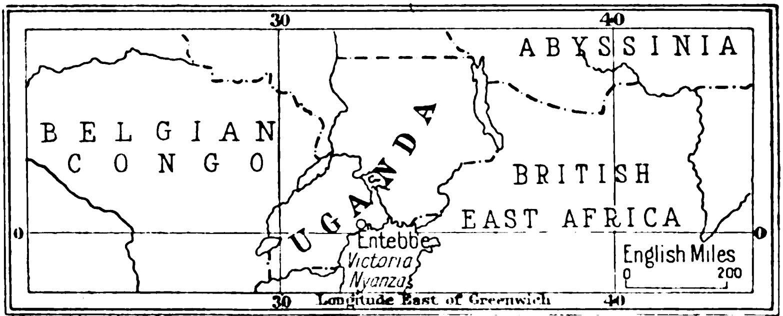
CONTROL.

OFFICIAL CONTROLLING WIRELESS TELEGRAPHY.

Official.	*Title.*	*Address.*
Mr. Réfik Halid ..	Director-General of Posts, Telegraphs and Telephones	Constantinople

UGANDA PROTECTORATE

UGANDA came under British dominion in 1890, and a portion of the territories was for a time administered by the Imperial British East African Company. The northern boundary is limited by the Sudan, the eastern by Kenya Colony, the western by the Belgian Congo, and the southern by Tanganyikan territory.



The administrative centre is Entebbe, the native capital of Uganda being Mengo, Kampala. Nile steamers from Khartoum ply to Rejaf. The Uganda Railway which runs from Kisumu on Victoria Nyanza to Mombasa on the coast of East Africa, lies entirely within the territory known as Kenya Colony and Protectorate.

The administration is conducted by a Governor and Commander-in-Chief, assisted by an Executive and Legislative Council.

CONTROL.

OFFICIAL CONTROLLING WIRELESS TELEGRAPHY.

Official.	*Title.*	*Address.*
Mr. W. G. Tucker ..	Telegraph Engineer	Entebbe
Mr. R. Rabson ..	Assistant Telegraph Engineer	Do.

ADMINISTRATION.

Wireless telegraphy is administered under the following :—

ORDINANCE.

1. This Ordinance may be cited as "The Wireless Telegraphs Ordinance, 1908."

2. No person shall use or establish any apparatus or installation for the purpose of operating wireless telegraphs without a license from the Governor.

Any person contravening the terms of this section shall be liable on conviction to a fine not exceeding Rs. 1,500 or imprisonment of either kind for a term not exceeding twelve months, and any apparatus or installation in respect of which an offence under this section is committed may be forfeited and sold or disposed of as the Governor may direct.

3. It shall be lawful for the Governor from time to time by rules to prescribe the terms and conditions upon which licenses to use or establish apparatus or installations for the purpose of operating wireless telegraphs may be granted.

UNION OF SOUTH AFRICA

(See SOUTH AFRICA, UNION OF.)

UNITED KINGDOM

(See GREAT BRITAIN.)

UNITED STATES OF AMERICA

THE declaration of independence of the States of the American Union was adopted by Congress, July 4th, 1776. The Constitution of September 17th, 1787, lays down the basis of government under which (modified by amendments in 1787, 1791, 1798, 1804, 1865, 1868, 1870 and 1913) this great and powerful Republic is now governed.

The Union comprises 48 STATES, each of which is provided with a Legislature of two Houses, a Governor at the head of the Executive and a judicial system. The district of Columbia (D.C.) is the seat of the Federal Government, and was provided by the State of Maryland for this purpose in 1791. It is co-extensive with the City of Washington, and embraces an area of 60 miles. The TERRITORIES of Alaska and Hawaii are governed by local Legislatures, whose Acts may be modified or annulled by Congress. The grand total of the superfices governed under the U.S.A. Constitution amounts to 3,574,658 square miles.

N.B.—There are, moreover, DEPENDENCIES administered by the U.S.A. Government. Their rule is undertaken by a Governor and staff appointed by the President. Porto Rico and the Philippines belong to this division, although provided with Representative Government. Guam, in the Marianne Archipelago (Pacific Ocean), and the Samoan Islands are pure Dependencies administered by the U.S. Navy Department. Wireless in all these instances is controlled by the Navy Department in war time, but in peace time the radio stations of Porto Rico, Hawaii and Alaska are under the jurisdiction of the Department of Commerce, and all commercial transmitting radio stations operated in these dependencies must be licensed by this Department, and the operators of such stations must also be licensed.

The " CANAL ZONE " on the Isthmus of Panama ranks as a Dependency, but it has been judged best to print the wireless particulars relating thereto separately under the heading " Panama—Canal Zone."

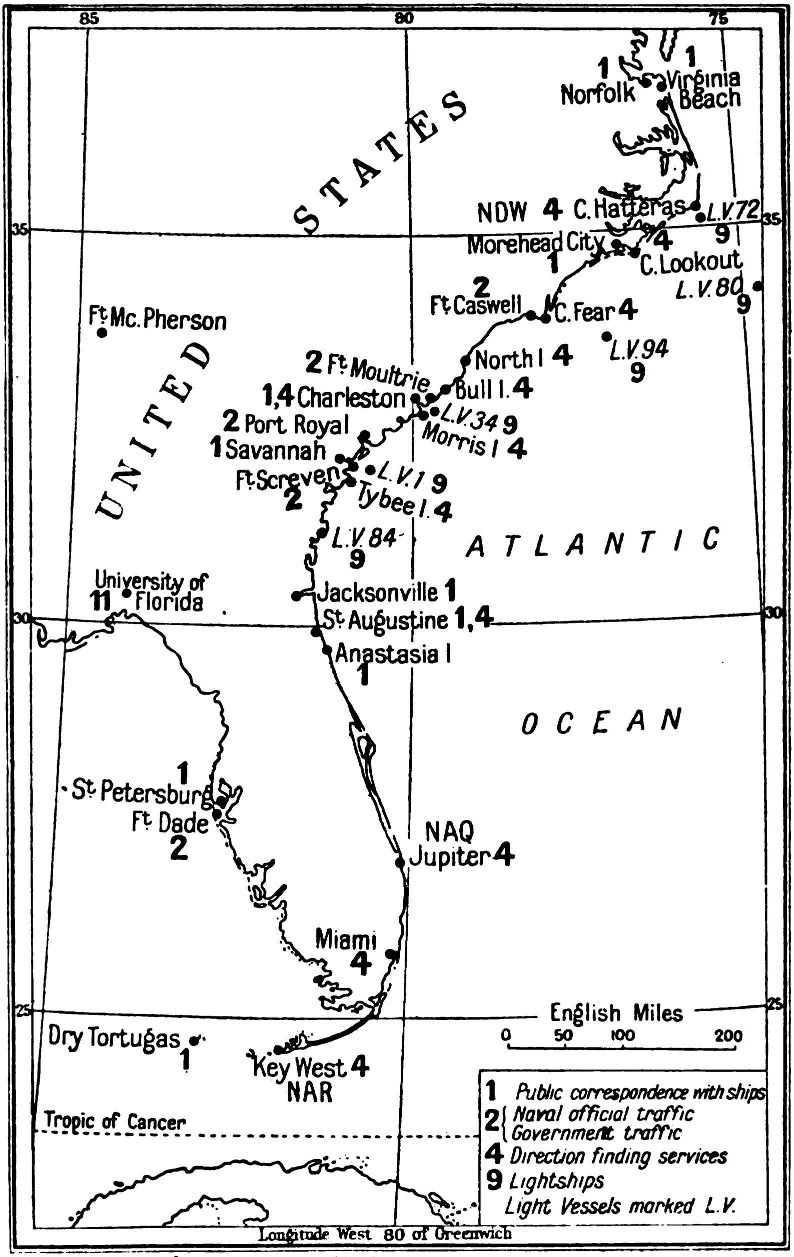
CONTROL.

The Congress of the United States has delegated to the Department of Commerce the duty of the enforcement of the Wireless Communication Laws and the International Radio-telegraph Convention, and the work is handled through the Bureau of Navigation, Washington.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Officials.	*Title.*	*Address.*
Navy—		
Rear-Admiral Marbury-Johnson, U.S.N.	Director of Naval Communications ..	Washington
Army—		
Maj.-Gen. Sir G. O. Squier, K.C.M.G ..	Chief Signal Officer	Washington
Commerce —		
Mr. Herbert Hoover	Secretary of Commerce	Washington
Mr. C. H. Huston..	Assistant Secretary of Commerce ..	Washington
Mr. E. T. Chamberlain	Commissioner of Navigation	Washington
Mr. A. J. Tyrer	Deputy Commissioner of Navigation ..	Washington
Mr. W. D. Terrell	Chief Radio Inspector	Washington

There are, in addition, twenty-one inspectors and assistant inspectors, stationed at various districts established by the Bureau of Navigation.



ORGANISATION.

In September and October, 1899, Senatore (then Mr.) Marconi installed a radio station for the purpose of reporting the International yacht races between the yachts *Shamrock* and *Columbia*. The *New York Herald* of October 1st, 1899, tells how wireless was used for sending bulletins from the steamships *Ponce* and *Grande Duchesse*, which followed the contending yachts.

According to the most reliable information obtainable, the first regularly operated radio stations in the United States were at Siasconset (Nantucket), Mass., and on Nantucket Shoals Lightship No. 66, work on which was started early in the summer of 1901. These stations were not experimental, or demonstrational, or temporary stations, but were erected for the particular purpose of providing for the regular daily transmission of ship news, and for regular communication and exchange of messages with vessels equipped with similar apparatus. They were owned and operated by the *New York Herald*, and were equipped with Marconi apparatus purchased from, and installed by, the English Marconi Company.

The *New York Herald* of August 17th, 1901, contained an account of how the first radiotelegraphic station at Siasconset got into communication by wireless with the Nantucket Shoals Lightship. The latter, on August 16th, received from the s.s. *Lucania*, of the Cunard Line, at a distance of 72 miles, the first connected wireless message ever radiated to the United States from an approaching vessel. That message ran, " All well on board."

In 1899 (the same year as that of the first wirelessly reported yacht races) the matter of establishing radio services in the TERRITORY of

HAWAII was receiving official attention. It was not until March 1st, 1901, however, that radio stations on the island were opened for business, the apparatus being supplied with power by Marconi induction coils. On October 15th, 1908, a 10-kw. station was erected at Kahuku Point, in Oahu (Hawaii) and at that time this was probably the most powerful station on the Pacific. Uninterrupted night communication was established with the wireless station on Telegraph Hill, San Francisco, California, a distance of 2,100 miles. This constituted the first direct radio communication between Hawaii and the U.S.A. On April 1st, 1915, a wireless service was established between the station at Wahiawa, Oahu (Hawaii), and the United States Naval Station at Tuluila, Samoa (2,400 miles distant). A composite system of equipment was used, with a transformer input of 6-kw., and a reliable nightly service has been maintained ever since.

In the TERRITORY of ALASKA radio communication takes the place of wired telegraph and telephone services. The large fish-canning companies rely almost exclusively upon their radio installations for communication between their canning plants, and for the maintenance of touch with their vessels engaged in this industry. Static interference (or atmospherics) is practically unknown there.

The number of wireless stations (excluding amateur installations) licensed in the United States at June 30th, 1921, totalled 3,557.

At June 30th, 1920, the *Government* shore wireless stations numbered 135, of which eighty-eight are in continental United States, twenty in Alaska, nineteen in the Philippines, three in the Canal Zone, two in Hawaii, and one each in Puerto Rico, Guam and Samoa. The *Government* ship stations total 470.

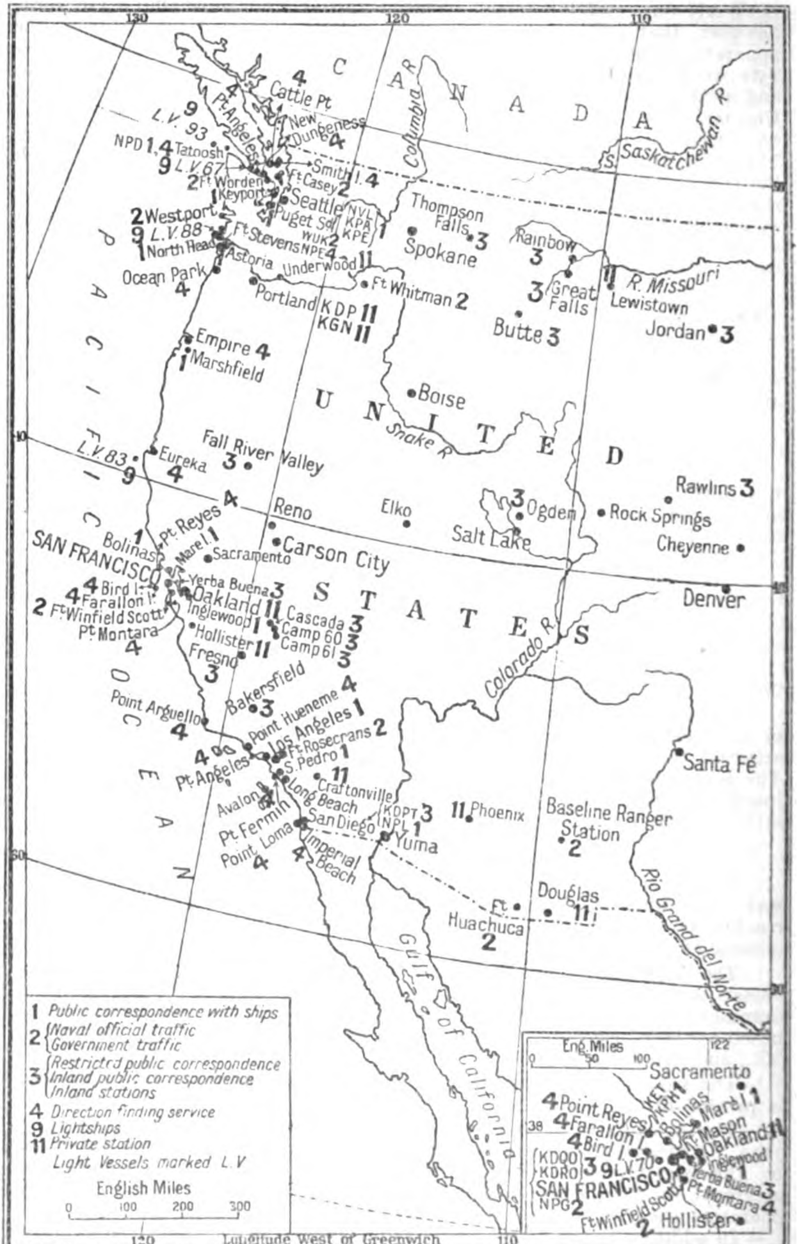
Considerable meteorological services are given under the control of the Department of Agriculture, Weather Bureau, in co-operation with the Office of Communication of the Navy Department. An extensive Hydrographic and Time service is dealt with by the Naval Department.

There are fourteen Air Mail Radio Stations used in connection with the mail services of the Post Office Department.

In practically every city of any size in the United States there are one or more radio clubs, composed of men interested in radiotelegraphy from a scientific standpoint, practical radio men, and amateur radio experimenters.* The most important of these clubs is the Institute of Radio Engineers (particulars regarding which may be obtained from the Year-Book published in New York by the Institute).

ADMINISTRATION.

In 1910 an effort to regulate radio communication in the United States was made, when a Bill was prepared and passed by the Senate. It was not reached on the House of Representatives calendar, and therefore did not become effective.



The first Act requiring radioapparatus on certain passenger-carrying vessels was approved June 24th, 1910. Under this Act the Secretary of Commerce and Labour organised on July 1st, 1911, the radio service, composed of three inspectors, with headquarters at New York, N.Y., Baltimore, Md., and San Francisco, Cal.

The second Act, approved July 23rd, 1912, amended the above Act and is printed below.

The Act to regulate radio communication was approved August 13th, 1912. Under this Act transmitting stations and radio operators are licensed by the Secretary of Commerce. Transmitting stations are inspected to ascertain whether they comply with the requirements of the law. Radio operators are examined in order to determine their qualifications.

In addition to the above-mentioned Acts, the Department also enforces

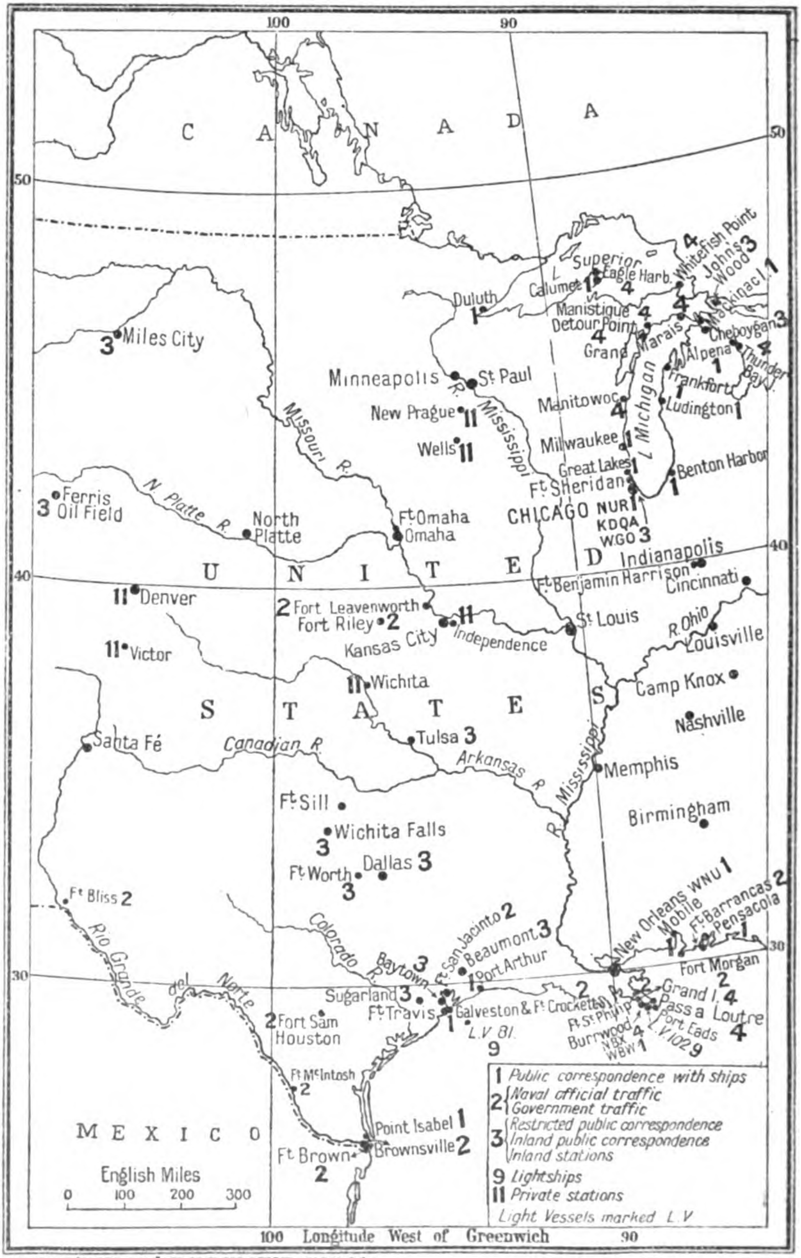
A An Act approved July 23rd, 1912, amending section 1 of an Act entitled "An Act to require apparatus and operators for radio communication on certain ocean steamers," approved June 24th, 1910.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled. . . .

"Sec. 1. That from and after October first, nineteen hundred and twelve, it shall be unlawful for any steamer of the United States or of any foreign country navigating the ocean or the Great Lakes and licensed to carry, or carrying, fifty or more persons, including passengers or crew or both, to leave or attempt to leave any port of the United States unless such steamer shall be equipped with an efficient apparatus for radio communication, in good working order, capable of transmitting and receiving messages over a distance of at least one hundred miles, day or night. An auxiliary power supply, independent of the vessel's main electric power plant, must be provided which will enable the sending set for at least four hours to send messages over a distance of at least one hundred miles, day or night, and efficient communication between the operator in the radio room and the bridge shall be maintained at all times.

"The radio equipment must be in charge of two or more persons skilled in the use of such apparatus, one or the other of whom shall be on duty at all times while the vessel is being navigated. Such equipment, operators, the regulation of their watches, and the transmission and receipt of messages, except as may be regulated by law or international agreement, shall be under the control of the master, in the case of a vessel of the United States; and every wilful failure on the part of the master to enforce at sea the provisions of this paragraph as to equipment, operators, and watches shall subject him to a penalty of one hundred dollars.



"That the provisions of this section shall not apply to steamers plying between ports, or places, less than two hundred miles apart."

Sec. 2. That this Act, so far as it relates to the Great Lakes, shall take effect on and after April first, nineteen hundred and thirteen, and so far as it relates to ocean cargo steamers shall take effect on and after July first, nineteen hundred and thirteen : *Provided*, That on cargo steamers, in lieu of the second operator provided for in this Act, there may be substituted a member of the crew or other person who shall be duly certified and entered in the ship's log as competent to receive and understand distress calls or other usual calls indicating danger, and to aid in maintaining a constant wireless watch so far as required for the safety of life.

The remaining sections of the Act of June 24th, 1910, which are unchanged, read as follows :—

Sec. 2. That for the purpose of this Act apparatus for radio communication shall not be deemed to be efficient unless the company installing it shall contract in writing to exchange, and shall, in fact, exchange, as far as may be physically practicable, to be determined by the master of the vessel, messages with shore or ship stations using other systems of radio communication.

Sec. 3. That the master or other person being in charge of any such vessel which leaves or attempts to leave any port of the United States in violation of any of the provisions of this Act shall, upon conviction, be fined in a sum not more than five thousand dollars, and

any such fine shall be a lien upon such vessel, and such vessel may be libelled therefor in any district court of the United States within the jurisdiction of which such vessel shall arrive or depart, and the leaving or attempting to leave each and every port of the United States shall constitute a separate offence.

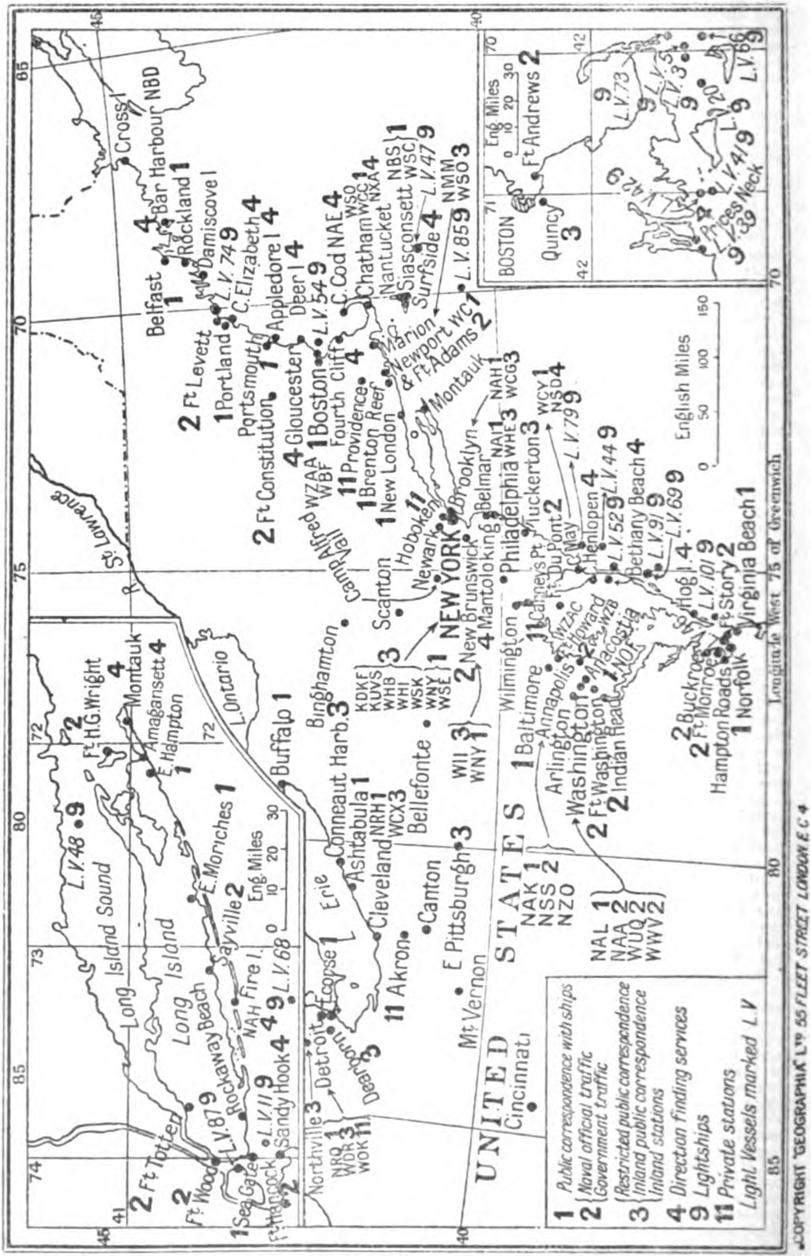
SEC. 4. That the Secretary of Commerce shall make such regulations as may be necessary to secure the proper execution of this Act by collectors of customs and other officers of the Government.

B

AN ACT TO REGULATE RADIO COMMUNICATION.

APPROVED AUGUST 13TH, 1912.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That a person, company or corporation within the jurisdiction of the United States shall not use or operate any apparatus for radio communication as a means of commercial intercourse among the several States, or with foreign nations, or upon any vessel of the United States engaged in interstate or foreign commerce, or for the transmission of radiograms or signals the effect of which extends beyond the jurisdiction of the State or Territory in which the same are made, or where interference would be caused thereby with the receipt of messages or signals from beyond the jurisdiction of the said State or Territory, except under and in accordance with a license, revocable for cause, in that behalf granted by the Secretary of Commerce upon application therefor; but nothing in this Act shall be construed to apply to the transmission and exchange of radiograms or signals between points situated in the same State: Provided, That the effect thereof shall not extend beyond the jurisdiction of the said State or interfere with the reception of radiograms or signals from beyond said jurisdiction; and a license shall not be required for the transmission or exchange of radiograms or signals by or on behalf of the Government of the United States, but every Government station on land or sea shall have special call letters designated and published in the list of radio stations of the United States by the Department of Commerce. Any person, company, or corporation that shall use or operate any apparatus for radio communication in violation of this section, or knowingly aid or abet another person, company, or corporation in so doing, shall be deemed guilty of a misdemeanour, and on conviction thereof shall be punished by a fine not exceeding five hundred dollars, and the apparatus or device so unlawfully used and operated may be adjudged forfeited to the United States.



SEC. 2.—That every such license shall be in such form as the Secretary of Commerce shall determine and shall contain the restrictions, pursuant to this Act, on and subject to which the license is granted; that every such license shall be issued only to citizens of the United States or Porto Rico or to a company incorporated under the laws of some State or Territory or of the United States or Porto Rico, and shall specify the ownership and location of the station in which said apparatus shall be used and other particulars for its identification and to enable its range to be estimated; shall state the purpose of the station, and, in case of a station in actual operation at the date of passage of this Act, shall contain the statement that satisfactory proof has been furnished that it was actually operating on the above-mentioned date; shall state the wavelength or the wavelengths authorised for use by the station for the prevention of interference and the hours for which the station is licensed for work; and shall not be construed to authorise the use of any apparatus for radio communication in any other station than that specified. Every such license shall be subject to the regulations contained herein, and such regulations as may be established from time to time by authority of this Act or subsequent Acts and treaties of the United States. Every such license shall provide that the President of the United States in time of war or public peril or disaster may cause the closing of any station for radio communication and the removal therefrom of all radio apparatus, or may authorise the use or control of any such station or apparatus by any department of the Government, upon just compensation to the owners.

SEC. 3.—That every such apparatus shall at all times while in use and operation as aforesaid be in charge or under the supervision of a person or persons licensed for that purpose by the Secretary of Commerce. Every person so licensed who in the operation of any radio apparatus shall fail to observe and obey regulations contained in or made pursuant to this Act or subsequent Acts or treaties of the United States, or any one of them, or who shall fail to enforce obedience thereto by an unlicensed person while serving under his supervision, in addition to the punishments and penalties herein prescribed, may suffer the suspension of the said license for a period to be fixed by the Secretary of Commerce not exceeding one year. It shall be unlawful to employ any unlicensed person or for any unlicensed person to serve in charge or in supervision of the use and operation of such apparatus, and any person violating this provision shall be guilty of a misdemeanor, and on conviction thereof shall be punished by a fine of not more than one hundred dollars or imprisonment for not more than two months, or both, in the discretion of the court for each and every such offence: *Provided*, That in case of emergency the Secretary of Commerce may authorise a collector of customs to issue a temporary permit, in lieu of a license, to the operator on a vessel subject to the radio ship Act of June 24th, 1910.

SEC. 4.—That for the purpose of preventing or minimising interference with communication between stations in which such apparatus is operated, to facilitate radio communication, and to further the prompt receipt of distress signals, said private and commercial stations shall be subject to the regulations of this section. These regulations shall be enforced by the Secretary of Commerce through the collectors of customs and other officers of the Government as other regulations herein provided for.

The Secretary of Commerce may, in his discretion, waive the provisions of any or all of these regulations when no interference of the character above mentioned can ensue.

The Secretary of Commerce may grant special temporary licenses to stations actually engaged in conducting experiments for the development of the science of radio communication, or the apparatus pertaining thereto, to carry on special tests, using any amount of power or any wavelengths, at such hours, and under such conditions as will ensure the least interference with the sending or receipt of commercial or Government

radiograms, or distress signals and radiograms, or with the work of other stations.

In these regulations the naval and military stations shall be understood to be stations on land.

REGULATIONS.

Normal Wavelength.

1. Every station shall be required to designate a certain definite wavelength as the normal sending and receiving wavelength of the station. This wavelength shall not exceed 600 metres or it shall exceed 1,600 metres. Every coastal station open to general public service shall at all times be ready to receive messages of such wavelengths as are required by the Berlin Convention. Every ship station, except as hereinafter provided, and every coast station open to general public service, shall be prepared to use two sending wavelengths, one of 300 metres and one of 600 metres, as required by the International Convention in force: *Provided*, That the Secretary of Commerce may, in his discretion, change the limit of wavelength reservation made by regulations first and second to accord with any international agreement to which the United States is a party.

Other Wavelengths.

2. In addition to the normal sending wave length all stations, except as provided hereinafter in these regulations, may use other sending wavelengths: *Provided*, That they do not exceed 600 metres or that they do exceed 1,600 metres: *Provided further*, That the character of the waves emitted conforms to the requirements of regulations 3 and 4 following.

Use of a "Pure Wave."

3. At all stations if the sending apparatus, to be referred to hereinafter as the "transmitter," is of such a character that the energy is radiated in two or more wavelengths, more or less sharply defined, as indicated by a sensitive wavemetre, the energy in no one of the lesser waves shall exceed 10 per cent. of that in the greatest.

Use of a "Sharp Wave."

4. At all stations the logarithmic decrement per complete oscillation in the wave trains emitted by the transmitter shall not exceed two-tenths, except when sending distress signals or signals and messages relating thereto.

Use of "Standard Distress Wave."

5. Every station on shipboard shall be prepared to send distress calls on the normal wavelength designated by the international convention in force, except on vessels of small tonnage unable to have plants insuring that wavelength.

Signal of Distress.

6. The distress call used shall be the international signal of distress ● ● ● ▬ ▬ ▬ ● ● ●

Use of "Broad Interfering Wave" for Distress Signals.

7. When sending distress signals, the transmitter of a station on shipboard may be tuned in such a manner as to create a maximum of interference with a maximum of radiation.

Distance Requirement for Distress Signals.

8. Every station on shipboard, wherever practicable, shall be prepared to send distress signals of the character specified in regulations 5 and 6 with sufficient power to enable them to be received by day over sea a distance of 100 nautical miles by a shipboard station equipped with apparatus for both sending and receiving equal in all essential particulars to that of the station first mentioned.

"Right of Way" for Distress Signals.

9. All stations are required to give absolute priority to signals and radiograms relating to ships in distress; to cease all sending on hearing a distress signal; and, except when engaged in answering or aiding the ship in distress, to refrain from sending until all signals and radiograms relating thereto are completed.

Reduced Power for Ships near a Government Station.

10. No station on shipboard when within fifteen nautical miles of a naval or military station shall use a transformer input exceeding 1 kw., nor, when within five nautical miles of such a station, a transformer input exceeding ½ kw., except for sending signals of distress, or signals or radiograms relating thereto.

Intercommunication.

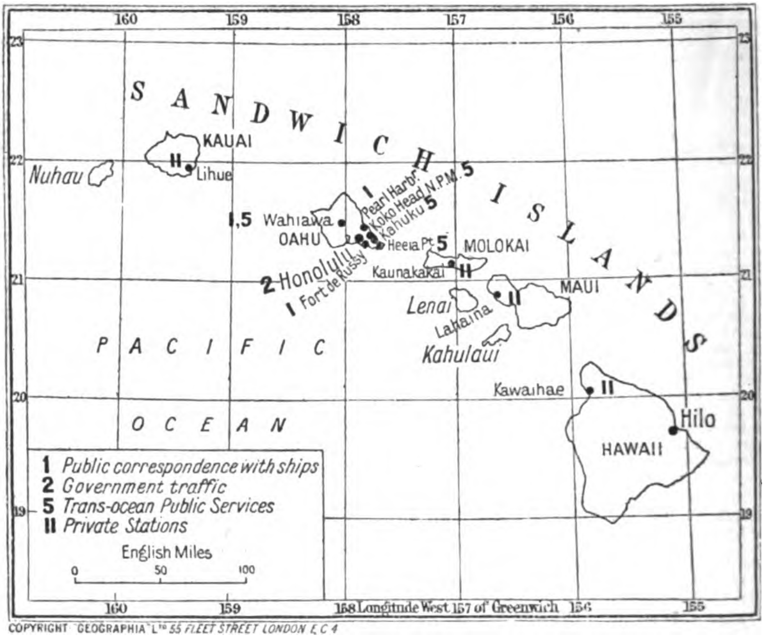
11. Each shore station open to general public service between the coast and vessels at sea shall be bound to exchange radiograms with any similar shore station and with any ship station without distinction of the radio systems adopted by such stations, respectively, and each station on shipboard shall be bound to exchange radiograms with any other station on shipboard without distinction of the radio systems adopted by each station, respectively.

It shall be the duty of each such shore station, during the hours it is in operation, to listen-in at intervals of not less than fifteen minutes, and for a period not less than two minutes, with the receiver tuned to receive messages of 300 metre wavelengths.

Division of Time.

12. At important seaports and at all other places where naval or military and private or commercial shore stations operate in such close proximity that interference with the work of naval and military stations cannot be avoided by the enforcement of the regulations contained in the foregoing regulations concerning wavelengths and character of signals emitted, such private or commercial shore stations as do interfere with the reception of signals by the naval and military stations concerned shall not use their transmitters during the first fifteen minutes of each hour, local standard time. The Secretary of Commerce may, on the recommendation of the department concerned, designate the station or stations which may be required to observe this division of time.

Government Stations to Observe Division of Time.



13. The naval or military stations for which the above-mentioned division of time may be established shall transmit signals or radiograms only during the first fifteen minutes of each hour, local standard time, except in case of signals or radiograms relating to vessels in distress, as hereinbefore provided.

Use of Unnecessary Power.

14. In all circumstances, except in case of signals or radiograms relating to vessels in distress, all stations shall use the minimum amount of energy necessary to carry out any communication desired.

General Restrictions on Private Stations.

15. No private or commercial station not engaged in the transaction of bona fide com-

Wahiawa, Honolulu, Fort de Russy and Koko Head closed.

mercial business by radio communication or in experimentation in connection with the development and manufacture of radio apparatus for commercial purposes shall use a transmitting wavelength exceeding 200 metres or a transformer input exceeding 1 kw., except by special authority of the Secretary of Commerce contained in the license of the station: *Provided*, That the owner or operator of a station of the character mentioned in this regulation shall not be liable for a violation of the requirements of the third or fourth regulations to the penalties of one hundred dollars or twenty-five dollars, respectively, provided in this section unless the person maintaining or operating such station shall have been notified in writing that the said transmitter has been found, upon tests conducted by the Government, to be so adjusted as to violate the said third and fourth regulations, and opportunity has been given to said owner or operator to adjust said transmitter in conformity with said regulations.

Special Restrictions in the Vicinities of Government Stations.

16. No station of the character mentioned in regulation 15 situated within five nautical miles of a naval or military station shall use a transmitting wavelength exceeding 200 metres or a transformer input exceeding ½ kw.

Ship Stations to Communicate with Nearest Shore Stations.

17. In general, the shipboard stations shall transmit their radiograms to the nearest shore station. A sender on board a vessel shall, however, have the right to designate the shore station through which he desires to have his radiograms transmitted. If this cannot be done, the wishes of the sender are to be complied with only if the transmission can be effected without interfering with the service of other stations.

Limitations for Future Installations in Vicinities of Government Stations.

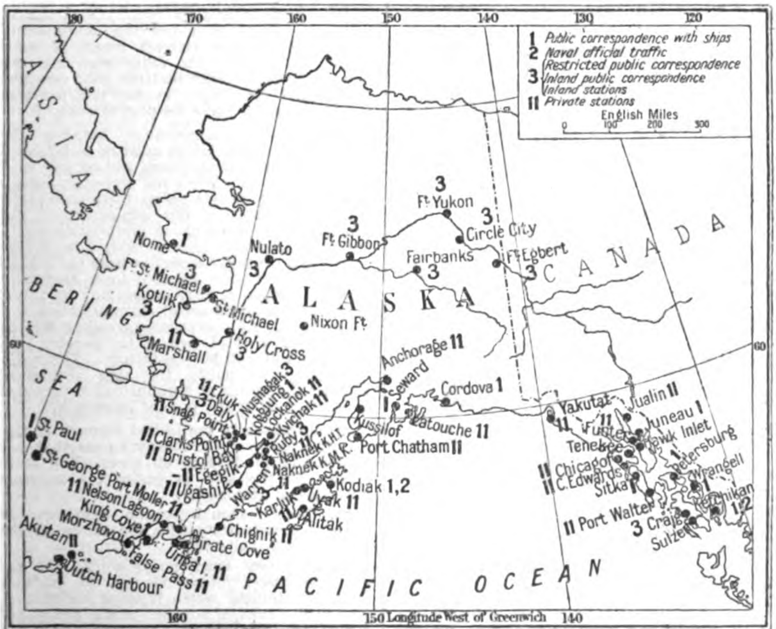
18. No station on shore not in actual operation at the date of the passage of this Act shall be licensed for the transaction of commercial business by radio communication within fifteen nautical miles of the following naval or military stations, to wit: Arlington, Virginia; Key West, Florida; San Juan, Porto Rico; North Head and Tatoosh Island, Washington; San Diego, California; and those established or which may be established in Alaska and in the Canal Zone; and the head of the department having control of such Government stations shall, so far as is consistent with the transaction of governmental business, arrange for the transmission and receipt of commercial radiograms under the provisions of the Berlin Convention of 1906, and future International Conventions or treaties to which the United States may be a party, at each of the stations above referred to, and shall fix the rates therefor, subject to control of such rates by Congress. At such stations and wherever and whenever shore stations open for general public business between the coast and vessels at sea under the provisions of the Berlin Convention of 1906 and future International Conventions and treaties to which the United States may be a party shall not be so established as to insure

a constant service day and night without interruption, and in all localities wherever or whenever such service shall not be maintained by a commercial shore station within 100 nautical miles of a naval radio station, the Secretary of the Navy shall, so far as is consistent with the transaction of governmental business, open naval radio stations to the general public business described above, and shall fix rates for such service, subject to control of such rates by Congress. The receipts from such radiograms shall be covered into the Treasury as miscellaneous receipts.

Secrecy of Messages.

19. No person or persons engaged in or having knowledge of the operation of any station or stations, shall divulge or publish the contents of any messages transmitted or received by such station, except to the person or persons to whom the same may be directed or their authorised agent, or to another station employed to forward such message to its destination, unless legally required so to do by the court of competent jurisdiction or other competent authority. Any person guilty of divulging or publishing any message, except as herein provided, shall, on conviction thereof, be punished by a fine of not more than two hundred and fifty dollars or imprisonment for a period of not exceeding three months, or both fine and imprisonment, in the discretion of the court.

Penalties.



For violation of any of these regulations, subject to which a license under sections 1 and 2 of this Act may be issued, the owner of the apparatus shall be liable to a penalty of one hundred dollars, which may be reduced or remitted by the Secretary of Commerce and for repeated violations of any of such regulations the license may be revoked.

For violation of any of these regulations, except as provided in regulation 19, subject to which a license under section 3 of this Act may be issued, the operator shall be subject to a penalty of twenty-five dollars, which may be reduced or remitted by the Secretary of Commerce, and for repeated violations of any such regulations, the license shall be suspended or revoked.

SEC. 5.—That every license granted under the provisions of this Act for the operation or use of apparatus for radio communication shall prescribe that the operator thereof shall not wilfully or maliciously interfere with any other radio communication. Such interference shall be deemed a misdemeanour, and upon conviction thereof the owner or operator, or both, shall be punishable by a fine of not to exceed five hundred dollars or imprisonment for not to exceed one year, or both.

SEC. 6.—That the expression "radio-communication" as used in this Act means any system of electrical communication by telegraphy or telephony without the aid of any wire connecting the points from and at which the radiograms, signals, or other communications are sent or received.

SEC. 7.—That a person, company, or corporation within the jurisdiction of the United States shall not knowingly utter or transmit, or cause to be uttered or transmitted, any false or fraudulent distress signal or call or false or

fraudulent signal, call, or other radiogram of any kind. The penalty for so uttering or transmitting a false or fraudulent distress signal or call shall be a fine of not more than two thousand five hundred dollars or imprisonment for not more than five years, or both, in the discretion of the court for each and every such offence, and the penalty for so uttering or transmitting, or causing to be uttered or transmitted, any other false or fraudulent signal, call, or other radiogram shall be a fine or not more than one thousand dollars or imprisonment for not more than two years, or both, in the discretion of the court, for each and every such offence.

Sec. 8.—That a person, company, or corporation shall not use or operate any apparatus for radio communication on a foreign ship in territorial waters of the United States otherwise than in accordance with the provisions of sections 4 and 7 of this Act, and so much of section 5 as imposes a penalty for interference. Save as aforesaid, nothing in this Act shall apply to apparatus for radio communication on any foreign ship.

Sec. 9.—That the trial of any offence under this Act shall be in the district in which it is committed, or if the offence is committed upon the high seas or out of the jurisdiction of any particular State or district the trial shall be in the district where the offender may be found or into which he shall be first brought.

Sec. 10.—That this Act shall not apply to the Philippine Islands.

Sec. 11.—That this Act shall take effect and be in force on and after four months from its passage.

D REGULATIONS GOVERNING SHIP AND LAND RADIO STATIONS.

Ship Stations.

1. On vessels coming under the Ship Acts, an emergency power supply, independent of the vessel's main electric power plant, must be provided which will enable radio messages to be sent for at least four hours over a distance of at least 100 miles day or night. The emergency power supply and equipment should be located and installed in such manner as to afford maximum protection against accident.

2. The radio transmitting apparatus operated from the emergency power supply, should be capable of functioning within two minutes after unexpected notice to the operator.

3. The complete equipment must be maintained in an efficient condition at sea.

4. The complete emergency equipment should be tested before each sailing and daily at sea by the operator or an inspector and a note of its performance entered in the radio log.

5. Radio inspectors or other duly authorised officers of the Government will occasionally call for test messages to be sent by means of the emergency apparatus, while the vessel is at sea.

6. An "induction coil" connected to "plain aerial" is not recommended as emergency apparatus on account of the high voltages produced which frequently damage the antenna insulation and on account of "vibrator troubles."

7. A motor generator or rotary converter operated by storage battery is probably the most satisfactory means available at present of energising the transmitting apparatus.

8. Any auxiliary engine for wireless purposes must operate on a fuel which will fulfil the requirements of Rule XI, section 5, of the General Rules and Regualtions of the Steam boat Inspection Service, reading as follows:

> None of the inflammable articles specified in section 4472, Revised Statutes, or oil that will not stand a fire test of 300° F. shall be used as stores on any pleasure steamer or steamer carrying passengers except that vessels not carrying passengers for hire may transport gasoline or any of the products of petroleum for use as a source of motive power for motor boats or launches of such vessels (Sec. 4472, R.S.)

9. Every ship station shall carry a reason able number of spares of such parts of both the main and emergency radiotelegraph equipments as are subject to undue wear, deterioration, or liability to accident.

10. One extra pair of head telephones, extra cords, and extra detectors must always be kept on hand.

11. A storage battery voltmeter, hydrometer, a supply of electrolyte, and distilled water should be part of the regular equipment, but are not prescribed in terms by statute. The absence of these and similar inexpensive emergency articles will be brought to the attention of the master and of the company installing the apparatus by the radio inspector, in writing, and if after a reasonable interval they have not been supplied, the inspector will communicate the fact to the Commissioner of Navigation.

12. The vessel's electric power for the operation of the main equipment shall, at all times while the steamer is under way, be available for the radio operator's use. On steamers where the dynamo is not run continuously there should be an efficient means of communication between the radio room and the dynamo room, in order that the radio operator may signal for power, as the law provides that he may not leave his post of duty.

13. Efficient communication between the radio room and the bridge must be maintained. A speaking tube or telephone will comply with this requirement. A bell and messenger service will not be acceptable unless there are special conditions justifying this equipment. The speaking tube or telephone must terminate in the radioroom and on the bridge, or in the chart room if readily accessible from the bridge. If the radio room is adjacent to or accessible from the bridge so that orders may be transferred direct, no means of communication will be required. Any arrangement calling for the services of a third person to transmit the messages will not be satisfactory. The radio inspectors will notify the ship authorities whether the means of communication provided is satisfactory at the time of inspection.

14. On vessels of the United States it is the statutory duty of the master to see that one operator is on duty at all times. The radio service of the ship is under the supreme authority of the master.

15. Masters should require operators on duty to communicate with the officer on the bridge every half-hour.

16. Operators must make entries on the radio log *every fifteen* minutes, as evidence that a continuous watch is being maintained. The entries must, if possible, consist of the call letters of other stations communicating and a few words of the intercepted messages.

17. When vessels are in port the key to the radio room must at all times be on board in charge of the proper officer and the radio equipment shall be in such condition as to facilitate Government inspection.

CLASSIFICATION OF SHIP STATIONS AND GRADES OF OPERATORS REQUIRED.

18. First Class: Vessels having a continuous service. There shall be placed in the first-class vessels which are intended to carry twenty-five or more passengers:

(1) If they have an average speed in service of fifteen knots or more.

(2) If they have average speed in service of more than thirteen knots, but only subject to the two-fold condition that they have on board 200 persons or more (passengers and crew), and that, in the course of their voyage, they go a distance of more than 500 sea miles between any two consecutive ports.

19. Second Class: Vessels having a continuous *watch* but a *service* of limited duration. Other vessels placed in the second-class *must*, during navigation, maintain a continuous *watch* for at least seven hours a day, and a *watch* of ten minutes at the beginning of every other hour.

20. Third Class: Vessels which have no fixed periods of service. All vessels which are placed neither in the first nor in the second-class shall be placed in the third-class.

21. *Service* may be defined as preparedness to transmit and receive radio messages or signals at the rate of at least twenty words per minute.

22. *Watch* may be defined as preparedness to receive distress signals and call letters slowly. A "watcher" or cargo-grade operator will summon a first or second-class operator if necessary.

23. All American vessels required by the Act of July 23rd, 1912, to be equipped with radio apparatus, and operators *must* at all hours maintain a continuous *watch*; that is to say, an operator or *watcher* must be "listening-in" continuously. This requirement is outside of and above the requirement based on the classification under which the ship's station is licensed.

24. Vessels voluntarily equipped are not required to maintain this continuous *watch*. Vessels voluntarily equipped are, however, subject to the following requirements as to *watch* according to the class assigned to them in their station licenses.

25. If a licence of the second class be issued to a voluntarily equipped vessel, the station *must* maintain a continuous *watch* for at least seven hours a day and a *watch* of ten minutes at the beginning of every hour.

26. The grade of operators required on vessels of each class are prescribed in the London Convention Service Regulations, Article X. A continuous *watch* may be maintained by one commercial second-grade operator and one cargo-grade operator on cargo steamers.

27. Passenger vessels coming under the Act of July 23rd, 1912, which carry or are licensed to carry twenty-five or more passengers, *must* be placed in the first class:

(*a*) If they have an average speed in service of fifteen knots or more.

(*b*) If they have an average speed in service of more than thirteen knots, but only subject to the twofold condition that they have on board 200 persons or more (passengers and crew), and that in the course of their voyage they go a distance of more than 500 sea miles between any two consecutive ports.

The *service* shall be carried on by at least two commercial first-grade operators.

28. Cargo vessels coming under the Act of July 23rd, 1912, which are required to maintain a continuous *watch*, *must* be placed in the second class if continuous *service* is not maintained. On cargo steamers a continuous *watch* may be maintained by at least one commercial second-grade operator and one cargo-grade operator.

29. Passenger vessels coming under the act of July 23rd, 1912, but which are not *required* to be entered in the first class, *may* be entered in the first or second class, according to whether continuous *service* or continuous *watch* is maintained. The number and grade of operators required is determined by *service* or *watch*. On passenger vessels coming under the Ship Act but entered in the second class at least two second-grade operators are required to maintain continuous watch.

30. Cargo vessels which coming under the Act of July 23rd, 1912, and are required to maintain a continuous *watch*, may be placed in the first class, if continuous *service* is maintained. (For operators, see par. 28.)

31. All vessels voluntarily equipped with radio apparatus and which have no specified hours of *service* or *watch* must be placed in the third class.

32. Any vessel voluntarily equipped may be placed in the first class if continuous *service* is maintained, or in the second class if a continuous *watch*, or a watch of limited duration, such as specified above for vessels of the second class is maintained.

33. In all ship stations transmissions shall be made only by operators holding commercial first or second grade licenses or higher.

34. Commercial *service* shall be maintained by not lower than commercial first-grade operators.

35. Vessels which are voluntarily equipped with radio apparatus for their own convenience and for the correspondence of officers and crew must employ at least one commercial second-grade operator or higher.

36. Radio telephone apparatus on vessels not coming under the Act of July 23rd, 1912, must be operated by a person holding a cargo-grade license or higher.

37. The owners of ship stations desiring to change the classification of a ship must apply for a new license.

LAND-STATIONS.

38. Coast stations are stations which transmit messages to vessels at sea or on the Great Lakes, or whose operations can interfere with the exchange of messages between ship and ship or ship and coast. The principal purpose of the regulation of radio communication, international and national, is to secure the greatest efficiency of maritime communication through this agency, especially as a means of promoting safety to life.

39. Inland stations are stations which cannot transmit messages to vessels at sea or on the Great Lakes and whose operations cannot affect the transmission of messages between ship and ship or ship and coast. This may be due to their geographical location or to their range, dependent on power and aerial, or conditions. In some instances actual inspection may be necessary to determine whether a station should be licensed as a coast station or an inland station. An operator or owner in doubt as to the classification of his station

should communicate the facts to the radio inspector of his district when applying for a licence.

40. Stations are bound to give absolute priority to calls of distress from ships, to similarly answer such calls, and to take such action with regards thereto as may be required.

41. The working of stations shall be organised as far as possible in such manner as not to disturb the service of other stations.

42. All coast stations (par. 38), excepting general and restricted amateur stations, are required to be able to transmit on the wavelengths of 300 and 600 metres for the purpose of transmitting or relaying distress messages or signals and messages relating thereto, it necessary.

43. Coast stations primary intended for long waves and long-distance transmission may instal an auxiliary antenna and auxiliary transmitter to comply with the short wavelength requirements.

44. The international standard wavelength is 600 metres, and the operators of all *coast stations* are required, during the hours the station is in operation, to "listen-in" at intervals of not less than fifteen minutes and for a period of not less than two minutes, with the receiving apparatus tuned to receive this wavelength, for the purpose of determining if any distress signals or messages are being sent and to determine if the transmitting operations of the "listening stations" are causing interference with other radio communication.

45. General public service may be defined as "paid business," conducted on commercial wavelengths between ship and shore or ship and ship.

46. Limited public service may be defined as "paid business" between certain designated land stations, ships or lines of ships, and must be conducted on some authorised wavelength other than 300 or 600 metres.

47. All special service must be conducted on some authorised wavelength other than 300 or 600 metres, not interfering with genral public service.

48. Limited commercial, special amateur, and all stations which have no authorised rates, shall not transmit or accept public correspondence from other stations, except in case of emergency.

49. If a general public-service coast station also maintains a limited commercial service with other stations on land or with vessels at sea, the limited commercial service must be conducted on some authorised wavelength other than 300 or 600 metres, but this service can be authorised on a general public-service coast station license without stating the specific hours, it being understood that the limited commercial service is conducted only when no general public service business is on file.

50. If a general public-service coast station also maintains a public service between fixed points on land, the service between the land stations must be conducted on some authorised wavelength other than 300 or 600 metres, and a separate form, No. 761, should be submitted covering "Limited public service," giving the exact hours of such service.

Classification of Land Stations and Grades of Operators Required.

51. Both coast stations (the word "coast stations," "shore stations," and "coastal stations" are used interchangeably) and inland stations are divided for the purposes of the administration of the Act into the following classes:

(1) Public-service stations—
  (*a*) General.
  (*b*) Limited.
(2) Limited commercial stations.
(3) Experiment stations for the development of radio communication.
(4) Technical and training school station.
(5) Special amateur stations.
(6) General amateur stations.
(7) Restricted amateur stations.

52. Class 1.—(*a*) *Public-Service stations, general*, are those open to general business between coast and ships and include those operated by common carriers under the Act of February 4th, 1887, to regulate commerce, amended June 18th, 1910. They are required to maintain a constant *service* when open. Every coastal station open to public service shall at all times be ready to receive messages of such wavelengths as are required by the International Convention in force. (Sec. 4, Regulation 1, Act of August 13th, 1912.) The station rates are authorised in the licence and published in the Official Berne List. Whenever such stations do not insure a constant service, transmitting and receiving day and night without interruption, the Secretary of the Navy is directed to open naval radio stations within 100 miles thereof to public business. (Sec. 4, Regulation 18, Act of August 13th, 1912.) The Secretary of War is authorised by the Act of May 26th, 1900 (31 Stat., 206), to open Alaskan military stations to public service.

53. General public service shall be conducted only by operators holding commercial first-grade licenses or higher.

54. Class 1.—(*b*) *Public-service stations, limited*, are reserved for a limited public service, determined by the object of the correspondence or other circumstances independent of the system employed. Stations of this class transmit and receive public messages to and from certain stations only, which are designated in the license. The rates are authorised in the licenses, and if not published in the official list they may be obtained from the licensee.

55. The service of limited public service *coast* stations shall be carried on by commercial first-grade operators or higher.

56. The service of limited public service *inland* stations shall be carried on by commercial second-grade operators or higher.

57. Class 2.—*Limited commercial stations* are not open to public service and are licensed for a specific commercial service or services defined in the license. Stations of this class must not transmit to or accept public messages from other stations. No rates are authorised.

58. It a coast station, the operators shall hold a commercial second-grade license or higher. (Par. 57.)

59. Class 3.—*Experiment stations.*—The Secretary of Commerce is authorised by section 4 of the Act to grant special temporary licences "to stations actually engaged in conducting experiments for the development of the science of radio communication, or the apparatus pertaining thereto, to carry on special tests, using any amount of power or any wavelengths, at such hours and under such conditions as will insure the least inter-

ference with the sending or receipt of commercial or Government radiograms, of distress signals and radiograms, or with the work of other stations." Applicants for such licences should state any technical result they have already produced, their technical attainments, etc. The fact that an applicant desires to experiment with his equipment does not justify or require a license of this class. Most experiments can be made within the limitations of general and restricted amateur station licenses or by use of an artificial antenna to prevent radiation.

60. Experiment stations may be operated by a person holding an experiment and instruction grade license or higher.

61. CLASS 4.—*Technical and training-school stations* will be licensed, according to the degree of technical training attained and imparted and to local conditions.

62. The grade of operators required will be specified when the license is issued.

63. CLASS 5.—*Special amateur stations* may be licensed by the Secretary of Commerce to use a longer wavelength and a higher power on special application. Applications for this class from amateurs with less than two years' experience in actual radio communication will not be approved. The application must state the experience and purpose of the applicant, the local conditions of radio communication, especially of maritime radio communication in the vicinity of the station, and a special license will be granted only if some substantial benefit to the art or to commerce apart from individual amusement seems probable. (Sec. 4, Regulation 15, Act of August 13th, 1912.)

64. Special amateur *coast* stations must be operated by a person holding a commercial second-grade license or higher. Inland stations may be operated by persons holding amateur second-grade licenses or higher.

65. CLASS 6.—*General amateur stations* are restricted to a transmitting wavelength not exceeding 200 metres and a transformer input not exceeding 1 kw. (Sec. 4, Regulation 15, Act of August 13th, 1912.)

66. CLASS 7.—*Restricted amateur stations*, within five nautical miles of a naval or military station, are restricted to a wavelength not exceeding 200 metres and to a transformer input not exceeding ½ kw. (Sec. 4, Regulation 16, Act of August 13th, 1912.)

67. Amateur first or second grade operators or higher are required for general and restricted amateur stations.

68. The license does not specify the number of operators required, but provides that the station shall at all times while in operation be under the care of an operator licensed for that purpose. The grade and number of operators as required by law is determined by the service of the station.

69. *Special stations for exceptional distances* are land stations designed to carry on trans-oceanic radio communication as between the United States and European countries, or between the Pacific coast and Hawaii, or from the United States over similar long distances at sea to another land station, or (inland) to carry on radio communication overland over exceptional distances. These stations will all come under one of the classifications named above and the license will indicate the stations for which communication is authorised and indicate the range.

REGULATIONS COMMON TO LAND AND SHIP STATIONS.

70. Any change in the characteristics of the radio apparatus or service of the station must be authorised by the Secretary of Commerce.

71. Every land and ship station open to general public service shall have, as a part of the station equipment, a copy of the Official Berne List of Radiotelegraph Stations and supplements thereto, as issued to comply with section 2 of the Act of July 24th, 1910. Information concerning the use of this list and method of procuring it is given on page 72, paragraph 196.

72. The service regulations of the London Convention, Article VII, paragraphs 1 and 2*b*, require a reduction of power or range under certain conditions. A proper resistance, impedance coil, or reactance regulator in the primary circuit is recommended. In certain cases the reduction of voltage or decreasing of coupling may be approved upon recommendations of radio inspectors.

73. Persons or corporations holding licenses for radio stations, either land or ship, if practicable, must submit the license to the radio inspector for the district, whenever the station or vessel goes out of commission for a period exceeding three months. The Commissioner of Navigation should be notified promptly of any intention to suspend or discontinue the service of any commercial station.

74. If there is no intention to resume the same service or if the station or vessel will enter a different service from that indicated by the license, the radio inspector will submit the license to the Bureau, together with a statement of the facts. Otherwise the radio inspector may retain the license in his files for safe keeping until the date of its expiration, when it will be forwarded to the Bureau for cancellation.

75. When the station goes into commission the owner may apply to the radio inspector for the return of the license. The radio inspector will satisfy himself that the station corresponds to the schedule of the station as shown in the license, and if so, the license will be returned.

76. Stations desiring to conduct tests should communicate with the radio inspector by letter or telephone, stating the probable length of time that will be required. Stations conducting such tests or temporary experiments should "listen-in," to determine that no interference is being caused, and during the tests should "listen-in" frequently for the interference signal, "QRM." Stations conducting tests should transmit their official call signal frequently. Attention is invited to the Act of August 13th, 1912, section 5:

> That every license granted under the provisions of this Act for the operation or use of apparatus for radio communication shall prescribe that the operator thereof shall not wilfully, or maliciously interfere with any other radio communication. Such interference shall be deemed a misdemeanour, and upon a conviction thereof the owner or operator, or both, shall be punishable by a fine not to exceed five hundred dollars or imprisonment for not to exceed one year, or both.

77. The Department holds that interference caused by tests of the character described above (par. 76) is "wilful" when no "listening-in" precautions are taken and the call signal

of the station sending is not repeated at intervals.

APPLICATIONS FOR SHIP AND LAND STATION LICENSES, RENEWALS, AND DUPLICATES.

78. The Act does not apply either afloat or ashore to—

(*a*) Apparatus for radio communication which merely receives radiograms and is not equipped for sending.

(*b*) Apparatus for the transmission of radiograms exclusively between points in the same State, if the effect of such transmission does not extend beyond the State (so as to interfere with the radio communication of other States), or if the effect of such transmission does not interfere with the reception of radiograms from beyond the State (so as to interfere with the interstate radio communication of that State).

(*c*) Apparatus for radio communication which has been issued to the Organised Militia by the War Department or to the Naval Militia by the Navy Department and is used for official purposes only.

79. The owner or operator of any apparatus who may be in doubt whether his apparatus, under this paragraph, is exempt from license may write the facts to the radio inspector for his district before applying for a license.

80. The apparatus for transmission of radiograms, or signals on any vessel of the United States not permanently moored, requires a license.

81. Apparatus for radio communication on land within the jurisdiction of the United States (excluding the Philippine Islands and excluding apparatus of the Government of the United States) must be licensed if—

(*a*) The apparatus is a means of commercial intercourse among the several States or with foreign nations; or

(*b*) The apparatus transmits radiograms or signals the effect of which at any time extends beyond the State; or

(*c*) The apparatus interferes with the receipt of messages in any State from beyond such State.

82. Station licenses for the use and operation of apparatus for radio communication under the Act may be issued only to citizens of the United States or Porto Rico or to a company incorporated under the laws of some State or Territory or of the United States or Porto Rico.

83. Licenses can be issued to clubs if they are incorporated or if a member will accept the responsibility for the operation of the apparatus, carrying with it the possibility of being penalised for infraction of the laws.

84. Applications for station licenses of all classes should be addressed to the United States Radio Inspector for the district in which the station is located, who will forward the necessary blank forms and information. The limits of the districts and addresses of radio inspectors are given on page 68, paragraph 166.

85. Upon receipt of the forms, properly completed, the radio inspector will make a thorough inspection of the station if practicable.

86. When applications and forms have been properly submitted, ship and amateur stations may be operated in accordance with the laws and regulations governing the class of station for which application for license has been made, until such time as the application can be acted upon unless the applicant is otherwise instructed and provided temporary official call letters are assigned.

87. General and restricted amateur-station licences are issued directly by radio inspectors. Station licences of all other classes are issued from the office of the Commissioner of Navigation, Department of Commerce. Applications and forms are forwarded by radio inspectors with recommendations by them.

88. Stations desiring to operate different portions of the day under different classifications shall submit application for each service, giving exact hours for each. If approved, each classification will be specified in the license.

89. The owner of an amateur station may operate his station in accordance with the laws if his application for a license has been properly filed, but has not been acted upon. An application for an operator's license must also have been filed, and every effort made to obtain the license before the station may be operated.

90. "Provisional" station licenses are issued to amateurs remote from the headquarters of the radio inspector of the district in which the station is located. These licenses are issued as a matter of convenience and record. If, under inspection, the station is found to comply with the law, the inspector will strike out the word "Provisional" and insert the date of inspection and his signature at the bottom of the license.

91. If such a station is found not to comply with the law the provisional license may be cancelled until such time as the apparatus is readjusted to meet the requirements of the law: *Provided, however,* That consideration will be given to any reports of interference filed against such a station.

92. All persons are warned that it is unlawful to operate stations after licenses have expired unless application for renewal has been properly made.

93. Owners desiring to renew licenses must complete new forms as prescribed for original applications. Amateur-station licenses issued on current forms may be renewed by the following endorsement on the back, provided no changes in the equipment or location have been made; otherwise a new license will be issued: "This license renewed for one year. Radio Inspector." The Commissioner of Navigation will be notified of the name and call signal in every case of renewal in this manner.

94. Any person applying for a duplicate licence to replace an original which has been lost, mutilated, or destroyed will be required to submit an affidavit to the Bureau of Navigation through the radio inspector of the district, attesting the facts regarding the manner in which the original was lost. The Commissioner of Navigation will consider the facts in the case and advise the radio inspector in regard to the issue of a duplicate licence or a duplicate will be forwarded through the inspector's office.

95. A duplicate license will be issued under the same serial number as the original and will be marked "Duplicate" in red across the face.

REGULATIONS GOVERNING RADIO OPERATORS.

CLASSES, GRADES AND REQUIREMENTS.

E 96. (1) Commercial extra first grade; (2) commercial first grade; (3) commercial second grade; (4) commercial cargo grade; (5) commercial

temporary permit; (6) experiment and instruction grade; (7) amateur first-grade; (8) amateur second grade.

97. The Service Regulations of the International Convention require that "the service of the station on shipboard shall be carried on by a telegraph operator holding a certificate issued by the Government to which the vessel is subject."

98. Such certificates shall attest the professional efficiency of the operator as regards—

(*a*) Adjustment of the apparatus and knowledge of its functioning;

(*b*) Transmission and acoustic reception at the rate of not less than twenty words a minute (Continental Morse) for commercial first-grade operators and not less than twelve words per minute for second-grade operators;

(*c*) Knowledge of the regulations governing the exchange of wireless telegraph correspondence.

(*d*) The certificate shall furthermore state that the Government has bound the operator to secrecy with regard to the correspondence.

99. The International Convention has been ratified by the principal maritime nations, dominions and provinces. Radio operators holding valid certificates issued by foreign Governments which are parties to the convention will be recognised by this department as persons "skilled in the use of such apparatus" within the meaning of the Act, unless in the case of a specific individual there may be special reason to doubt the operator's skill and reliability. Such certificates should be ready at hand for the inspection of radio inspectors or customs officers before the steamer departs from the United States.

100. In the case of a vessel subject to the Act under the flag of any nation not a party to the International Convention, the radio operator, before the departure of the vessel from the United States, must furnish to the inspector evidence that he is "skilled in the use of the apparatus." This evidence shall consist of an examination on board by the radio inspector.

101. *Commercial extra first class.* — The Department of Commerce will issue a special license, to be known as commercial extra first grade to radio operators whose trustworthiness and efficient service entitle them to confidence and recognition.

102. These licenses will be given consideration by the Civil Service Commission in examinations for positions requiring knowledge of radiotelegraphy, when experience is rated as a part of such examinations.

103. Applicants for the commercial extra first-grade license must pass a special examination. To be eligible for this examination they must hold commercial first-grade licenses, and their certificates of skill in radio communication, issued under the Act of June 24th, 1910, or licenses under the Act of August 13th, 1912, must record eighteen months' satisfactory commercial service at sea or at land stations, either or both, during the two years previous to the filing of the application for examination, as shown by endorsement on the license service records, or other satisfactory evidence, and provided that the applicants have not been penalised for a violation of the radio laws and regulations.

104. A speed of at least thirty words per minute Continental Morse, and twenty-five words per minute, American Morse (five letters to the word), must be attained. The technical questions and the questions on the radio laws and regulations will be considerably wider in scope than those for commercial first grade, and a higher percentage will be required.

105. All examination papers, including the code test sheets, will be marked and forwarded to the Commissioner of Navigation, with a recommendation by the radio inspector or examining officer. Examination papers will be marked upon the basis of 100, and licences will be recommended only if eighty or better is attained.

106. Licenses of this grade will be issued by the Commissioner of Navigation, endorsed by the Secretary of Commerce, and delivered to the successful applicant through the examining officer.

107. *Commercial first class.*—The applicant must pass a satisfactory examination in—

(*a*) The adjustment, operation, and care of the apparatus, including correction of faults and change from one wavelength to another.

(*b*) Transmitting and receiving by ear at a speed of not less than twenty words a minute in Continental Morse (five letters to the word).

(*c*) Use and care of storage battery or other auxiliary power apparatus.

(*d*) Knowledge of the international regulations in force applying to radio communication.

(*e*) Knowledge of the requirements of the Acts of Congress to regulate radio communication (secs. 3, 4, 5, 6, and 7 of the Act of August 13th, 1912).

108. The commercial extra first grade and the commercial first-grade licenses qualify holders for employment at any ship or land station of any class.

109. *Commercial second class.*—The applicant must pass a satisfactory examination in all the subjects prescribed above for the first grade, with the exception that the minimum speed in transmitting and receiving shall not be less than twelve words a minute in Continental Morse, and the examination in the subjects will not be as comprehensive as that given first-grade operators.

110. *Commercial cargo grade.*—Section 2 of the Act of July 23rd, 1912, provides: "On cargo steamers, in lieu of the second operator provided for in this Act, there may be substituted a member of the crew or other person who shall be duly certified and entered in the ship's log as competent to receive and understand distress calls or other usual calls indicating danger, and to aid in maintaining a constant wireless watch so far as required for the safety of life."

111. The examination will be conducted so as to determine the following facts:

(*a*) That the applicant is sufficiently familiar with the Continental Morse Code to recognise the distress signal (SOS), when included in a list of other words or signals sent slowly (approximately five words a minute).

(*b*) That the applicant is sufficiently familiar with the Continental Morse Code to recognise radio call letters of the vessel on which he desires to operate when sent slowly and repeated several times.

(*c*) That the applicant is sufficiently familiar with the type of the receiving

apparatus of the vessel on which he desires to operate to determine by buzzer or similar test that the detector or receiving apparatus is properly adjusted to receive signals.

112. Examining officers and radio inspectors are authorised to issue a certificate, in the form of an amateur first-grade license, after examination, to indicate the facts above enumerated in the case of a member of the crew or other person, and experience under this form will be credited by examining officers if the holder later applies for examination for a commercial licence. These licenses will be marked "Cargo" in the upper right-hand corner under the serial number.

113. *Commercial temporary permit.*—Section 3 of the Act of August 13th, 1912, provides: "In case of emergency the Secretary of Commerce may authorise a collector of customs to issue a temporary permit, in lieu of a license, to the operator on a vessel subject to the Radio Ship Act of June 24th, 1910."

144. The temporary permit, in the form of a letter to the operator, is to be issued only in cases of emergency and will be valid for one voyage from   to
beginning   , unless the proper license or properly licensed operator can be obtained en route.

115. The permits should be issued only to persons who the collector of customs has reason to believe are skilled in the use of the apparatus, but have not had the opportunity to present themselves for examination before Government officers authorised to conduct examinations and furnish licenses.

116. The collector of customs will forward to the Department of Commerce (Bureau of Navigation) a report covering each temporary permit issued and the reasons for its issue.

117. *Experiment and instruction grade.*—Experimenters and instructors of scientific attainments in the art of radio communication whose knowledge of the radio laws satisfies the radio inspector or the examining officer may obtain this grade license, provided they are able to transmit and receive in the Continental Morse Code at a speed sufficient to enable them to recognise distress calls or the "keep-out" signals.

118. The operator's license for this grade is a commercial license, endorsed by the Secretary of Commerce with a statement of the special purpose for which it is valid.

119. If the applicant qualifies, the radio inspector or examining officer will forward the papers to the Commissioner of Navigation, with his recommendation. If approved, the license will be properly endorsed by the Secretary of Commerce and delivered to the licensee through the recommending officer.

120. This license has no reference to the instruction of radio operators as such, but is required by those operating apparatus licensed as experimental stations but who are unable to obtain commercial grade operators' licenses.

121. Amateurs before applying for licenses should read and understand the essential parts of the International Radiotelegraphic Convention in force and sections 3, 4, 5, and 7 of the Act of August 13th, 1912. The Department recognises that radio communication offers a wholesome form of instructive recreation for amateurs. At the same time its use for this purpose must observe strictly the rights of others to the uninterrupted use of apparatus for important public and commercial purposes. The Department will not knowingly issue a license to an amateur who does not recognise and will not obey this principle. To this end the intelligent reading of the International Convention and the Act of Congress is prescribed as the first step to be taken by amateurs. A copy of the radio laws and regulations may be procured for this purpose from the radio inspectors or from the Commissioner of Navigation, Department of Commerce, Washington, D.C., but they are not for public distribution. Additional copies may be purchased from the Superintendent of Documents, Government Printing Office, Washington, D.C., at a nominal price.

122. *Amateur first grade.*—The applicant must have a sufficient knowledge of the adjustment and operation of the apparatus which he wishes to operate and of the regulations of the International Convention and Acts of Congress in so far as they relate to interference with other radio communication and impose certain duties on all grades of operators. The applicant must be able to transmit and receive in Continental Morse at a speed sufficient to enable him to recognise distress calls or the official "keep-out" signals. A speed of at least ten words per minute (five letters to the word) must be attained.

123. *Amateur second grade.*—The requirements for the second grade will be the same as for the first grade. The second-grade license will be issued only where an applicant cannot be personally examined or until he can be examined. An examining officer or radio inspector is authorised in his discretion to waive an actual examination of an applicant for an amateur license, if the amateur for adequate reasons cannot present himself for examination but in writing can satisfy the examining officer or radio inspector that he is qualified to hold a license and will conform to its obligations.

Examinations.

124. The following requirements and method of conducting examination for radio operators' licenses will be adopted at all examining offices.

125. The test shall consist of messages with call letters and regular preambles, conventional signals and abbreviations and odd phrases, and shall in no case consist of simple, connected reading matter. The test will be conducted by means of the omnigraph or other automatic instrument wherever possible.

126. The test shall continue for five minutes at a speed of twenty words, twelve words and ten words per minute, respectively, for the commercial first, second, and lower grades, and to qualify the applicant must receive twenty, twelve, or ten words in consecutive order.

127. The code test sheets written by the applicant will be forwarded to the Commissioner of Navigation with other papers and the speed attained noted in the lower left-hand corner of the first sheet.

128. An applicant will be given credit for the maximum speed he can attain.

129. The practical and theoretical examination shall consist of seven comprehensive questions under the following headings and values:

	Points, maximum value.
(*a*) Experience	20
(*b*) Diagram of receiving and transmitting apparatus	10
(*c*) Knowledge of transmitting apparatus	20
(*d*) Knowledge of receiving apparatus	20
(*e*) Knowledge of operation and care of storage batteries	10
(*f*) Knowledge of motors and generators	10
(*g*) Knowledge of international regulations governing radio communication and the United States radio laws and regulations	10
	100

130. Seventy-five constitutes a passing mark for the first-grade commercial. Sixty-five constitutes a passing mark for the second-grade commercial.

131. Applicants who fail to attain twenty words in the code test but who attain a mark of between sixty-five and seventy-five in the written examination may be issued second-class licenses, if they can receive at least twelve words per minute.

132. Question (*a*) shall determine the applicant's practical knowledge and experience in handling radio apparatus. An applicant's experience will be determined largely from the personal question sheet, and from satisfactory letters or references submitted. Experience, operating first-class amateur apparatus, or the apparatus provided in good training schools, will be given a reasonable value, but applicants who have had experience as apprentices at commercial shore stations or on board vessels will receive higher marks.

133. No applicant who fails to qualify will be re-examined at any examining office within three months from date of the previous examination. All examination papers, whether the applicant qualifies or not, will be forwarded to the Bureau of Navigation for filing as "Operator's record." When the records of the Bureau develop the fact that an applicant has failed to qualify and has applied for re-examination or been re-examined at the same or another office within three months, his existing license may be suspended or revoked by the Secretary of Commerce. Applicants to whom are issued second-grade licences will not be examined for first-grade within three months under the same rule.

Places where Examinations are Held.

134. (Excised.)

135. Naval radio stations: San Juan, P.R.; Colon, R.P.; Honolulu, H.T.

136. United States Army stations: Fort St. Michael, Alaska; Fort Valdez, Alaska.

137. Bureau of Navigation, Department of Commerce, Washington, D.C.

138. Radio inspectors, at their offices and elsewhere, by special arrangement.

139. Additional opportunities for taking the examination will be afforded as may be deemed necessary, and these special dates and places may be ascertained by communication with the Commissioner of Navigation, or nearest radio inspector.

140. All licenses, when awarded, will be delivered through the officer who conducted the examination.

141. Examinations for the commercial extra first-grade licenses will be held at the following offices only by appointment.

142. (Excised.)

143. United States radio inspectors, customhouses: New Orleans, La.; San Francisco; Cal.; Seattle, Wash.; Chicago, Ill.; Boston, Mass.; New York, N.Y.; Baltimore, Md.; Detroit, Mich., Norfolk, Va.

144. Commissioner of Navigation, Department of Commerce, Washington, D.C.

145. In special cases, upon application to the Commissioner of Navigation, arrangements may be made for examinations at other points.

Applications for Examinations for Radio Operators' Licenses, Renewals, and Duplicates.

146. An operator's license may be granted to any person without regard to sex, nationality or age if the applicant can fulfil the requirements for the class of license desired.

147. Applicants for licenses should communicate in writing with the commandants, commanding officers, or officers in charge at navy yards, and army posts, with the Commissioner of Navigation, or radio inspectors, in order to fix the date when they can be examined. (See pars. 134-145.)

148. Commercial licenses can only be obtained by personal examination. Where applicants are at remote points or cannot proceed to examining offices, efforts will be made to examine them through radio inspectors when they are in that vicinity, but special trips cannot be made for that purpose.

149. Amateurs should write to the nearest examining officer in their vicinity (see pars. 134-145) for Form 756 (application for operator's license) and to the radio inspector in their vicinity for Form 762 (application for license for land station). If the application for operator's license is also made to the radio inspector, both applications should be forwarded in the same envelope.

150. Amateur operators at points remote from examining officers and radio inspectors may be issued second-grade amateur licenses without personal examination. Examinations for first-grade licenses will be given by the radio inspector when he is in that vicinity, but special trips cannot be made for this purpose (see par. 123).

151. Persons holding radio operator's licenses, amateur second grade, should make every effort to appear at one of the examination points to take the examination for amateur first-grade license or higher.

152. Persons holding radio operator's licenses of any class or grade should, before their licenses expire, apply to the nearest radio inspector or examining officer for renewal and submit Form 756 in duplicate.

153. Radio operators of the commercial class or cargo grade whose licenses show on the service records satisfactory service for three months out of the last six months of the license term may be issued new licenses without re-examination. Other operators who submit satisfactory evidence to the examining officer, showing actual operations of radio apparatus for three months during the last six months of the license term, may be issued new licenses without re-examination. All others will be re-examined in the usual manner.

154. Whether or not a new license is issued, the radio inspector or examining officer will forward one copy of Form 756, properly

completed, to the Commissioner of Navigation, Department of Commerce. If a new license is not issued, the reason therefor will be stated on the back of the form.

155. Any operator applying for a duplicate license to replace an original which has been lost, mutilated, or destroyed will be required to submit an affidavit to the Bureau of Navigation through the radio inspector or examining officer who issued the original, attesting the facts regarding the manner in which the original was lost. The Commissioner of Navigation will consider the facts in the case and advise the radio inspector in regard to the issue of a duplicate license. A duplicate license will be issued under the same serial number as the original and will be marked "Duplicate" in red across the face.

156. Operators' licenses are not valid until the oath for the preservation of the secrecy of messages is properly executed before a notary public or other officer duly authorised to administer oaths. Licenses must indicate on their faces that the oath has been taken and the officer administering the oath on the back of the license should sign also in the blank provided on the face.

157. Operators' licenses should be framed and posted in the radio room, and licenses for stations should be accessible at all times to inspectors.

158. Under the supervision of a licensed operator an apprentice or unlicensed person may learn the art by the actual use of the apparatus, but the licensed operator who fails to enforce obedience to the regulations by the apprentice or unlicensed person serving under his supervision is liable to penalties as if he had himself violated the regulations.

159. An individual record is kept in the Bureau of Navigation, Department of Commerce, at Washington, of each licensed operator. Each operator's examination papers and all reports in regard to interference or violations of the radio laws and regulations are filed for reference.

160. Radio operators holding licenses of any grade or class and applying for examination for any other grade or class must submit to the examining officer Form 756, in duplicate. If a new license is issued the license held by the applicant must be surrendered.

161. Radio operators who pass the examination for a higher class or grade license are required to surrender their existing licenses, which will be forwarded to the Commissioner of Navigation with the other papers.

162. Operators desiring to retain their expired or cancelled licenses may make application therefor to the Commissioner of Navigation.

GENERAL INFORMATION.

Administration and Administrative Districts.

163. The Department has established, for the purpose of enforcing, through radio inspectors and others, the acts relating to radio communication and the International Convention, the following districts, with the principal office for each district at the custom house of the port named.

164. Communications for radio inspectors should be addressed as follows, and not to individuals: Radio Inspector, Customhouse, (city), (State).

165. Communications for the Bureau of Navigation should be addressed as follows, and not to individuals: Commissioner of Navigation, Department of Commerce, Washington, D.C.

166. (1) Boston, Mass.: Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut.

(2) New York, N.Y.: New York (county of New York, Staten Island, Long Island, and counties on the Hudson River to and including Schenectady, Albany, and Rensselaer) and New Jersey (Counties of Bergen, Passaic, Essex, Union, Middlesex, Monmouth Hudson, and Ocean).

(3) Baltimore, Md.: New Jersey (all counties not included in second district), Pennsylvania (counties of Philadelphia, Delaware, all counties south of the Blue Mountains, and Franklin County), Delaware, Marlandy, Virginia, District of Columbia.

(4) Savannah, Ga.: North Carolina, South Carolina, Georgia, Florida, Porto Rico.

(5) New Orleans, La.: Alabama Missis sippi, Louisiana, Texas, Tennessee, Arkansas, Oklahoma, New Mexico.

(6) San Francisco, Cal.: California, Hawaii, Nevada, Utah, Arizona.

(7) Seattle, Wash.: Oregon, Washington, Alaska, Idaho, Montana, Wyoming.

(8) Detroit, Mich.: New York (all counties not included in second district), Pennsylvania (all counties not included in third district), West Virginia, Ohio, Michigan (Lower Peninsula).

(9) Chicago, Ill.: Indiana, Illinois, Wisconsin, Michigan (Upper Peninsula), Minnesota, Kentucky, Missouri, Kansas, Colorado, Iowa, Nebraska, South Dakota, North Dakota.

Reporting of Violations.

167. The regulations established by law, or by the authority of law, or of the International Convention, will be enforced by the Secretary of Commerce through collectors of customs, radio inspectors, and other officers of the Government.

168. The service regulations of the radiotelegraphic Convention in force provide that "no station on shipboard shall be established or worked by private enterprise without authority from the Government to which the vessel is subject." Such authority shall be in the nature of a license issued by said Government. Stations on foreign ships will be licensed by their Governments respectively. Inspectors will report to the Commissioner of Navigation stations on foreign ships not so licensed.

169. A radio inspector is authorised in exceptional cases to act outside of his district for the convenience of commerce. In such cases he will communicate before or after acting with the inspector in whose district he has acted. Radio inspectors are authorised to communicate directly with collectors of customs and to co-operate with them in the enforcement of the law.

170. Violations of the laws and regulations will be reported to the chief customs officer of the district in which the offence occurs, who will report the case to the Secretary of Commerce (Bureau of Navigation), according to the procedure followed in violations of the navigation laws. Misdemeanours will be reported to the United States district attorney in the usual manner.

171. Collectors of customs and radio inspectors are enjoined that the reports required by paragraph 170 must be precise statements of the facts as the basis for possible proceedings by the United States attorney.

172. Violations by the master of a vessel of the United States of the provisions of the second paragraph of section 1 of the ship act will be reported to the collector of customs directly, and the usual procedure in cases of fines and penalties will be followed.

Inspection of Ship Stations.

173. The radio inspectors and customs officers, as far as practicable shall visit steamers subject to the act before they leave port and ascertain if they are equipped with the apparatus in charge of the operators prescribed by law and regulation.

174. When the radio apparatus is certified as complying with the requirements of law by the competent authorities of a foreign Government, such certificate will be recognised by this Department, but the radio inspector or customs officer may, if he deem it necessary or desirable, satisfy himself that the apparatus is in good working order.

175. Whenever practicable the radio inspector shall satisfy himself on his visit before the departure of a steamer subject to the act of July 23rd, 1912, that the apparatus is efficient and in good working order within the meaning of the Act, and if satisfied he shall issue a certificate in the form of Appendix A (form 752). The duplicate of these certificates will be filed with the collector of customs as a record of the radio equipment on vessels sailing from his port.

176. These certificates will be issued only if the inspection is made within two hours of sailing time.

177. For each clearance the master of a steamer coming under the Act of July 23rd, 1912, is required to furnish to the customs officer a certificate in the form in Appendix B (Form 753). Such certificate shall be retained in the files of the collector of customs. Whenever the radio inspector is absent from his home port he will notify the collector of customs, who will arrange for the collection of certificates and survey of equipment.

178. Where a steamer subject to the radio law is without the apparatus and the operators prescribed, or either of them, and is about to attempt to leave port, the radio inspector or customs officer visiting the vessel shall:

(*a*) Furnish the master with a memorandum (stub of Form 771) of the particulars in respect of which the law has not been complied with and the penalty;

(*b*) if convenient, notify the vessel's agents or the proper person in charge of the apparatus so that the necessary corrections may be made before sailing.

179. If a steamer clears in violation of the law the radio inspector or customs officer shall submit to the collector of customs of the port a written report, stating the exact nature of the violation, the section of the law violated, and the penalties involved and all of the circumstances in connection therewith which will be of service to the collector and to the Secretary of Commerce in determining what action shall be taken. A copy of the report will be forwarded to the Commissioner of Navigation.

180. Statements should be obtained from operators, ships officers, or other witnesses at the time the violation is discovered and should accompany the report to the collector of customs.

181. The collector of customs will report the case to the Secretary of Commerce in the usual manner as a navigation fine case.

182. Merchant vessels chartered by the United States Government are subject to the Act of August 13th, 1912, in every case, if the radio apparatus is owned and operated by a commercial company.

183. Merchant vessels chartered by the United States Government for the transportation of persons or supplies are subject to the requirements of the ship act (Act of July 23rd, 1912), if the vessel is controlled and operated by the owners. Vessels commanded wholly or in part by Government officers are not subject to the ship act.

184. Government vessels or vessels charted by the Government are subject to the act of August 13th, 1912, if the radio equipment is owned and operated by private interests.

185. The ship act does not authorise the refusal of clearance in case of violation of its provisions, but specifically provides for the imposition of a fine in a sum not more than $5,000.

186. The act does not apply to a vessel at the time of entering a port of the United States. Radio inspectors and customs officers may, however, accept as evidence of the efficiency of the operators and the skill of an operator messages shown to have been transmitted and received by him over a distance of at least 100 miles, by day, during the voyage to the United States.

Operators on Foreign Vessels.

187. In so far as licensed operators are concerned a sharp distinction should be drawn between the Act of July 23rd, 1912, which requires apparatus and operators for radio communication on steamers and the Act of August 13th, 1912, to regulate radio communication.

188. The Act of July 23rd, 1912, amending the Act of June 24th 1910, is designed to promote safety at sea through the employment of apparatus and operators to transmit and receive distress calls and other calls relating to perils and aids to navigation. It provides that in the case of American and foreign vessels subject to its provisions "the radio equipment must be in charge of two or more persons skilled in the use of such apparatus." This Act does not require that the operators shall be licensed, and the penalty prescribed in section 3 of the Act is not incurred by the master of a vessel whose operators are "skilled in the use of such apparatus," even though they may not be licensed.

189. The Act of August 13th, 1912, is designed to execute in behalf of the United States the International Radiotelegraphic Convention and thus to promote orderly exchanges by radio communication. For this purpose the International Radiotelegraphic Convention (Service Regulations) provides that the service of the station on shipboard shall be carried on by a telegraph operator holding a certificate issued by the Government to which the vessel is subject.

190. Section 3 of the Act of August 13th, 1912, carries out this provision of the International Convention by providing licenses for operators on American vessels. If an unlicensed person serves in charge or in supervision of the use and operation of the apparatus both he and his employer are liable to a fine of not more than $100 or imprisonment for not more than two months or both. This section and penalty do not apply to operators on foreign ships. But operators on the ships of foreign nations signatory to the International Radiotelegraphic Convention, as shown above,

are required to have certificates or licenses from their own governments, and if not so certificated, the obligations of the convention have not been observed. The convention in the Service Regulations provides for this situation.

191. The Act of July 23rd, 1912, as stated, requires that on American and foreign ships the operators must be "skilled in the use of such apparatus," but does not require that they must be licensed. To facilitate commerce and simplify administration, operators presenting American licenses or foreign certificates are accepted as "skilled in the use of such apparatus," except where there may be special reasons to doubt the operator's skill or reliability. Where operators on American or foreign ships do not have such licences or foreign certificates, radio inspectors or customs officers under the Act of July 23rd, 1912, may accept other competent evidence of skill or may examine such operators.

Official International List or Coast and Ship Radio Stations of the World and Station Rates.

192. The list of land and ship stations of the United States including amateurs, giving call letters, wavelengths, nature of service, etc., can be procured from the Superintendent of Documents, Government Printing Office, Washington, D.C., at a nominal price.

193. Supplements to this list are issued monthly and the list is revised annually, as of July 1st. Information concerning amateur stations will not be included in the supplements, but in the annual edition only.

194. The introduction to the list of "Radio Stations of the United States" contains information concerning the assignment of international and amateur call letters.

195. A copy of the Official Berne List, and supplements as issued, are required as a part of the equipment of every station open to general public service.

196. The International List of Radio Stations of the World (edition in English) can be procured from the International Bureau of the Telegraphic Union (Radiotelegraphic Service), Berne, Switzerland.

197. In addition to the information contained in the pamphlet of the United States stations, published by the Bureau of Navigation, the international list shows geographical locations, normal ranges in nautical miles, radio systems and rates.

198. The international list includes the Government and commercial land and ship stations of the United States. The list is divided into three parts. The first part contains a list of ship stations, grouped by countries and arranged alphabetically; the second part contains a list of land stations arranged in the same manner; and the third part contains tables of land line and cable charges from coast radio stations to inland and various other points. In computing the total word rate applicable to a radiogram from a ship station to an inland point or *vice versa*, the three rates must be added. The rates in the international list are stated in francs. For approximate purposes 1 franc equals 20 cents and 5 centimes equals 1 cent. Supplements to the international list will be issued monthly, and will contain new stations and tables of alterations.

199. The International Alphabetical List of Call Letters (stations of the world) is also issued by the international bureau at Berne, and supplements will be issued monthly.

200. Neither the international list proper nor the supplements will contain a list of amateur stations.

201. Inquiries as to the subscription price of these lists should be made direct to the Berne bureau, at the address given above. (See par. 196.) Remittances to Berne should be made by international postal money order.

Miscellaneous Information.

202. Stations equipped to receive only do not require licenses.

203. Operators of receiving stations do not require licenses, but *all persons* are required to maintain secrecy in regard to messages, as provided in the Act of August 13th, 1912, nineteenth regulation of section 4.

204. Distances under the radio laws are computed in nautical miles.

205. No fees are charged for any operator or station license.

206. Licensed stations must be operated by or under the direct supervision of properly licensed operators.

207. Amateur stations within five miles of naval or military stations need not have been in actual operation on or before August 13th, 1912, to obtain a license for a restricted amateur station.

208. The master of a vessel shall have the right to censor all messages addressed to or transmitted by a radio telegraph station on board his vessel, but such master shall not divulge to any person (other than the properly authorised officials of the Government, or a competent legal tribunal) or make any use whatever of any message coming to his knowledge through the exercise of such censorship, nor shall the master or any operator divulge to any person (other than the properly authorised officials of the Government, or a competent legal tribunal) or make any use whatever of any message (other than a message of distress) coming to his knowledge and not intended for the said station.

209. The transmission of superfluous signals by any ship or coast station is absolutely prohibited; trials and practices are forbidden except under such circumstances as to preclude the possibility of interference with other stations.

210. No person shall transmit or make a signal containing profane or obscene words or language.

211. Additional or amendatory regulations will be issued from time to time as they may appear necessary.

Radio Service Form 752.

CERTIFICATE OF RADIO INSPECTION.

Port of

19

GThis is to certify that I have to-day examined the apparatus for radio communication on the s.s. of which is master, about to leave this port for , and I have found the same efficient and in good working order, as prescribed by the Act of June 24th, 1910, as amended by the Act of July 23rd, 1912.

(Signed)

Radio Inspector.

(Or)

Customs Inspector.

Radio Service Form 753.

MASTER'S CERTIFICATE OF RADIO APPARATUS.

NOTICE.

H The radio equipment must be in charge of two or more persons skilled in the use of such apparatus, one or the other of whom shall be on duty at all times while the vessel is being navigated. Such equipment, operators, the regulation of their watches, and the transmission and receipt of messages, except as may be regulated by law or international agreement, shall be under the control of the master, in the case of a vessel of the United States; and every wilful failure on the part of the master to enforce at sea the provisions of this paragraph as to equipment, operators, and watches shall subject him to a penalty of one hundred dollars. (Act of July 23rd, 1912.)

PORT OF

19

This is to certify that I have to-day examined the apparatus for radio communication on the S.S. , of which I am master, about to leave this port for , and I have found the same efficient and in good working order, as prescribed by the Act of June 24th, 1910, as amended by the Act of July 23rd, 1912.

(Signed) , *Master.*

No.

RADIO SERVICE FORM 753A.

RADIO DECLARATION.

(To be submitted in duplicate.)

I NOTICE.—"The radio equipment must be in charge of two or more persons skilled in the use of such apparatus, one or the other of whom shall be on duty at all times while the vessel is being navigated. Such equipment, operators, the regulation of the r watches, and the transmission and receipt of messages, except as may be regulated by law or international agreement, shall be under the control of the master, in the case of a vessel of the United States; and every wilful failure on the part of the master to enforce at sea the provisions of this paragraph as to equipment, operators, and watches shall subject him to a penalty of one hundred dollars." —*Act of July 23rd*, 1912.

LICENSE FOR GENERAL PUBLIC SERVICE COAST RADIO STATION.

DEPARTMENT OF COMMERCE.

BUREAU OF NAVIGATION.

RADIO SERVICE.

K Pursuant to the Act to regulate radio communication, approved August 13th, 1912, , a citizen of the State of

....

a company incorporated under the laws of the State of having applied therefor, is hereby granted by the Secretary of Commerce for a period of on and subject to the restrictions and conditions hereinafter stated and revocable for cause by him, this license to use or operate the apparatus for radio communication (identified in the schedule hereinafter) located in the State of city or town of , for the purpose of transmitting to and receiving from ship stations and other land stations general public correspondence, Government and service correspondence, and distress signals and messages, at rates of compensation not in excess of those fixed by the international agreement to which the Government of the United States has adhered, which have been submitted to and approved by the Secretary of Commerce, as included in the schedule hereinafter.

2. The use or operation of apparatus for radio communication pursuant to this license shall be subject also to the articles and regulations established by the International Radiotelegraphic Convention, ratified by the Senate of the United States and caused to be made public by the President "to the end that the same and every article and clause thereof may be observed and fulfilled with good faith by the United States and the citizens thereof, and shall be subject also to such regulations

as may be established from time to time by authority of subsequent acts and treaties of the United States.

3. The authority conferred by this license is subject to the provisions of the Act of February 4th, 1887, entitled "An Act to regulate commerce," as amended by the Act of June 18th, 1910, so far as the licensee may be within the operation of said Act, and except as provided in the Act of August 13th, 1912, or in the International Radiotelegraphic Convention and regulations made part thereof, the station shall transmit all messages offered by those who tender lawful rates on equal terms without discrimination, whether as regards rates, order of transmission, or otherwise.

4. The licensee shall render to the Secretary of Commerce such accounts as the Secretary of Commerce shall direct in respect of all charges due or payable under the International Radiotelegraphic Convention in respect of messages exchanged between the station hereby licensed and other stations and shall pay to the Secretary of Commerce, at such times and in such manner as the Secretary of Commerce shall direct, all sums which shall be due from the licensee under such accounts.

5. The apparatus shall at all times while in use and operation be in charge or under the supervision of a person or persons licensed for that purpose by the Secretary of Commerce, and the operator of the apparatus shall not wilfully or maliciously interfere with any other radio communication.

6. The station shall give absolute priority to signals and radiograms relating to ships in distress; shall cease all sending on hearing a distress signal; and, except when engaged in answering or aiding the ship in distress, shall refrain from sending until all signals and radiograms relating thereto are completed.

7. The station during the hours of operation shall listen-in at intervals of not less than 15 minutes and for a period of not less than two minutes with the receiver tuned to receive messages of 300 metres wavelength.

8. The station shall use the minimum amount of energy necessary to carry out any communication desired, except in case of signals or radiograms relating to vessels in distress.

9. The station shall exchange radiograms with any other commercial station and with any ship station without distinction of the radio systems adopted by such stations.

10. The station shall not use a transmitter during the first 15 minutes of each hour, local standard time, except for distress signals, whenever the Secretary of Commerce by notice in writing shall require it to observe a division of time, pursuant to the Twelfth Regulation by the Act of August 13th, 1912.

11. The President of the United States in time of war or public peril or disaster is authorised by law to close the station and cause the removal therefrom of all radio apparatus or may authorise the use or control of the station or apparatus by any department of the Government upon just compensation to the owners.

12. The Secretary of Commerce and Collectors of Customs or other officers of the Government authorised by him may at all reasonable times enter upon the station for the purpose of inspecting and may inspect any apparatus for radio communication of such station and the operation and operators of such apparatus.

13. The apparatus shall not be altered or modified in respect of any of the particulars mentioned in the following schedule, except with the approval of the Secretary of Commerce.

RADIO SERVICE.

L Pursuant to the Act to regulate radio communication, approved August 13th, 1912

a citizen of the State of

For long-range public service and for any service other than general public correspondence the station is authorised to use the following additional wavelengths under 600 or over 1,600 metres:

Metres, ; Metres, ; Metres,
Metres, ; Metres,

The energy, if radiated by the transmitter in two or more wavelengths as indicated by a sensitive wavemeter, shall not in any one of the lesser waves exceed 10 per cent. of that in the greatest; and the logarithmic decrement per complete oscillation in the wave trains shall not exceed two-tenths, except when sending signals or messages relating to vessels in distress.

....

a company incorporated under the laws of the State of , having applied therefor, is hereby granted by the Secretary of Commerce for a period of

on and subject to the restrictions and conditions hereinafter stated and revocable for cause by him, this license to use or operate the apparatus for radio communication (identified in the schedule hereinafter) on the .... called
(Type of vessel.)

......................, a vessel of the
(Name of vessel.)

United States, official number , for the purpose of transmitting to and receiving from other ship stations and land stations general public correspondence, Government and service correspondence, and distress signals and messages, at rates of compensation not in excess of those fixed by the International Agreement to which the Government of the United States has adhered, which have been submitted to and approved by the Secretary of Commerce, as included in the schedule hereinafter.

2. The use or operation of apparatus for radio communication pursuant to this license shall be subject also to the articles and regulations established by the International Radiotelegraphic Convention, ratified by the Senate of the United States and caused to be made public by the President "to the end that the same and every article and clause thereof may be observed and fulfilled with good faith by the United States and citizens thereof," and shall be subject also to such regulations as may be established from time to time by authority of subsequent acts and treaties of the United States.

3. The authority conferred by this license is subject to the provisions of the act of February 4th, 1887, entitled "An Act to Regulate Commerce," as amended by the Act of June 18th, 1910, so far as the licensee may be within the operation of said Act, and except as provided in the Act of August 13th, 1912, or in the International Radiotelegraphic Convention and regulations made part thereof, the station shall transmit all messages offered by those who tender lawful rates on equal terms without discrimination, whether as regards rates, order of transmission, or otherwise.

4. The licensee shall render to the Secretary of Commerce such accounts as the Secretary of Commerce shall direct in respect of all charges due or payable under the International Radiotelegraphic Convention in respect of messages exchanged between the station hereby licensed and other stations, and shall pay to the Secretary of Commerce, at such times and in such manner as the Secretary of Commerce shall direct, all sums which shall be due from the licensee under such accounts.

5. The apparatus shall at all times while in use and operation be in charge or under the supervision of a person or persons licensed for that purpose by the Secretary of Commerce, except when in case of emergency the Collector of Customs by authority of the Secretary of Commerce shall issue a temporary permit, in lieu of a license, to the operator. The operator of the apparatus shall not wilfully or maliciously interfere with any other radio communication.

6. The station shall give absolute priority to signals and radiograms relating to ships in distress; shall cease all sending on hearing a distress signal; and, except when engaged in answering or aiding the ship in distress shall refrain from sending until all signals and radiograms relating thereto are completed.

7. The station shall be prepared to send the international signal of distress and distress signals on the normal wavelength designated by the International Radiotelegraphic Convention in force with sufficient power to

enable them to be received by day over sea a distance of 100 nautical miles by a ship station equipped with apparatus for sending and receiving equal in all essential particulars to the apparatus of the station herein licensed.

8. The station shall use the minimum amount of energy necessary to carry out any communication desired, except in case of signals or radiograms relating to vessels in distress.

9. The station shall exchange radiograms with any other ship station without distinction of the radio systems adopted by such stations.

10. The station shall not use, except for sending signals of distress or signals and radiograms relating thereto, or when, owing to unusual circumstances, communication can be established only by means of an increase of power, a transformer input exceeding 1 kw., or exceeding ½ kw. when within five nautical miles of a naval or military station.

11. The President of the United States in time of war or public peril or disaster is authorised by law to close the station and cause the removal therefrom of all radio apparatus, or may authorise the use or control of the station or apparatus by any department of the Government upon just compensation to the owners.

12. The Secretary of Commerce and Collectors of Customs or other officers of the Government authorised by him may at all reasonable times enter upon the station for the purpose of inspecting, and may inspect any apparatus for radio communication of such station and the operation and operators of such apparatus.

13. The apparatus shall not be altered or modified in respect of any of the particulars mentioned in the following schedule, except with the approval of the Secretary of Commerce.

LICENSE FOR LAND RADIO STATION.

Class

DEPARTMENT OF COMMERCE.
BUREAU OF NAVIGATION.
RADIO SERVICE.

M Pursuant to the Act to regulate radio communication, approved August 13th, 1912,

a citizen of the State of a company incorporated under the laws of the State of , having applied therefor, is hereby granted by the Secretary of Commerce for a period of on and subject to the restrictions and conditions hereinafter stated and revocable for cause by him, this license to use or operate the apparatus for radio communication (identified in the schedule hereinafter) for the purpose of transmitting to and receiving from ship stations and other land stations public correspondence, Government and service correspondence, and distress signals and messages at rates of compensation not in excess of those fixed by the international agreement to which the Government of the United States has adhered, which have been submitted to and approved by the Secretary of Commerce, as included in the schedule hereinafter, or for the purpose of conducting experiments for the development of the science of radio communication or the apparatus pertaining thereto, to carry on special tests, using any amount of power or any wavelengths, at such hours and under such conditions as will insure the least interference with the sending or receipt of commercial or Government radiograms, of distress signals and radiograms, or with the work of other stations, the purpose of the station being designated by the classification at the head of this license.

2. Public correspondence or limited commercial correspondence authorised by this license shall be limited to certain stations, ships or lines of ships named hereinafter, which designation is authorised in view of the nature of the service and is independent of the radio system employed.

3. The use or operation of apparatus for radio communication pursuant to this license shall be subject also to the articles and regulations established by the International Radiotelegraphic Convention, ratified by the Senate of the United States and caused to be made public by the President, and shall be subject also to such regulations as may be established from time to time by authority of subsequent Acts and treaties of the United States, in so far as they apply to the class of station indicated by this license.

4. The authority conferred by this license is subject to the provisions of the Act of February 4th, 1887, entitled "An Act to Regulate Commerce," as amended by the Act of June 18th, 1910, so far as the licensee may be within the operation of said Act, and except as provided in the Act of August 13th, 1912, or in the International Radiotelegraphic Convention and regulations made part thereof, the station shall transmit all messages offered by those who tender lawful rates on equal terms without discrimination, whether as regards rates, order of transmission, or otherwise.

5. The licensee shall render to the Secretary of Commerce such accounts as the Secretary of Commerce shall direct in respect of all charges due or payable under the International Radiotelegraphic Convention in respect of messages exchanged between the station hereby licensed and other stations, and shall pay to the Secretary of Commerce, at such times and in such manner as the Secretary of Commerce shall direct, all sums which shall be due from the licensee under such accounts.

6. The apparatus shall at all times while in use and operation be in charge or under the supervision of a person or persons licensed for that purpose by the Secretary of Commerce, and the operator of the apparatus shall not wilfully or maliciously interfere with any other radio communication.

7. The station shall give absolute priority to signals and radiograms relating to ships in distress; shall cease all sending on hearing a distress signal; and, except when engaged in answering or aiding the ship in distress, shall refrain from sending until all signals and radiograms relating thereto are completed.

8. The station shall use the minimum amount of energy necessary to carry out any communication desired, except in case of signals or radiograms relating to vessels in distress.

9. The station shall not use a transmitter during the first fifteen minutes of each hour, local standard time, except for distress signals, whenever the Secretary of Commerce by notice in writing shall require it to observe a division of time, pursuant to the Regulation 12 of the Act of August 13th, 1912.

10. The President of the United States in time of war or public peril or disaster is authorised by law to close the station and cause the removal therefrom of all radio apparatus, or may authorise the use or control of the station or apparatus by any department of the Government upon just compensation to the owners.

11. The Secretary of Commerce and Collectors of Customs or other officers of the Government authorised by him may at all reasonable times enter upon the station for the purpose of inspecting and may inspect any apparatus for radio communication of such station and the operation and operators of such apparatus.

12. The apparatus shall not be altered or modified in respect of any of the particulars mentioned in the following schedule, except with the approval of the Secretary of Commerce.

NOTICE TO BERNE BUREAU.

The Minister of Marine of the United States of America has notified to the Berne Bureau that the following information is to be published:—

1. The Departments of the United States Government which are concerned with wireless telegraphy regret that they have not yet been able to make arrangements with the land telegraph of the United States owing to the fact that these are in the hands of commercial companies, and have nothing to do with the Government. The idea was to arrange for the free transmission over the land telegraph, in accordance with Article 14, paragraph 2, of the Rules of Service of the London Convention The information to be transmitted free of charge was all such as related to the date and the hour of the handing in of radiotelegrams on board ship. But the transmission of such information over land lines being subject to a tax, the Government of the United States cannot, at present, conform strictly to this rule of the Convention. The declaration of the American delegation contained in Article 2 of the Final Protocol made provision for such a possible outcome, although its exact nature was not actually set forth.

2. Multiple radiotelegrams, such as are mentioned in article 38, paragraph 5, of the Rules of Service, will be accepted as multiple messages in all wireless transmission between ship and shore stations, but all the companies operating land telegraph lines in the United States will consider, and will charge for, a multiple wireless message as consisting of so many individual telegrams as the addresses it bears may indicate.

3. The United States is not a member of the International Telegraphic Union and consequently is not bound to execute the rules laid down in Article 38, paragraph 8, of the London Convention Rules of Service concerning urgent radiotelegrams. The laws of the United States regulating all reciprocal arrangements between the States forbid the use of the privilege, and consequently all telegraph companies will not allow any priority in favour of telegrams for which any additional tax may have been paid.

An Act to authorise the President of the United States to arrange and participate in an international conference to consider questions relating to international communication.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States be, and he is hereby, requested and authorised in the name of the Government of the United States to call, in his discretion, an international conference to assemble in Washington, and to appoint, by and with the advice and consent of the Senate, representatives to participate therein, to consider all international aspects of communication by telegraph, telephone, cable, wireless telephone, and wireless telegraphy, and to make recommendations with a view to providing the entire world with adequate facilities for international communication on a fair and equitable basis.

SEC. 2.—That the sum of $75,000, or so much thereof as may be necessary, is hereby appropriated out of any money in the Treasury not otherwise appropriated, the same to be disbursed under the direction and in the discretion of the Secretary of State for expenses incidental to the conference, including personal services in the District of Columbia notwithstanding the provisions of any other Act: Provided, That no part of said sum shall be used in entertainment or for the purchase of medals and badges.

Approved, December 17th, 1919.

U.S. RADIO COMPASS STATIONS.

Masters of vessels are invited to make use of the U.S. naval radio compass (direction finding) stations to fix positions. They will be found especially useful during thick weather.

The following U.S. naval shore radio compass stations are now in operation for the purpose of furnishing bearings in the Western Atlantic and the Gulf of Mexico. For the present there will be no charge for bearings furnished.

RADIO COMPASS STATIONS ON ATLANTIC AND PACIFIC COASTS ALPHABETICALLY BY NAMES OF STATIONS.

ATLANTIC COAST.

Name of Stations.	Call Signal.	Name of Stations.	Call Signal.
Amagansett, N.Y.	NBM	Gloucester, Mass.	NAD
Bar Harbour, Me. (Otter Cliffs, Me.)	NBD	Grand Island, La.	NLI
Bethany Beach, Del.	NSD	Hog Island, Va.	NCZ
Burrwood, La.	NBX	Jupiter, Fla.	NAQ
Cape Elizabeth, Me. (Portland)	NAB	Key West, Fla.	NAR
Cape Hatteras, N.C.	NDW	Mantoloking, N.J.	NAH

Fourth Cliff, Mass.	NAD	Virginia Beach, Va.	NCZ

U.S. PACIFIC COAST.

The following stations on the Pacific Coast are completed and in commission to give continuous service to shipping :—

PACIFIC COAST.

Name of Stations.	Call Signal.	Name of Stations.	Call Signal.
Bird Island, Calif.	NLD	Point Arguello, Calif.	NPK
Cattle Point, Wash.	NFN	Point Fermin, Calif.	NPX
Empire Oreg.	NPF	Point Hueneme, Calif.	NMD
Eureka, Calif.	NPW	Point Loma, Calif.	NPL
Farallons Island, Calif.	NPI	Point Montara, Calif.	NLH
Fort Stevens, Oreg.	NPE	Point Reyes, Calif.	NLG
Imperial Beach, Calif.	NPL	Port Angeles, Calif.	NFT
New Dungeness, Wash.	NFT	Smith Island, Wash.	NFH
Ocean Park, Wash.	NPE	Tatoosh, Wash.	NPD

Masters of ships are informed that in making use of the San Francisco Harbour entrance group they are requested to call the Farallon Island Station, who will obtain bearings from the remaining stations in the group and furnish them to the ship, after corrections have been applied.

When a request for bearings is made the central control station invariably answers with a bearing from each of the compass stations under its control.

The following signals have been authorised and will be used until further notice :—

SIGNAL.	MEANING.
QTE ?	What is my true bearing ?
QTE	Your true bearing is....degrees from...........Radio Compass Station.
QTF ?	What is my position ?
QTF	Your position is latitude........ longitude........

To obtain bearings the compass station should be called in the usual manner, using the 800-meter wavelength, the call to be followed by the signal "QTE ?," meaning "What is my true bearing ?" When told by the compass station to "K" (go ahead) the ship's radio operator should follow the procedure outlined below :—

(*a*) Transmit the ship's radio call for 30 seconds.

(*b*) Make dashes, each dash five seconds long, for one minute, with the ship's radio call after each dash.

(*c*) Terminate with the signal "K" (go ahead).

If satisfactory bearings are obtained the operator at the compass station will call the vessel in the usual manner and reply "QTE," followed by the true bearing in degrees (0 to 359) spelled out in words, and the name of the radio compass station from which the bearing was obtained; otherwise a repetition of the test will be requested.

The ship's operator should acknowledge receipt of the bearings by answering the compass station in the usual manner and repeat, in numerals, the bearings received. This procedure enables all stations concerned to check the bearings.

All U.S. naval shore radio compass stations keep watch and transmit on 800 metres for merchant vessels, and this wavelength must be used for calling and answering and carrying on all communications with these stations.

Attention is invited to the fact that when a single bearing is furnished there is a possibility of an error of 180 degrees, as the operator at the compass station cannot always determine on which side of his station the vessel lies; in such cases the decision is left to the commander of the vessel.

Subject to the foregoing, bearings should be accurate within 2 degrees of an arc. When bearings from three or more compass stations are not over 2 degrees of arc in error, but do not meet at a fixed point, the geometrical centre of the triangle formed by the bearings can generally be taken as the approximate position of the vessel.

The primary object of these stations is to assist in the navigation of vessels during atmosphere of low visibility.

In order that the operation of shore radio compass stations may be checked up, it is requested that a brief report be forwarded to the Director, Naval Communications, Navy Department, Washington, D.C., containing the following particulars :—

1. Name of ship;
2. Name of radio compass station;
3. Date of G.M.T. at which radio bearing was taken;
4. Bearing given by radio compass station;
5. Estimated position of ship at above time and dates by methods other than radio;
6. The probable degree of accuracy of the estimated position;
7. Weather conditions at above time;
8. Remarks, if any;
9. Signature of master or responsible navigating officer.

ACCURACY OF RADIO BEARINGS.

The following information was furnished by the Director of the U.S. Naval Communication Service under date of October 10th, 1919 :—

"The reliance that can be placed in bearings furnished by shore radio compass stations will be governed by the following conditions :—

"(*a*) When two sets of bearings are received which do not agree, a third set should immediately be requested.

"(*b*) In thick weather, bearings should be requested at least every half-hour.

"(*c*) Bearings that pass over intervening land or that are tangent to the shore line are not as reliable as those that have a clear sweep over the sea.

"(*d*) Navigators receiving a set of bearings should immediately investigate the approximate fix indicated and determine whether or not they are being furnished with bearings from the stations that should be most reliable.

"(*e*) When the position of the ship as indicated by the radio bearing differs materially from the position of dead reckoning, a second set of radio bearings should be requested in order to check the first radio position."

NOTE.—While the Navy Department states that at the present time radio compass bearings have reached a high degree of accuracy, it must be understood that the Government incurs no liability for any consequences resulting from any inaccuracy in the taking or transmission of radio compass bearings. These bearings are provided free of charge, as aids to navigation, to be used at the discretion of the master of the vessel.

PUBLIC RESOLUTION :

No. 48—66TH CONGRESS.

V Joint Resolution to authorise the operation of Government-owned Radio Stations for the use of the general public, and for other purposes.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled : That all land, ship and airship radio stations, and all apparatus therein owned by the United States may be used by it for receiving and transmitting messages relating to Government business, compass reports and the safety of ships.

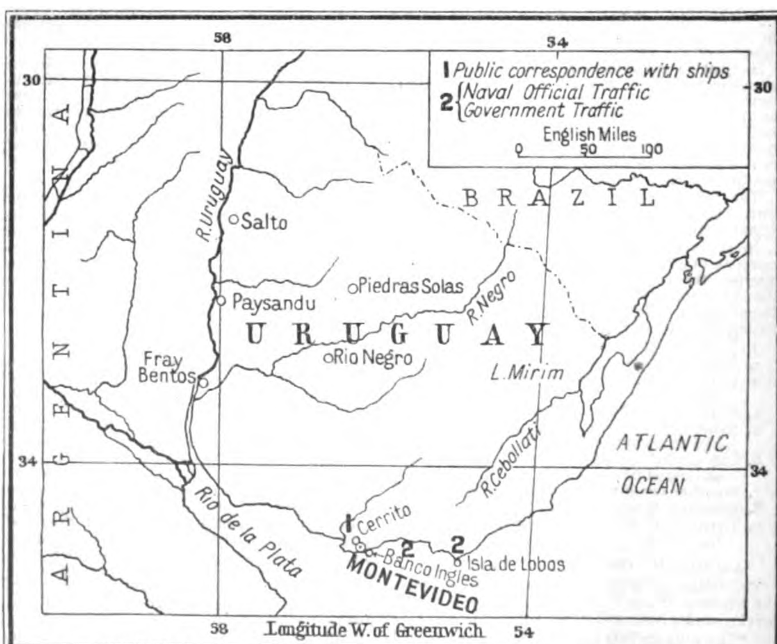
SEC. 2. That the Secretary of the Navy is hereby authorised, under terms and conditions and at rates prescribed by him, which rates shall be just and reasonable, and which, upon complaint, shall be subject to review and revision by the interstate Commerce Commission, to use all radio stations and apparatus, wherever located, owned by the United States and under the control of the Navy Department—(*a*) for the reception and transmission of press messages offered by any newspaper published in the United States, its territories or possessions, or published by citizens of the United States in foreign countries, or by any press association of the United States, and (*b*) for the reception and transmission of private commercial messages. Provided : That the rates fixed for the reception and transmission of commercial messages, other than press messages, shall not be less than the rates charged by privately-owned and operated stations for like messages and service : Provided further, That the right to use such stations for any of the purposes named in this section shall terminate and cease as between any countries or localities or between any locality and privately operated ships, whenever privately owned and operated stations are capable of meeting the normal communication requirements between such countries or localities or between any locality and privately operated ships, and the

Secretary of Commerce shall have notified the Secretary of the Navy thereof, and all rights conferred by this section shall terminate and cease in any event two years from the date this resolution takes effect.

SEC. 3. That all stations owned and operated by the Government, except as herein otherwise provided, shall be used and operated in accordance with the provisions of the Act of Congress entitled "An Act to regulate radio communication," approved August 13th, 1912.

Approved, June 5th, 1920.

URUGUAY



THE independence of the Republic of Uruguay, originally part of the Spanish Viceroyalty of Rio de la Plata, and later on a Province of Brazil, was declared on August 25th, 1825, and recognised by Treaty on August 27th, 1828. The constitution was sworn on July 18th, 1830, and reformed in January, 1918. Legislation is administered by a Parliament of two Houses, the Executive being in the hands of a President elected every four years, and a National Adminstrative Council composed of nine members. The total area of the nineteen departments into which the country is divided is estimated at 72,153 square miles. The capital city is Montevideo, situated on the northern bank of the River Plate Estuary.

CONTROL.

Wireless telegraphy in Uruguay is controlled by the Government, the department in charge being the Ministry of War and Marine. The Government ship stations are also under the control of the Minister of War and Marine. There are no privately owned stations. There are no radiotelegraphic clubs or societies, in fact wireless telegraphy is entirely a Government monopoly.

ORGANISATION.

The installation of wireless telegraphy in Uruguay was authorised by a Government Decree dated June 22nd, 1910. This Decree provided for one

long-distance station at Montevideo, minimum range 500 miles; two situated respectively at Paso de los Toros and Rivera (Northern Frontier), with minimum range of 372 miles; two respectively situated at Lobos Island and the English Bank, each with minimum range of five miles; besides installations on the various Government vessels. By the end of the year 1911 the service (supplemented by two Military Field Stations) was in working order.

The Montevideo station, opened to the public in December, 1911, and standing on a hill three miles from the river, is the only installation doing international work. Its location is called Cerrito de la Victoria, and the wireless station generally goes by the name of "Cerrito." The installations situated at Rivera and Paso de los Toros are employed solely for military purposes, and only in times of crisis, should a breakdown of the ordinary wired service eventuate, are they used for public messages.

Officials Controlling Wireless Telegraphy.

Official.	*Title.*	*Address.*
Dr. Arturo Gaye ..	Acting *pro tem.* as Minister for War	Montevideo
Sr. Bernardo Kay..	Engineer Inspector-General.. ..	Calle Pereira 74, Montevideo
Sr. Juan P. Camera	Secretary	Calle Ituzaingo 1278, Montevideo
Lieut.-Col. Carlos Du Pre	Chief of Montevideo Station (Cerrito)	Montevideo
Sr. Cesar y Vidal Pineiro	Chief of Paso de los Toros Station	Paso de los Toros
Sr. Gualberto Oriel	Chief of Rivera Station	Rivera

ADMINISTRATION.

The first Decree regulating the subject was issued by the Ministry of War and Marine on September 5th, 1911, and was followed by a decree dated January, 1912. Under its provisions *all ships calling at the ports of the Republic and destined for passenger service are obliged to be fitted with wireless apparatus.*

We print here the text of both the Decrees above referred to:—

A—Decree of September 5th, 1911.
B—Decree of January, 1912.

Decree of September 5th, 1911.

A 1. The National Wireless Telegraphy Office is under the direct control of the Ministry of War and Marine, with the Engineer Inspector-General as its head.

2. The National Wireless Telegraph Office is in charge of and controls all the radio-telegraphic stations, whether fixed or military movable ones, on vessels or on lighthouses, together with their staff, apparatus and installations.

3. The Inspector-General will at such times and under such circumstances as he thinks proper make visits of inspection of the stations in order to take personal cognisance of their requirements, and he exercises in regard to the staff, whether military or civil, the character of a staff commander.

4. On the occasions of manœuvres the Inspector-General will designate the country stations which are to take part in accordance with the instructions he receives as to the requirements of the occasion.

5. It is one of the duties of the National Wireless Telegraph Office to propose to the superior department the construction of fresh stations and to report regarding the means for acquiring the same.

6. The Inspector-General controls the sums received for transmission of telegrams, which sums shall be deposited in the Bank of the Republic to the order of the Minister of War and Marine.

7. The National Wireless Telegraph Office will make contracts with the General Post and Telegraph Office and with the shipping companies to be submitted for approval to the Minister of War and Marine; similarly the office is empowered to draw up with the administrations of the neighbouring States radiotelegraphic agreements with the object of improving and amplifying the international wireless telepraph service, all of which shall be submitted for approval by the higher department.

8. The Minister of War and Marine will notify the International Office in Berne of the creation of the National Wireless Telegraph Office in Uruguay, so that in future all questions concerning wireless telegraphy in Uruguay may be referred direct to it.

9. The Inspector-General will report quarterly to the Minister of War and Marine regarding the general conditions and working of the service under his charge, and will compile an annual memorandum upon the general work of his department.

DECREE OF JANUARY, 1912.

B

1. Commencing from May 1st of the present year (1912) all the ships carrying passengers between the harbours of the Republic and those of foreign countries shall be fitted with radiotelegraph installations.

2. The said installations shall be designed to receive and transmit telegrams up to a distance of not less than one hundred kilometres on the ships of river navigation, and four hundred kilometres on those of the oceanic navigation.

3. The installations shall be permanently kept in good conditions of working, and capable of intercommunicating with the stations of the Republic.

4. The stations shall be in charge of persons well acquainted with the use of radiotelegraph apparatus.

5. The service of the stations shall be entirely in accordance with the provisions of the International Radiotelegraph Convention.

6. The agents of the companies will inform, before expiration of the time fixed, the General Inspector of the National Service of Wireless Telegraphy of the characteristics, system, power, etc., of the radiotelegraph apparatus to be fitted on the ships of their companies.

7. The ships which after expiration of the time fixed by Article 1 have not complied with the provisions of this Decree shall not be authorised to carry passengers in the harbours of the Republic.

8. Those ships which do not keep their wireless apparatus in proper working conditions shall be liable to have applied to them the penalty specified in the previous article (7).

9. The General Inspector of the National Service of Wireless Telegraphy is hereby entrusted with seeing that the provisions of this Decree are duly complied with.

VENEZUELA

THE Republic of Venezuela was formed in 1830 by secession from the other members of the Republic of Colombia. The Constitution in force is that of June 13th, 1914. Legislative authority is vested in a Congress of two Chambers, whilst the Executive Power is exercised by a President in conjunction with Cabinet Ministers. The twenty states, two territories and one Federal district of which it is composed cover an area of 398,594 square miles.

The territory included under the Administration of Venezuela is the same as that which was known, at the time South America was a Spanish colony, as "Capitania General de Venezuela," and extends from British Guiana on the east to the Republic of Colombia on the west. Its northern boundary is the Caribbean Sea, and its southern boundary the Republic of Brazil. There are included in the Venezuelan territory many islands in the Caribbean Sea, the principal being Margarita, Cubagua, Los Roques, Coche, Tortuga.

The superficial area of the country is 1,432,000 square kilometres.

The form of government is Federal Republican, democratic and representative. The Legislative power is exercised by two Chambers, the Senate and the Deputies, the former being representative of the different states, and the latter being representative of the people. The Federal States have administrative and financial autonomy. The Central Government devotes itself to the general interests of the country.

CONTROL AND ORGANISATION.

Wireless telegraphy has not yet been established as a public service. Trials have been made by individuals, but no permanent installation for public use exists. A small installation for students has been established at Puerto Cabello for the use of a Government School of Wireless Telegraphy, established in June, 1917.

Dr. Luis Soriano, former Director of the Physical Laboratory at the Central University, was the first to make experiments with wireless telegraphy in Venezuela.

Wireless telegraphy is under jurisdiction of the Central Government.

Private concerns are not allowed to erect or work wireless. The Government could at any time grant licenses for the establishment of a wireless service by private companies or individuals.

As regards communication within the country, the right to establish public wireless communication is comprised in the State monopoly for any kind of telegraph communication, as indicated in the extract from the Laws relating to Telegraphs and Telephones printed here.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	*Title.*	*Address.*
Dr. Gumersindo Torres	Minister of Fomento	Caracas
Dr. C. Gimenez Rebolledo	Minister of War	Caracas
General Tobias Uribe	Director-General of Telegraphs and Telephones	Caracas
Dr. S. Key Ayala	Director of Posts and Telegraphs at the Ministry of Fomento	Caracas

There are no companies manufacturing wireless apparatus or engaged in wireless business of any kind in Venezuela.

There are no wireless societies, clubs, or publications in the country.

The National Government is considering the establishment of radiotelegraphy from two points of view, namely, as regards the working of a high-power station which will guarantee direct communication with Europe and the United States, and also as regards the interior service of the country.

Allied with the second point of view is the establishment of a small training station which shall serve for the training of operators. This station is of two kilowatts, Marconi system, situated at the high part of Caracas in front of the Bay of Catia which gives easy access to the waves transmitted towards the sea and has been able to maintain communication with Curaçao and Trinidad. Three stations are desired, two of five and one of three and a half kilowatts, two of which stations will be established at the towns of Maracay and San Cristobal respectively. A portable military station has also been asked for for the use and instruction of officers of the Army.

By decree dated July 23rd of the present year was created the National School of Radiotelegraphy, an institution destined to provide the country with native operators for the service. The school is directed by Mr. H. R. von Eichwald, a Venezuelan by naturalisation.

For this same purpose three young Venezuelans were sent to the United States to study radiotelegraphy. These young men were granted an allowance by the Government, and have undertaken to return and lend their services to the country.

ADMINISTRATION.

The laws and regulations relating to wireless telegraphy and telephony are contained under the following :—

A—Radiotelegraphic Regulations.

B—Instructions for Radio Telegraphic Stations.

DOCTOR V. MARQUEZ BUSTILLOS,

Provisional President of the Republic,

in virtue of Clause 10 of Article 79 of the National Constitution

DECREES THE FOLLOWING

A RADIOTELEGRAPHIC REGULATION. HEADING No. I.—PRELIMINARY CONDITIONS.

ART. 1.—Wireless telegraphy or radiotelegraphy in Venezuela will be governed by the Law of Telegraphs and Telephones, by the International Radiotelegraphic Convention, by the other special conventions made in respect thereto, by the conditions of the present Decree, and by others that may be prescribed.

ART. 2.—Pre-eminent control and administration of radiotelegraph installations will be in the hands of the Ministry of Public Works; but if the Federal Executive should desire it, they can in war time be placed under the direction of the War Office and Admiralty.

ART. 3.—The National territory is divided into two zones, subject to regulation and jurisdiction. The maritime zone comprises the territorial waters of the Republic, including the navigable rivers. The terrestrial zone embraces all the other installations erected within the Venezuelan territory, including islands, shores and banks.

ART. 4.—With the exception of National or foreign warships, no ship which is anchored may use its radiotelegraph installations, while it is not sailing, unless justified by reason of urgency.

ART. 5.—According to their purpose, radiotelegraph stations are divided as follows:—1st, central station; 2nd, local stations; 3rd, training stations; 4th, portable stations.

ART. 6.—Only the National Government may possess radiotelegraph stations in the terrestrial zone of Venezuela. Private people may be able to use them, subject to the ruling conditions and tariffs.

ART. 7.—All National or foreign merchant vessels carrying more than fifty passengers on an ordinary voyage, whether they put in or anchor at Venezuelan ports, must be in possession of a wireless telegraph installation in perfect condition, and another emergency installation besides, which can work for at least six hours, and be set quickly to work in case of the former apparatus getting out of order in times of danger.

ART. 8.—Boats excepted by the International Conventions and those exclusively devoted to coast navigation through National territorial waters are exempted from carrying wireless installations.

Boats which are exempted from the said obligation may not possess radio installations without previous permission from the Federal Executive.

GENERAL CONDITIONS.

FIRST SECTION.

Signals and Radiotelegraphic Waves.

ART. 9.—The exchange of signals, superfluous words, experimenting or practising that may in any way interrupt radiotelegraphic correspondence is forbidden at ordinary stations.

ART. 10.—The normal length of a wave will be 600 metres. Training and portable stations shall use a smaller one, to be fixed for them, so as not to interfere with ordinary communications.

ART. 11.—Permission is given in exceptional circumstances for other wavelengths to be used in accordance with the limits of the International Regulations.

ART. 12.—The signs used for radiotelegraphic communications will be those of the International Morse alphabet.

ART. 13.—Ships in distress will use the sign adopted by the International Conventions.

ART. 14.—As soon as a station hears danger calls, it shall suspend all correspondence and not resume it until after having made certain that the communication of danger has been concluded; it shall attend to the calls wherever there origin may be, and answer them; it shall in conformity with the notifications from the ship communicate with the authorities of the respective littoral.

ART. 15.—In radio communications between coast and ship stations the call, pauses and inquiries noted in the Regulation annexed to Radiotelegraphic Convention, signed in London on the 5th July, 1912, shall be observed; this will not prevent the use of others for interior service, but in this case the use of those universally adopted signals that might cause confusion is strictly forbidden.

SECOND SECTION.

(1) *Personnel of the Radiotelegraph Service.*

ART. 16.—The Director-General of Telegraphs and Federal Telephones will be the head of the radiotelegraph stations in everything concerning the service. Anything relating to the inspection and working of the installations, complaints, fulfilment of regulations and application of penalties is included in his duties which he shall exercise direct, giving an account of each case to the Ministry of Public Works.

ART. 17.—For the supervision of installations, the Ministry of Public Works may appoint inspectors of radiotelegraphy, with jurisdiction over a particular littoral.

ART. 18.—The radiotelegraphic service of each installation shall be performed by an operator who holds a first-class efficiency certificate. The latter includes:—

(*a*) A knowledge of the apparatii and of their arrangement and working;

(*b*) A capacity for transmitting and receiving audibly at a minimum speed of twenty words a minute;

(*c*) A knowledge of the International Regulations, local laws and regulations compulsorily applicable to the service and exchange of radiotelegraph communications.

ART. 19.—In exceptional cases, when the service has to be entrusted to an operator who has only a second-class certificate, the latter must guarantee the same efficiency as a first class, except in regard to speed transmission and reception capacity, which must never be less than twelve words a minute.

ART. 20.—The duties of bookkeeping and filing at radiotelegraph stations are under the charge of the operator and the Exchequer of Federal Telegraphs and Telephones.

ART. 21.—Radiotelegraph stations, according to their importance and local regulations, shall be worked by a requisite subordinate staff in accordance with the dispositions of the Ministry of Public Works, for dealing effectively with the service.

ART. 22.—Radiotelegraph stations shall be connected with the National Telegraph system.

Radiograms may be handed in at ordinary telegraph offices for transmission by wire to the stations. In these cases the receiving clerk must make separate bookkeeping entries.

(*b*) *School of Radiotelegraphy.*

ART. 23.—The School of Radiotelegraphy is an institution for educating the technical staff

of the Republican radiotelegraph and radiotelephone stations.

ART. 24.—The Director-General of Telegraphs and Federal Telephones, the Head Professor and a language Professor will constitute the personnel of the school.

ART. 25.—The Director-General of Federal Telegraphs and Telephones shall exercise control over the school and see that it is well conducted, notifying the Ministry of Public Works every time amendments are necessary or suitable improvements might be adopted.

ART. 26.—The Head Professor, who is immediately subordinate to the Federal Director-General of Telegraphs and Telephones, shall deal with the organisation and working of the institution, and shall besides give instruction on the subjects necessary for the course of training, and in accordance with the programme of studies which he shall elaborate and submit for approval to the Ministry of Public Works.

ART. 27.—The Language Professor shall give pupils the special instruction desired and do his best besides to assist in the good management of the school.

ART. 28.—To be admitted as a pupil in the school the following is necessary :—

(*a*) To be over eighteen and under thirty-five years of age;
(*b*) A holder of a high grade certificate of instruction;
(*c*) To be known to be of good conduct;
(*d*) A holder of a certificate from the National Health Office certifying good health;
(*e*) Written permission from a legal representative in the case of minors.
(*f*) To request registration in a legal form within the prescribed time before the opening of a term. The request shall be addressed to the Minister of Public Works and shall be accompanied by the confirmation that the other requisites herein mentioned are complete.

ART. 29.—The number of pupils that will form a radiotelegraphic course shall in every case be fixed by the Ministry of Public Works.

ART. 30.—Nobody can be appointed to take an operator's position in the Republican Radiotelegraph of Radiotelephone Service who has not obtained a diploma for efficiency.

ART. 31.—In order to obtain the diploma referred to in the previous Article it is necessary to have gone through a course at the School of Radiotelegraphy in the subjects contained in the schedule of studies and to have passed the requisite examination satisfactorily, which shall consist of three divisions :—

(i) A half an hour's oral test on subjects taken by ballot from the programme which shall be done by numbering slips from one upwards to the number of subjects contained in the programme.

(ii) To draw up in fifteen minutes a document of the service proposed by the Examining Board.

(iii) Transmitting and receiving practice for fifteen minutes. In no case will a candidate be approved who has not executed a speed minimum of twelve words a minute.

ART. 32.—The optional examinations for the diploma are always individual ones, and can be arranged at any time on the date fixed by the Ministry of Public Works, in accordance with the request which the candidate must make in legal form, which must bear at the foot thereof the certificate issued by the Director of the School, stating that the candidate has attended the course regularly, been punctual for the classes and done the tasks required in accordance with the schedule of studies.

ART. 33.—If the candidate should be approved, besides the diploma a certificate will be sent him, a first-class one if the transmitting and receiving speed is a minimum of twenty words a minute, and a second-class one if the speed varies between twelve and nineteen words a minute.

ART. 34.—The examining boards for the diploma shall consist of five members: the Director-General of Federal Telegraphs and Telephones, the Head Professor of the School of Radiotelegraphy and three technical specialists, preferably chosen from first-class operators.

THIRD SECTION.

RADIOTELEGRAPHIC SERVICE, OFFICIAL AND PRIVATE.

I.—*Order and Preference.*

ART. 35.—The radiotelegraph service is intended chiefly for commerce and private people. Only when it is a question of messages sent by the President of the Republic or by the Commander-in-Chief of the National Army, in case of interruption of the ordinary lines or on matters of distinct urgency may the wireless telegraph of the terrestrial zone be used for official communications.

ART. 36.—Radiograms shall be despatched in the following order :—

(*a*) Official service, and this will be according to the rank of the sending official.
(*b*) Private radiograms in the order in which they are handed in.

ART. 37.—Radiograms referred to in Article 13 shall have absolute priority.

II.—*Free Traffic.*

ART. 38.—Radiograms will be free that are sent on service matters by officials authorised by the Law on Telegraphs and Telephones of the 20th June, 1918.

ART. 39.—Free traffic is not exempt from the supplementary taxes of ships and other foreign stations that have to handle the communications.

ART. 40.—The right to send a reply free of charge is proved by the presentation of the official radiotelegram or telegram requiring it.

III.—*Tariff.*

ART. 41.—The radiotelegraphic charge will be :—

I.—*For Interior Service.*

(*a*) *Radiotelegraphic charge, properly so-called* at the rate of B. 0.25 a word with a minimum of ten words for every radiogram.
(*b*) *Telegraphic or postal charge*, or both, according to the means of communication to be employed, whenever there is no radiotelegraphic station at the place of origin or destination. and whenever the sender may request these special services.

II.—*For Exterior Service.*

(*a*) *Radiotelegraphic charge properly so-called* at the rate of B. 0.60 per word, with a minimum of ten words for every radiogram.
(*b*) *Coast or ship tax* of the station or ship to which the radiogram is sent according to the special tariff for same.
(*c*) *Telegraphic or postal charge*, or both, according to the means of communication that may have to be employed, whenever there is no radiotelegraphic station at the place of origin or destination, and whenever the sender may request these special services.

Sole paragraph. ***In the radiotelegraphic charge properly so-called*** the address and signature will be collected both for interior and exterior service.

IV.—*Secrecy.*

ART. 42.—All legal dispositions relating to keeping correspondence secret shall be applied to radiotelegrams.

ART. 43.—Only the President of the Republic, the Commander-in-Chief of the National Army, the Ministers of the Interior, the Governor of the Federal District and National Diplomatic Ministers or foreign residential ones may send or receive messages in code without any restriction.

ART. 44.—Subordinate employees will also be allowed to send cypher radiograms when dealing with a reply so required by their superiors mentioned in the foregoing Article.

ART. 45.—In International communications private people may for the purposes of economy use ordinary well-known telegraphic codes; but in every case the translation of the message must be attached so that it can be filed with the original radiogram.

HEADING No. III.
SPECIAL CONDITIONS.

FIRST SECTION.—PENALTIES.

ART. 46.—Breaches of the present Regulations will be punished by fines from 100 to 20,000 bolivares, which will be applied by the Director of Federal Telegraphs and Telephones, or imprisonment in proportion. In the event of their being guaranteed these fines will be subject to appeal before the Ministry of Public Works.

ART. 47.—The possession or use of clandestine radio electrical installations will be punishable by fine up to 20,000 bolivares and also by Government confiscation of apparatus and instruments: without predjuice to a prosecution that might be taken up, when besides infringing these conditions the fact constitutes an offence against the security of the State or the Constitutional Powers.

SECOND SECTION.—INSTRUCTIONS.

ART. 48.—By separate resolutions the Ministry of Public Works will draw up the instructions to be observed in the radiotelegraph service; it will fix the places where the stations shall be installed; it will grant the permits referred to in Article 8; it will organise the instruction and examination of operators; it will fix bases for bookkeeping, and will prescribe all rules of a technical character that have to be observed in the service.

Given, signed, sealed with the Seal of the Federal Executive and countersigned by the Minister of Public Works, at the Federal Palace, Caracas, on the thirty-first day of the month of January, 1921. The 111th year of Independence and the 62nd of the Federation.

(Place for the Seal.)

V. MARQUEZ BUSTILLOS.

Countersigned.

G. TORRES,
The Minister of Public Works.

MINISTRY OF PUBLIC WORKS.
UNITED STATES OF VENEZUELA—MINISTRY OF PUBLIC WORKS—DIRECTION GENERAL OF STATISTICS AND COMMUNICATIONS.

B CARACAS, 31st January, 1921.
111th and 62nd Year.

It is Resolved:

By Order of the Provisional President of the Republic and in conformity with Article 48 of the Radiotelegraphic Regulations for the following to be binding.

INSTRUCTIONS FOR RADIOTELEGRAPHIC STATIONS.
PRELIMINARY REMARKS.

The present instructions contain the rules which must be observed by the Venezuela stations in the execution of the Radiotelegraphic Service.

These rules refer principally:
(1) To the tariff.
(2) To the transmission of radiotelegrams.
(3) To the admission and classification of messages.
(4) To the signals adopted.

Besides the present instructions, the object of which is to facilitate the regularity of the service, the Venezuelan radiotelegraphic stations will be subject to the Law of Telegraphs and Telephones, to the International Telegraphic Convention, and the International Radiotelegraphic Convention, as well as the regulations annexed to these. The said date will furnish the basis for the execution of the service in the International *régime*.

The stations will be also subject to the telegraphic tariff used in Venezuela and to those besides which link up the service with the exterior so as to make up the total rate of each message. Likewise they will be subject to the nomenclature of the radiotelegraphic stations, and finally to all the legal conditions and Venezuelan regulations referring to the radiotelegraphic service.

No. 1.—RADIOTELEGRAPHIC STATIONS.

A. Radiotelegraphic stations are shown in the "nomenclature of radiotelegraphic stations." This nomenclature gives the following particulars in regard to every station:—

(1) For coast stations the name, nationality, and geographical position indicated by the territorial division, and by the longitude and latitude of the place; for ship stations, the name, and nationality of the ship, and in certain cases the name and address of the owner.

(2) The call signal. (The signals are different from one another, and each one is formed by a group of three letters.)

(3) Normal range.

(4) The radiotelegraphic system of transmission (musical spark, tonality expressed by the number of duplicate vibrations, etc.)

(5) Length of waves used. (The length of the normal wave is underlined.)

(6) The nature of the services effected.

(7) The hours of opening.

(8) If the case should arise the hour and method of sending hourly signals and meteorological reports.

(9) The coast and ship tariff.

B. The name of the ship station as shown in the first column of the nomenclature is followed in case of ambiguity by the call signal of the station.

C. The following abbreviations are used in service documents:—

P.G.—Station opened for public correspondence in general.
P.R.—Station opened for restricted public correspondence.
P.—Station opened for private interests.
O.—Station opened only for official correspondence.
N.—Station for permanent service.
X.—Station with no fixed intermission.

D. At coast stations the service will be as far as possible permanent by day and night without interruption. Nevertheless, some stations can carry on a service of limited duration.

Coast stations where the service is not permanent may not suspend their work until having transmitted all their radiotelegrams to the ships which are in the sphere of action, nor until after having received from these ships all the radiotelegrams advised. This condition is likewise applicable when ships signal their presence before the suspension of work has been effected.

E. Ship stations are divided into three categories :—

(1) Stations for permanent service.
(2) Stations for limited service.
(3) Stations with no fixed intermission.

During navigation the following must remain in expectation of reception :—

(1) Stations under the first category.
(2) Those under the second category during service hours, and outside of those hours during the first ten minutes of each hour.

Stations of the third category are not bound by any regular waiting service.

The radiotelegraphic service of the ship station is under the supreme authority of the commander or captain of the ship.

F. Fixed stations of the terrestrial zone are divided according to their purpose into four categories, namely :—

(1) Central station
(2) Local stations.
(3) Training stations.
(4) Portable stations.

G. The central station as regard service is bound by obligations of the coast stations.

Local internal stations, which, on account of their position, are outside of communication with ships, will be worked like ordinary national telegraph offices.

Training and portable stations will be governed by the special provisions concerning them which will be prescribed in each case by separate resolutions.

H. All fixed radiotelegraphic stations will be linked with the telegraphic system of Venezuela. By the latter, radiotelegrams can be sent and received.

No. 2.—RADIOTELEGRAPHIC CORRESPONDENCE.

A. Every person has the right to make use of International radiotelegraphic communication.

The sender of a private telegram is obliged to prove his identity when asked by the office or station of origin.

The right to correspond radiotelegraphically is subject, nevertheless, to the fulfilment of the local regulations and tariffs.

B. The Government does not accept any responsibility by reason of the radiotelegraphic service supplied to private people.

C. The text of the telegram must be written legibly in characters which have their equivalent on the telegraphic signals used in Venezuela. These characters are as follows :—

LETTERS.

A B C D E F G H I J K L M N O P Q R S T U V W X Y Z.
ä ñ ö ü.

FIGURES.

1 2 3 4 5 6 7 8 9 0

SIGNS OF PUNCTUATION.

Full stop (.) ; comma (,) ; semi-colon (;) ; colon (:) ; note of interrogation (?) ; exclamation mark (!) ; apostrophe (') ; hyphen (-) ; parenthesis () ; inverted commas (" ") ; oblique (/) underline (__).

D. The various parts of which a telegram is composed should be written in the following order :—

(1) Supplementary instructions.
(2) The address.
(3) The text.
(4) The signature.

E. The sender must write on the form immediately before the address the supplementary instructions.

Multiple radiotelegrams will have this remark written immediately before the addresses concerned.

The remark "Urgent" is not admitted in Venezuela except on the ordinary telegraphic system.

F. Every address must contain at least two words. The first giving the name of the addressee, the second indicating the station of destination. Nevertheless, if the address is lacking in further necessary particulars for the addressee to be traced without difficulty by the office of destination the sender shall abide by the consequences of insufficient address.

G. The address of radiotelegrams destined for ships must be as full as possible. They must necessarily contain :—

(*a*) Name or capacity of the addressee with supplementary particulars if need be.
(*b*) Name of the boat as shown in the first column of the nomenclature.
(*c*) Name of the coast stations as shown in the nomenclature.

Nevertheless, the name of the ship may be substituted at the sender's risk by the route indication and determined by the name of the ports of origin and destination or by some other similar remark.

H. Telegrams without text are admitted.

The text may be written in plain language or in secret language, and in the latter case it may be in code language or in cypher language. Each one of these languages may be used singly or in combination with others in the same telegram.

It can also be written by means of the International Code of signals. The radiotelegraphic station will not translate this text when the telegram has to be retransmitted to another station.

I. The station of origin in Venezuela does not admit messages in secret language except on condition that they fulfil the requirements established in Article 45 of the radiotelegraphic Regulations. This provision is not applicable to transit telegrams.

J. Plain language is understood to be that which suggests an intelligible meaning in one or more of the languages authorised for International telegraphic correspondence.

The use of code addresses, commercial signs, international code signals, abbreviations, initials such as f.o.b., c.i.f., or analogous terms do not deprive the telegram of its plain language character.

K. Code language is composed of words that do not form intelligible sentences.

Words actual or artificial must be pronounceable in Spanish, German, French, Dutch, English, Italian, Portuguese or Latin.

Artificial words must not bear accented letters.

Code language words must not have more than ten characters of the Morse alphabet. The ch or any other combination of vowels or double consonants will be counted as two letters in artificial words.

Words formed by the combination of two or more in plain language against the usage of the language are not admitted.

L. Cypher language is that formed by—

(1) Either Arabic cyphers, groups or series of Arabic numbers with a secret meaning, or by letters (unaccented), groups or series of letters with a secret meaning.

(2) Words, names, expressions or combinations of letters which do not fulfil the conditions of plain language nor of code language

The mixture of cyphers and letters with a secret meaning is not admitted in the same group.

The groups referred to under Paragraph J are not considered to be of secret meaning.

M. The signature is not obligatory; it may be written by the sender in accordance with custom or substituted by a registered address.

It is indispensable for every message to be signed in Venezuela, although the signature need not be transmitted, at any rate the registered address used as the signature must be translated at the foot of the telegram.

No. 3.—OFFICIAL RADIOTELEGRAMS.

A. An official message is understood to be that dealing with matters of public service and sent by a Government official in the exercise of his duties.

B. Official radiotelegrams must bear the seal of or a memorandum from the sending official unless there is no doubt of their authenticity.

C. The right to send a reply as an official radiotelegram is proved by the production of the message requiring it.

D. Official radiotelegrams can in any case be written in secret language.

E. The receiving station must repeat official messages; partially if they are written in plain language, and wholly if in secret language.

No. 4.—SERVICE RADIOTELEGRAMS.

A. Only authorised employees can send service radiotelegrams free. This privilege is limited to radios that present an urgent character and they must be written in a concise form. Exclusive of such cases the station may refuse the message or forward a duplicate by post.

B. Service advices may also be exchanged free of tariff between two or more stations respecting repetitions, rectifications, or cancellation of messages or anything affecting the correct transmission.

C. When the service advice is requested by a private person ir will be charged according to the tariff. In communications with boats the advice may only refer to the rectification of radios previously transmitted. The letters S.T. must precede the preamble of these radiotelegrams. If there should be need to rectify a word it will be indicated by the position it occupies in the text of the message, independent of the rules of taxation.

No. 5.—METHOD OF COUNTING WORDS.

A. All that which the sender writes on the form for transmission is subject to taxation, and is included in the number of words. Hyphens which separate words and signs of punctuation are only transmitted by special request or when they form groups of signs in secret language, and in these cases they are subject to tariff.

B. The name of the station, number of the radiotelegram, time of handing in and other indications in the preamble are not counted or charged unless the sender inserts any of these remarks in the text of his radiotelegram, and then they form part of the number of chargeable words.

C. One word is counted for the following in all languages:—

(1) In the address.

(*a*) The name of the office of destination (or the coast station) written as shown in the first column of the Nomenclature with the relative indications.

(*b*) The names of the territorial subdivisions respectively written in accordance with the Nomenclature.

(2) The name of the ship as shown in the first column of the Nomenclature.

(3) The code words fulfilling the conditions under paragraph K of No. 2.

(4) Every isolated character, letter or cypher, as well as every sign of punctuation, apostrophe or hyphen transmitted at the sender's request.

(5) The underline.

(6) The parenthesis signs.

(7) The inverted commas.

(8) The supplementary instructions.

D. In plain language any word or authorised group containing fifteen letters of the Morse alphabet is reckoned as a single word. Any characters in excess, should there be any, are calculated as an additional word.

In code language every ten characters are counted as one word.

In cypher language every five letters or numbers are counted as one word.

E. If in the same message there should be complete sentences in plain language and in code language or cypher language the words in each sentence will be counted according to the former rule; but if there should be code or cypher words intercepted in the plain language the whole radiotelegram will be considered as cypher, and if without cyphers as code language.

F. Words joined by hyphens and apostrophes will be counted as separated and the syllabic sounds by the number of letters of which they are composed.

G. The combination of words against general usage is not admitted. Usage is justified if the point should arise by reference to a dictionary of the respective language.

H. The counting of words at the station of origin is decisive, but if the office of destination should discover an error it may claim the excess from the addressee, and if the latter should refuse to pay it have a service advice sent for the amount to be collected from the sender. When the latter has paid the difference another service advice will be sent authorising delivery of the message.

No. 6.—TARIFFS AND TAXATION

A. Radiotelegrams originating from a ship are taxed as addressed to the nearest coast station. In the charge the supplementary telegraphic tariff will be included.

B. When the sender gives instructions on his message for the retransmission of the radiotelegram to another station he shall pay the tariff relative to each service. This rule will be applied when the retransmission of a radio

sent by land is effected through two or more ship stations.

C. The total rate for telegrams will be collected from the sender except :—

(1) Express charges.

(2) Porterage charges by the station of destination.

(3) In cases provided for under letter G of this paragraph.

D. The rate will be collected in bolivares, and foreign tariffs will in each case be converted to this currency.

E. Rates will be fixed in accordance with the particulars in the Nomenclature.

F. Ship stations may obtain information from coast stations when they are not in possession of all the necessary particulars for making up the rate of the telegrams.

G. When the transit tax is not shown in the Nomenclature the office of origin will include in the preamble the remark "tax to be collected." The same thing will be done when it is from a sender in a country not adherent to the International Conventions.

H. The sender of the radiotelegram has the right to ask for a receipt with a note of the amount collected. The office of origin may charge a fee for this of 25 cents.

No. 7.—TRANSMISSION OF RADIOTELEGRAMS.

A. The length of a normal wave is 600 metres. Every station must be equipped so as to be able to send waves of 300 metres as well. But it must always be in condition to receive calls made by means of the normal wavelength.

B. Stations intended exclusively for determining the position of ships must not use wavelengths exceeding 150 metres.

C. The foregoing conditions, indispensable to a good public service shall not prevent, if the case should arise, for the Government to make any variations which it may judge convenient for its radiotelegraphic correspondence.

D. Stations must maintain traffic with the least waste of power. Ship stations must not use more than 1 kw. unless the boat is obliged to communicate at a distance exceeding 200 nautical miles, or when exceptional circumstances require an increase in power.

E. The exchange of signals, superfluous words, experimenting or practice, that may disturb the service of other stations is forbidden For this reason training and portable stations will use wavelengths different to the normal.

F. Should the foregoing rules be infringed the station must lodge a complaint in detail to the Direction-General of Federal Telegraphs and Telephones.

No. 8.—TRANSMITTING SIGNALS.

A. The Morse Code signals are used in the service.

B. The spacing and length of the signals is as follows :—

(1) The dash is equal to three dots.

(2) The space between the signals of the same letter is equal to a dot.

(3) A space between two letters is equal to three dots.

(4) A space between two words is equal to fivo dots.

C. Letters are represented by the signal shown in the following table :—

a	· —	n	— ·
ä	· — · —	ñ	— — · — —
á	· — — · —	o	— — —
b	— · · ·	ö	— — — ·
c	— · — ·	p	· — — ·
ch	— — — —	q	— — · —
d	— · ·	r	· — ·
e	·	s	· · ·
é	· · — · ·	t	—
f	· · — ·	u	· · —
g	— — ·	ü	· · — —
h	· · · ·	v	· · · —
i	· ·	w	· — —
j	· — — —	x	— · · —
k	— · —	y	— · — —
l	· — · ·	z	— — · ·
m	— —		

D. The figures are represented as follows :—

1	· — — — —	6	— · · · ·
2	· · — — —	7	— — · · ·
3	· · · — —	8	— — — · ·
4	· · · · —	9	— — — — ·
5	· · · · ·	0	— — — — —

In office repetitions and in the preamble and in cypher telegrams with the remark "in cypher" numbers may be abbreviated as follows :—

1	· —	6	— · · · ·
2	· · —	7	— · · ·
3	· · · —	8	— · ·
4	· · · · —	9	— ·
5	· · · · ·	0	—

E. Signs of punctuation and other indications are represented as follows :—

Punto (.)	· · · · · ·
Coma (,)	· — · — · —
Punto y coma (;)	— · — · — ·
Dos puntos (:)	— — — · · ·
Punto de interrogación o demanda de una transmisión no comprendida (?)	· · — — · ·
Punto de admiración (!)	— — · · — —
Apóstrofe (')	· — — — — ·
Guión (-)	— · · · · —
Raya de fracción (/)	— · · — ·
Paréntesis, antes y después de las palabras ()	— · — — · —
Comillas, antes y después de las palabras (" ")	· — · · — ·
Subrayado antes y después de las palabras o de las frases	· · — — · —
Llamada (preliminar de toda transmisión)	— · — · —
Doble guión (=)	— · · · —
Comprendido	· · · — ·
Error	· · · · · · · ·
Cruz (+)	· — · — ·
Invitación a transmitir	— · —
Espera	· — · · ·
Fin de trabajo	· · · — · —
Señal de siniestro (repetida a cortos intervalos)	· · · — — — · · ·

In the transmssion of fractions, whole numbers should be separated from the fractions

by the double hyphen (=) so as to avoid—*e.g.*, 11/4 being confused with 1=1/4.

F. When a station notices the distress signal ● ● ● ▬ ▬ ▬ ● ● ● it shall suspend all correspondence, and not renew it until having made certain that the communication which originated by the call for help has been concluded.

G. The station which perceived a call for help must obtain all necessary particulars from the ship making the call as regards the order of the communications or the cessation of them.

H. When a signal for help is addressed to a particular station it devolves upon the latter to reply unless it cannot reply. In the absence of a special indication each station is obliged to answer.

I. Stations must alternate in their transmission of radiotelegrams and each series should not exceed fifteen minutes.

J. A transmission begun shall only be suspended in case of absolute urgency.

K. Radiotelegrams of the same category shall be forwarded in the order in which they are handed in.

L. The order of priority is as follows:—

(1) Official radiotelegrams in accordance with the rank of the sending official.

(2) Service radiotelegrams.

(3 Private radiotelegrams.

M. The call signal is composed of the sign ▬ ● ▬ ● ▬ followed by the call repeated three times by the station called, the word "from" and the signal repeated three times from the station calling.

N. The station called replies by the signal ▬ ● ▬ ● ▬ followed by the call signal repeated three times from the station in question by the word "from" its call signal, and the sign ▬ ● ▬

O. As a general rule the ship station is the one that calls the coast station whether the latter should have radiotelegrams to transmit or not.

P. Stations which want to communicate with ships without knowing the names of those in their sphere of action may use the exploration signal ▬ ● ▬ ▬ ● ▬ ● ▬

Q. Every station that is obliged to effect transmission of high power first of all sends the advice signal three times ▬ ▬ ● ● ▬ ▬ with the minimum power required for reaching the neighbouring stations. The high power shall not be begun to be transmitted until thirty seconds after the despatch of the advice signal.

R. If a station cannot reply to a call signal which is repeated three times at intervals of two minutes each, the call cannot be repeated until an interval of fifteen minutes has elapsed. The station calling verifying that there is no other radiotelegraphic communication in progress.

S. The ship station must inform each coast station to whom it has signalled its presence when it proposes to cease operations, and how long the interruption will last.

T. As soon as the coast station has replied the ship station will furnish the information that follows, if it has messages to be transmitted to it, the following information will also be given when the coast station asks for it:—

(*a*) The approximate distance in nautical miles from the ship to the coast station.

(*b*) The position of the ship shown in a concise manner, clear and applicable to the circumstances of the case.

(*c*) The nearest port at which the ship will touch.

(*d*) The number of radiotelegrams, if they are of ordinary length, or the number of words if they are exceptionally long.

The speed of the ship in nautical miles will be specially shown at the particular request of the coast station. The coast station should reply at once and indicate the number of radiotelegrams that it has to transmit.

In case the transmission cannot be made immediately, both should communicate the approximate duration of the time of waiting.

Between two ship stations it devolves upon the station called to fix the order of transmission.

When a coast station receives calls from various ship stations it shall decide the order for reception endeavouring for this purpose to procure from every station taking part the transmission of the greatest number of radiotelegrams.

A telegram which is not in order must not be delayed or refused. It must be received and a request made if necessary by service advice for correction.

U. Before beginning a transmission a ship station shall advise whether it should be done in series or in alternate order; the transmission will then be begun by means of the signal ▬ ● ▬

V. The transmission of the radiotelegram is preceded by the signal ▬ ● ▬ ● ▬ The station proceeds at once with the transmission of the preamble in the following order:—

(*a*) Service remark "radio."

(*b*) Nature of the radiotelegram by one of the remarks S, A, D, according to whether it is an official message, service advice, or a private urgent message.

(*c*) The letter B is only used when the station is in direct communication with the station of destination.

(*d*) Office of origin or ship station.

(*e*) Number of the telegram.

(*f*) Number of changeable words.

(*g*) The time of handing in by two groups of figures: the first showing the day of the month, and the second the hour and minutes.

Ship stations shall show the time by the numbers 0 - 24.

(*h*) The route to be followed will be shown on the form.

(*i*) Service remarks.

W. After the preamble the supplementary instructions, the address, the text and the signature will be consecutively transmitted.

The double hyphen (▬ ● ● ● ▬) is transmitted so as to separate the preamble from the supplementary instructions and the other parts of the telegram.

The transmission concludes with a signal ● ▬ ● ▬ ● followed by the signal of the sending station and by the signal ▬ ● ▬. In the case of a series the signal and the sign ▬ ● ▬ will not be given until the end of the series.

When a radiotelegram contains more than forty words the sending station may interrupt the transmission after every twenty words more or less by means of a sign of interrogation ● ● ▬ ▬ ● ● and will not go on with the transmission until the repetition of the last word has been properly received, followed by a note of interrogation or if the transmission is correct by the signal ▬ ● ▬ If the operator, who is making the transmission, finds that he has made a mistake he will interrupt it by the error signal ● ● ● ● ● ● ●, the last word which was correctly transmitted being repeated and the rectified transmission continued.

In the case of transmission by series the advice of receipt will be given after every radiogram.

The coast stations occupied in transmitting long radiotelegrams must suspend transmission at the end of a period of fifteen minutes, and keep silent for three minutes before continuing the transmission.

X. The advice of receipt will be given by means of the letter R followed by the number of the radiotelegram received. This advice is preceded by the indication signal of the sending station and followed by that of the receiving station.

Y. The conclusion of the operation between two stations is indicated by each one by means of a signal ● ● ● ▬ ● ▬ followed by the relative indication.

Z. When signals are doubtful the radiotelegram may be repeated up to three times. If it is still illegible it is cancelled.

In any case the receiving station can send it to its destination bearing the service mark "reception doubtful."

The sender of a radiotelegram who establishes his identity may cancel it. If it should not have been transmitted the charges will be returned to him with the exception of a tax of 25 cents. bolivares.

If the transmission should have already been effected the cancellation will be made by a taxed service advice.

No. 9.—FORWARDING TO DESTINATION.

A. The sender may order a radio to be sent by telephone. If so, the word "Telephone" shall be written before the address.

B. For despatch to destination radiograms are classified in the same order of priority as for transmission.

C. Radios with the remark "Day" are not delivered during the night; those received during the night are not immediately delivered unless they contain the word "Night," or the receiving station should consider them to be of a real urgent character.

D. The radiogram may be delivered in the absence of the addressee to the members of his family, and to persons in his employ. The remark "M.P." or "manos propias," *i.e.* (own hands), as well as the remark "Open," are only admitted in official correspondence.

E. When the radiograms cannot be delivered the station of destination shall explain the reason by service advice. If need be, a mistake in the address will be corrected.

F. Radiograms not transmitted shall be sent by post to the Direction-General of Federal Telegraphs and Telephones to be filed.

G. When a radiogram has to be transmitted to a boat and the latter is not yet within range of the station, it will be treated like a message not transmitted, the sender being advised on the eighth day unless the latter should order another waiting period of nine days. If the station is sure that the ship has sailed from its range it may cancel the message and advise the sender.

Let it be communicated and published.

By the Federal Executive,

G. TORRES.

VIRGIN ISLANDS

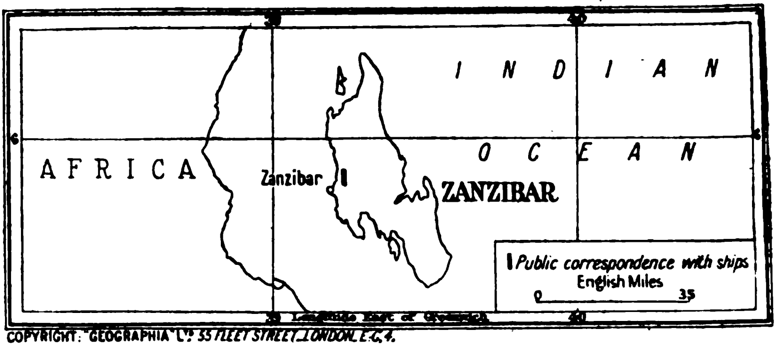
(See LEEWARD ISLANDS.)

WEIHAIWEI

(See CHINA, FOREIGN SETTLEMENTS.)

ZANZIBAR PROTECTORATE

THE Zanzibar Protectorate includes the islands of Zanzibar and Pemba. The main island, which is known as Zanzibar, covering an area of 640 square miles, lies in 6° south latitude, and is separated from the mainland by a channel 22½ miles across at its narrowest part. It was not until during the sixteenth century that the Arabs of the East Coast suceedecd in driving out the Portuguese, and the island was then attached (more or less nominally) to the rulers of Muscat.



CONTROL.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	*Title.*	*Address.*
Mr. R. Withycombe, M.B.E. ..	Director of Electricity, Railways, and Wireless Telegraphy	Zanzibar
Mr. S. W. Dyer	Assistant do. do. ..	Zanzibar

ORGANISATION.

The Government maintains wireless stations in Zanzibar, Pemba (see map on p. 554) and Mafia.

Pemba open for Public General Correspondence.

ADMINISTRATION.

We append herewith the Decree issued by the Sultan in 1909 in regard to wireless.

WIRELESS TELEGRAPHY DECREE.
No. 6 of 1909.
In the name of the Most Merciful God.
It is hereby declared as follows :—

1. (1) No person shall establish any wireless telegraph station or instal any apparatus for wireless telegraphy in any place in our dominions except under and in accordance with a license granted in that behalf by our First Minister.

(2) Every such license shall be in such form and for such period as our First Minister may determine, and shall contain the terms, conditions and restrictions on and subject to which license is granted, any such license may include two or more stations or places.

(3) If any person establishes a wireless telegraph station without a license in that behalf or instals or works any apparatus for wireless telegraphy without a license in that behalf, he shall be guilty of an offence against this Decree, and on conviction he shall be liable to a fine not exceeding 1,500 rupees, or to simple imprisonment for a term not exceeding twelve months, or to both, and in either case be liable to forfeit any apparatus for wireless telegraphy installed or worked without a license, but no proceedings shall be taken against any person under this Decree except by the order of our First Minister.

(4) If the Court is satisfied by information on oath that there is reasonable ground for supposing that a wireless telegraph station has been established without a license in that behalf, or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any ship within its jurisdiction without a license in that behalf, it may grant a warrant to any officer of our police to enter and inspect the station or place or ship, and to seize any apparatus which appears to him to be used, or intended to be used, for wireless telegraphy therein.

(5) Our First Minister may make regulations for prescribing the form and manner in which applications for licenses under this Decree are to be made and fees payable on the grant of any such license.

2. Where the applicant for a license proves to the satisfaction of our First Minister that the sole object of obtaining the license is to enable him to conduct experiments in wireless telegraphy, a license for that purpose shall be granted, subject to such special terms, conditions, and restrictions as our First Minister may think proper, but shall not be subject to any rent or royalty.

3. No person shall work any apparatus for wireless telegraphy installed on any ship whilst that ship is in the waters of our dominions otherwise than in accordance with regulations made in that behalf by our First Minister, and our First Minister may by any such regulations impose penalties for the breach of any such regulations not exceeding 150 rupees for each offence, and may provide for the forfeiture on any such breach of any apparatus for wireless telegraphy installed or worked on such ship. Save as aforesaid, nothing in this Decree shall apply to the working of apparatus for wireless telegraphy installed on any foreign ship.

4. The term "ship" includes steamers, sailing ships dhows, lighters, rafts, and every other form of boat. The expression "wireless telegraphy" means any system of communication by telegraph as defined in "The Indian Telegraph Act, 1885" without the aid of any wire connecting the points from and at which the messages or other communications are sent and received.

Provided that nothing in this Decree shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

5. This Decree may be cited as "The Wireless Telegraphy Decree, 1909."

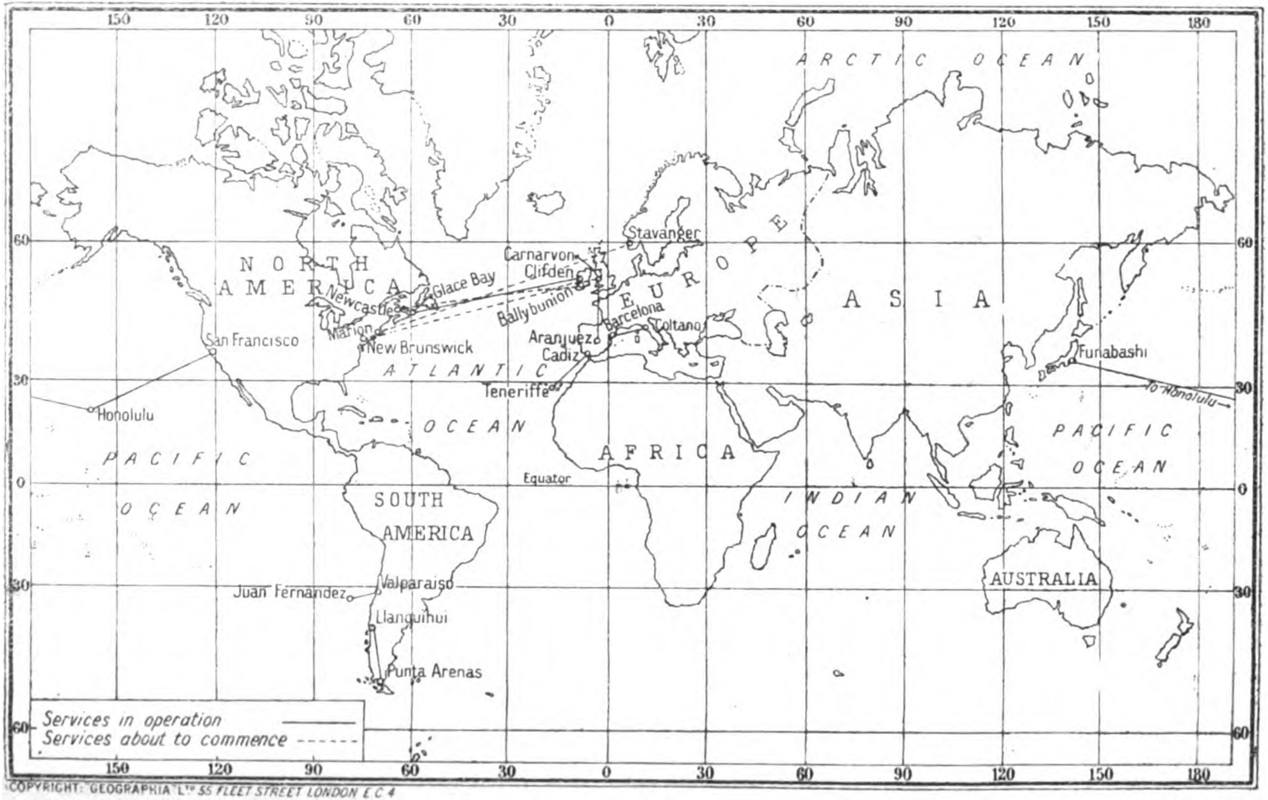
Given under our hand and seal this 9th day of February, 1909.

ALI-BIN-HAMOUD.

Countersigned under the provisions of Article 47 of "The Zanzibar Order in Council, 1906."

JOHN H. SINCLAIR,
British Agent and Consul-General.

DIRECTORY OF THE WORLD'S WIRELESS STATIONS



(A) Land Stations.

(B) Shipboard Stations.

(C) International Call Letters.

(D) Alphabetical List of Call Letters.

THE WORLD'S WIRELESS COMMERCIAL SERVICES

WIRELESS TELEGRAPH STATIONS OF THE WORLD

A. Land Stations
B. Ship Stations

THE tables of land stations set out in the following pages should be consulted in conjunction with the maps showing the position of wireless telegraph stations inserted in the Laws and Regulations Section (see pp. 81 to 554). The stations have been grouped together under the names of the countries in which they are situated, and these countries have been arranged in alphabetical order; therefore no difficulty is likely to be experienced in locating any particular station. Avia'ion stations are shown in the apposite section of this volume.

The International Bureau has allotted to signatories of the Convention a list of combinations of letters to be used as call signals for stations proper to the respective countries. The letter limitations of these lists are given in this section, together with the names of the countries with which they are connected.

An alphabetical list of call letters for land and ship stations closes this section. The list indicates upon which page particulars of any station may be found.

Stations of a private or experimental character are omitted, unless exceptional circumstances warrant their inclusion.

Every effort has been made to attain the maximum degree of accuracy possible in these lists, but no responsibility can be accepted, however, in this connection.

A. LAND STATIONS

The following abbreviations are used in the Table of Land Stations below:—(Geographical Position): E—East Longitude; W—West Longitude; N—North Latitude; S—South Latitude. (Nature of Service): P G—General Public Correspondence; P R—Restricted Public Correspondence; O—Official Correspondence; P—Private Correspondence; D F—Direction Finding Service. (Hours of Service): N—Continuous Service; X—No fixed working hours.

N.B.—The times shown are G.M.T. unless otherwise stated.

[1] For radiotelegrams exchanged with ships subject to the administration of Australia or of New Zealand

[2] For radiotelegrams exchanged with ships other than those subject to the administration of Australia or of New Zealand

[3] Meteorological forecasts are transmitted free of charge by coast stations at the following hours (Melbourne time): Adelaide Radio, 1900 and 2030; Melbourne Radio, 1930 and 2100; Sydney Radio, 2000 and 2130; Hobart Radio, 2200; Brisbane Radio, 2230 and 2300

[4] The station transmits time signals (see International Time and Weather Signals)

[5] The station transmits weather forecasts when necessary or when requested by vessels

[6] Connected with the International Telegraph System by wireless through Melbourne Radio

[7] In the case of radiotelegrams originating at or intended for Flinders Island the charge for local delivery is included in the coast tax

[8] The working of the station is temporarily suspended

[9] Connected with the International Telegraph system by wireless through Hobart Radio

[10] Mean time of the meridian 120° E. of Greenwich

[11] With wavelength of 600 metres

[12] With wavelength of 2,500 metres

[13] Connected with the International Telegraph

telegrams originating at or intended for Port of Spain (Trinidad), or Scarborough (Tobago), the charge for transmission between the coast station and either of these places is included in the coast charge. Coast station gives any information on charges for other destinations

[3] The coast charge is reduced to 15 centimes per word with a minimum of 1 fr. 50 c. for messages exchanged with the s.s. "Belize," while that vessel is plying between Trinidad and Tobago

[4] The station also exchanges public and official correspondence with Trinidad

[1] Eastern European time

[1] Weather forecasts, transmitted free of charge on request. Messages concerning navigation to any department or officer of the Government handled free of coast tax. Weather and ice reports from captain of a vessel also free of coast charge

[2] For radiotelegrams sent by or addressed to the commander of a ship relating to the service of the ship the coast tax is reduced to fcs. 0.25 per word. The preamble of such messages should contain the service instruction S B

[3] Cape Sable and Sable Island communicate with the land telegraph system through Camperdown

The retransmission charge

[1] The charge is reduced to 20 centimes for correspondence with ships engaged on a regular service on the coast of New Caledonia and Dependencies

[2] With 600 m. wave

[3] With 2,000 m. wave

[4] The wavelengths of 2,000 and 2,500 m. are used for messages exchanged with Apia (Samoa Is.) every day from 1930 until completion of traffic

[5] Meteorological reports and navigation notices are transmitted twice daily at 1100 and 2300. (See International Time and Weather Signals)

[6] Connected to the International Telegraph System by wireless through Apia (Samoa Is.) and Awanui Radio, New Zealand

[7] The station also communicates with Tutuila, using 600 m. wave

Remarks:

chiefly during the first fifteen minutes of each of its hours of service

[8] The station transmits a time signal. (For full particulars see International Time and Weather Signals)

[9] Official correspondence with Tralleborg and with the ferry boats of the Sassnitz-Tralleborg line. Public correspondence is also exchanged with the latter

[10] The station is prepared to receive calls chiefly during the first fifteen minutes of the second half of each of its hours of service

[11] Public correspondence for urgent navigation messages only

[12] Special maritime notices are transmitted three times when they first come to hand and so long as the necessity exists are repeated three times at noon and midnight daily

[13] The station accepts public correspondence when there is no naval correspondence

[14] The station undertakes only the exchange of correspondence between the "Norddeutscher Lloyd" and their ships,

and the transmission of semaphore telegrams originating at or destined for Weser Feuerschiff

[15] A ship requiring bearings should call the station Wilhelmshaven III Einfahrt F.S. (call-signal KAN) on a damped wave of 600 metres. That station makes the necessary arrangements, in conjunction with the three direction finding stations which are concerned, and communicates the position ascertained in longitude and latitude to the ship concerned. These stations are only available for public service when not in use by the Navy. No charge is at present made for the service, which is in the nature of an experiment

[1] The station is connected with the International Telegraph System by wireless through

[1] Exclusively for the service of the steam ferry boats of the Strait of Messina

[2] Radiotelegrams in plain language, Italian, French or English, concerning the movements and security of ships, and exchanged between the captains of ships and their owners or agents, are accepted

[3] This station is opened for public service direct to Italian Somaliland and Erythrea communicating with Mogadiscio ISG (Italian Somaliland) and Massaua ICX (Erythrea)

[4] Maintains a continuous watch on 600 metre wave. Also performs a limited service for military purposes

[5] Serves Messina Radio in the sector in which the latter is "screened"

[6] D.F. with transmitting apparatus. Ships requiring bearings should call Venezia Radio

[illegible] the night [illegible] occupied with official correspondence: 0800–0900, 0930 – 1100, 1130 – 1300, 1330 – 1500, 1530 – 1700, 1730–1800

[5] The station also exchanges public correspondence with Koko Head NPM (Hawaiian Islands)

[6] The station transmits each day time signals on a wavelength of 4,000 metres except Sundays. (See International Time and Weather Signals)

[7] Lighthouse

[8] Correspondence limited to the other lighthouses in Chosen, with the ship Kosai Maru belonging to the Chosen Government and Japanese warships

[9] For official correspondence

[10] The station only corresponds with other fixed stations

[11] Public correspondence with the Japanese ship stations. The station also communicates with the other coast stations in Japan

[12] This station connects with the International Telegraph System through the medium of Otchishi Radio

[13] The station is open approximately from May 1st to September 30th

[14] This charge includes the charge for transmission between Horomushiro Radio and Otchishi Radio

[1] Communicates only with fixed stations

[2] Sends meteorological message at 1345 hours daily (G.M.T.)

[5] In addition, a continuous listening service for distress signals is maintained

[6] Meteorological radiotelegrams are sent free of charge at the following hours (except Saturdays and Sundays):
Awarua Radio 8.30 p.m.
Wellington Radio 9 p.m.
Awanui Radio 10 p.m.

[7] The relaying rate is 42 centimes per word

[8] Time signals are sent free of charge on Tuesdays and Fridays at 8.30 p.m.

[1] The night service is performed alternately by the Flekkeröy Radio and Tjöme stations. Flekkeröy Radio is open during the nights of Tuesday, Thursday and Saturday. Tjöme is open during the nights of Monday, Wednesday, and Friday. The service between 0800 Sunday and 0800 Monday is performed alternately by the two stations

[2] During the months from May to September

[3] During the months from October to April

[4] Röst and Sörvaagen intercommunicate by wireless

[5] Transatlantic public service to U.S.A.

[6] For communication with Sörvaagen and Röst Radio

[7] For communication with Ingöy Radio

[8] Under construction

ordinary telegrams exchanged with Rathlin Island

[3] Peterhead, Berwick and Flamborough direction finding stations are linked together by special landline, enabling any one to control the other two if required

[4] At the present the handling of public correspondence has been suspended

[5] This coast tax applies to messages exchanged with all ships except those engaged on short voyages and where special arrangements have been made with the Postmaster-General for a reduced coast tax. (See notes 6 and 7.) In the case of telegrams originating in or intended for the United Kingdom the combined coast and landline charge is fr. 0.73 per word

[6] This coast tax applies to messages exchanged with certain vessels making regular voyages of more than 200 miles, but not exceeding 1,000 miles and where special arrangements have been made with the Postmaster General for the application of such tax. In the case of radiotelegrams originating in or intended for the United Kingdom, the combined coast and land line charge is fr. 0.44 per word with a minimum of fr. 4.40 per radiotelegram

[7] This coast tax applies to messages exchanged with certain ships making regular voyages of 200 miles or less, and where special arrangements have been made with the Postmaster-General for the application of such tax.

meridian 180° W. of Greenwich) on the wavelengths of 4,800 metres (arc) and 2,400 metres (spark)

[18] Time signals are sent daily from 1155 to 1200 and 2155 to 2200 (standard time of the meridian 75° W. of Greenwich) on the wavelength of 2,500 metres

[19] Where two or more direction finding stations have the same call signal it indicates that they are connected by telegraph to and under the control of a central control station, the call signal being the call of the central control station. When a request for bearings is made, the central control station invariably answers with a bearing from each of the direction finding stations under its control

The following signals have been authorised and will be used until further notice:—

Signal	Meaning.
QTE ?	What is my true bearing ?
QTE	Your true bearing is . . degrees from . . direction finding station

To obtain bearings, the direction finding station should be called on 800 metres in the usual manner, and the call followed by the signal "QTE ?" meaning "What is my true bearing?" When told by the direction finding station to "K" (go ahead), the ship's operator should follow the procedure outlined below:

(*a*) Transmit the ship's call signal for 30 seconds;

Land Stations—*Continued*

Name.	Geographical Position.	Call Signal.	Normal Range in Nautical Miles.	Controlled by	Wavelengths in Metres (the Normal Wavelength in Heavy Type).	Nature of Service.	Hours of Service.	Coast Charge		Remarks.
								Per Word.	Minimum Charge.	
	Meridian of Greenwich.							Francs.	Francs.	
UNITED STATES OF AMERICA—*contd.*										(*b*) Make dashes, each dash 5 seconds long, for 1 minute, with the ship's call signal after each dash; (*c*) Terminate with the signal "K" (go ahead). If satisfactory bearings are obtained, the operator at the direction finding station will call the vessel in the usual manner and reply "QTE" followed by the true bearing in degrees (0 to 350) spelled out in words, and the name of the direction finding station from which the bearing was obtained; otherwise a repetition of the test will be requested. The ship's operator should acknowledge receipt of the bearings by answering the direction finding station in the usual manner and repeat, in numerals, the bearings received. This procedure enables all stations concerned to check the bearings. All direction finding stations keep watch and transmit on 800 metres for merchant vessels, and this wavelength should be used for calling and answering and carrying on all communication with these stations.

operation of above direction finding stations may be checked up, a brief report should be forwarded to the Director, Naval Communications, Navy Department, Washington, D.C., containing:—

(a) Name of ship;
(b) Name of direction finding station;
(c) Date and Greenwich mean time at which wireless bearing was given;
(d) Bearing given by direction finding station;
(e) Estimated position of ship at above time and date by methods other than wireless;
(f) The probable degree of accuracy of the estimated position;
(g) Weather conditions at above time;
(h) Remarks, if any;
(i) Signature of master or responsible navigating officer.

[20] Only in case of fog

[21] Time signals are sent daily from 1155 to 1200

[22] Shipping traffic, free

[23] Information concerning wrecks, derelicts, ice and other dangerous obstructions to navigation whenever received from the Hydrographic Office or from a branch hydrographic office or other reliable source is sent broadcast four times daily, viz., at 8 a.m., 12 a.m., 4 p.m. and 8 p.m. local (standard) time of the station. Ships within range of a naval radio station should be prepared to receive these hydrographic messages at the hours mentioned and

[1] Operated by the Radio Corporation of America

[1] Operated by the Soc. Anonyme Internationale de Télégraphie Sans fils, Brussels

[2] Ship engaged in Cross-Channel service between Dover and Belgium. Messages exchanged during crossings either between the steamers and Antwerp or Ostend coast stations, or between two of the steamers on this service is applied. The charge per message is 3 frs. per radio telegram of ten words or less, with 20 centimes for each additional word. Messages exchanged with North Foreland station, the ship charge is 10 centimes per word, minimum 1 fr.

[3] Operated and controlled by the owners

[4] Operated by the State Telegraph Administration

Swedish ferry-boats, it is necessary to replace the name of the ship station in the address of radiotelegrams by one of the following indications:—

Ferry-boat A for the boat leaving Sassnitz in the morning;

Ferry-boat C for the boat leaving Sassnitz in the afternoon;

Ferry-boat B for the boat leaving Trälleborg in the morning;

Ferry-boat D for the boat leaving Trälleborg in the afternoon

[15] The ship charge for radiotelegrams intended for the ferry-boats is, without regard to the nationality of the boats, 18 centimes per word, minimum 1 fr. 80 centimes, when the radiotelegrams are transmitted via Sassnitz, and 30 centimes per word, minimum 3 fr., when they are transmitted via Trälleborg

[16] For radiotelegrams liable to charge

[17] Operated by the Dienststelle der Admiralität, Geestemünde

INTERNATIONAL ALLOCATION OF CALL LETTERS

THE BUREAU INTERNATIONAL DE L'UNION TELEGRAPHIQUE OF BERNE allots to the various nations who are parties to the International Radiotelegraphic Convention combinations of " call " letters, which are in turn allotted to ship and land stations. Below we give a list of the letters, and combinations of letters, and the countries to which these have been assigned.

Call letters	Country
A	Germany.
B	Great Britain.
CAA to CEZ	Chile.
CFA to CKZ	British Possessions and Protectorates.
CLA to CMZ	Spain.
CNA to CNZ	Morocco.
COA to COZ	Great Britain.
CPA to CPZ	Bolivia.
CQA to CQZ	Monaco.
CRA to CRZ	Portuguese Colonies.
CSA to CUZ	Portugal.
CVA to CVZ	Roumania.
CWA to CWZ	Uruguay.
CXA to CXZ	Spain.
CYA to CZZ	Mexico.
D	Germany.
EAA to EHZ	Spain and Colonies.
EIA to EZZ	Great Britain.
F	France, French Colonies and Protectorates.
G	Great Britain.
HAA to HAZ	Hungary.
HBA to HBZ	Switzerland.
HCA to HCZ	Ecuador.
HDA to HEZ	*Not yet allotted.*
HFA to HFZ	Yugo-Slavia
HGA to HHZ	Siam.
HIA to HIZ	Dominican Republic.
HJA to HKZ	Colombia.
HLA to HNU	Spain.
HNV to HNZ	New Hebrides.
HOA to HZZ	France, French Colonies and Protectorates.
I	Italy and Colonies.
J	Japan and Possessions.
KAA to KCZ	Germany.
KDA to KZZ	United States of America
LAA to LHZ	Norway.
LIA to LRZ	Argentina.
LSA to LUZ	Great Britain.
LVA to LVZ	Guatemala.
LWA to LWZ	Norway.
LXA to LZZ	Bulgaria.
M	Great Britain.
N	United States of America.
OAA to OBZ	Peru.
OCA to OFZ	Great Britain.
ONA to OTZ	Belgium and Colonies.
OGA to OIZ	Denmark.
OJA to OMZ	*Not yet allotted.*
OUA to OZZ	Denmark.
PAA to PIZ	Netherlands.
PJA to PJM	Curaçao.
PJN to PJZ	Surinam.
PKA to PMZ	Dutch Indies.
PNA to PPZ	Brazil.
PQA to PSZ	Portugal.
PTA to PVZ	Brazil.
PWA to PWZ	Cuba.
PXA to PZZ	Netherlands.
Q	*Reserved for abbreviations.*
R	Russia.
SAA to SMZ	Sweden.
SNA to STZ	Brazil.
SUA to SUZ	Egypt.
SVA to SZZ	Greece.
TAA to TEZ	Turkey.
TFA to TFZ	Iceland.
TGA to THZ	Greece.
TIA to TOZ	Spain.
TPA to TUZ	Norway.
TVA to TZZ	Netherlands.
UAA to UMZ	France, French Colonies and Protectorates.
UNA to UNZ	*Not yet allotted.*
UOA to UOZ	Austria.
UPA to UPZ	Italy.
VAA to VGZ	Canada.
VHA to VKZ	Australian Commonwealth.
VLA to VMZ	New Zealand.
VNA to VNZ	Union of South Africa.
VOA to VOZ	Newfoundland.
VPA to VSZ	British Colonies and Protectorates not autonomous.
VTA to VWZ	British India.
VXA to VZZ	British Colonies and Protectorates.
W	United States of America.
XAA to XDZ	Mexico.
XEA to XMZ	Great Britain.
XNA to XSZ	China.
XTA to XZZ	Great Britain
Y	Great Britain.
Z	Great Britain.

CALL LETTERS

(Alphabetically arranged)

ALLOTTED TO LAND AND SHIP STATIONS.

b = Ship Station. *c* = Land Station.

METEOROLOGICAL SECTION

INTERNATIONAL TIME AND WEATHER SIGNALS.

CURRENT ARRANGEMENTS.

THE meteorological observations sent by wireless are mainly in the old International Code given below. Variations from it are noted under each country which departs from it in any particular.

OLD INTERNATIONAL CODE.

The standard group is represented symbolically by :

BBBDD FWTTC βbbRR MMmmu

Where BBB = barometric pressure in tenths of mm. (the first figure 7 is omitted) reduced to sea-level and corrected for gravity.* If the barometer reading is given in inches, the initial 2 or 3 is usually omitted and the values given to the nearest hundredth. If expressed in millibars and tenths the initial 9 or 10 is omitted. Readings in millimetres can be expressed in millibars by adding ⅓ – *e.g.*, 760 mm. = 760 + ⅓ (760) = 760 + 253.3 = 1013.3 mb.

Similarly, readings in millibars can be expressed in millimetres by taking ¾ of the value—*e.g.*, 1000 mb. = ¾ (1000) mm. = 750 mm.

DD = direction of the wind according to the following code unless otherwise specified :—

02 =	N.N.E.	18 =	S.S.W.
04 =	N.E.	20 =	S.W.
06 =	E.N.E.	22 =	W.S.W.
08 =	E.	24 =	W.
10 =	E.S.E.	26 =	W.N.W.
12 =	S.E.	28 =	N.W.
14 =	S.S.E.	30 =	N.N.W.
16 =	S.	32 =	N.

For calm the figures 00 are used.

F = strength of the wind on Beaufort Scale (see pp. 1128 and 1129).

For forces greater than 9 a special note is usually added at the end of message.

W = state of sky by following code :

0 = sky cloudless—fine.
1 = sky quarter covered.
2 = sky half covered.
3 = sky three-quarter covered.
4 = overcast.
5 = rain.
6 = snow.
7 = mist (not *wet* fog, but fog less thick than for 8).
8 = fog.
9 = thunderstorm.

* This reduction is necessary in order to place the results upon a comparable basis. The complete corrections necessary are (1) *index-error* (given on the certificate of verification) to compensate errors in calibration. N.B. With a Fortin type barometer, the correction will be the same throughout the scale ; with the Kew pattern it will probably differ in different parts of the scale. (2) Sea-level (see tables below). (3) Temperature. (4) Gravity (see tables below) reduced to lat. 45°.

TT = temperature in whole degrees Centigrade. 50 is added to the number when the temperature is negative.

C = direction of motion of upper-clouds (cirrus and cirro-stratus).

0 = clouds with no appreciable movement.
1 = ,, from N.E.
2 = ,, ,, E.
3 = ,, ,, S.E.
4 = ,, ,, S.
5 = clouds from S.W.
6 = ,, ,, W.
7 = ,, ,, N.W.
8 = ,, ,, N.
9 = no observation.

β = characteristic of barometric tendency.*

Figures characterising the change of pressure during the 3 hours preceding the observation :—

	Old Scale.	*New Scale.*
0 =	barometer steady.	steady or rising.
1 =	,, unsteady.	rising, then steady.
2 =	,, rising.	rising, then falling.
3 =	,, falling.	falling or steady, then rising.
4 =	,, falling, then rising.	unsteady, but rising.
5 =	,, steady, then rising.	falling.
6 =	,, steady, then falling.	falling, then steady.
7 =	,, falling, then steady.	falling, then rising.
8 =	,, rising, then steady or falling.	steady or rising, then falling.
9 =	line squall.	unsteady, but falling.

bb = tendency in tenths of mm. 50 is added to the wind direction if the tendency is negative.

RR = rainfall in mm. in the past 24 hours.

MM = maximum temperature } from 7h. of the preceding day to 7h. of
mm = minimum ,, } the day of observation.

u = sea disturbance.
0 = sea calm.
1 = ,, very smooth.
2 = ,, smooth rippled.
3 = ,, slight rippled.
4 = ,, moderate furrowed.
5 = sea rather rough, much furrowed.
6 = ,, rough, deeply furrowed.
7 = ,, high, rollers.
8 = ,, very high rollers.
9 = ,, phenomenal.

W[1] = characteristic of past weather sent at the end of the second group in place of C in 18h. messages.

0 = mainly fine.
1 = fair.
2 = mainly overcast.
3 = sheet lightning.
4 = precipitation, mainly during forenoon.
5 = precipitation, mainly during afternoon.
6 = mainly foggy.
7 = thunderstorm.
8 = passing showers.
9 = persistent precipitation.

HOURLY WEATHER REPORTS.

(See Great Britain.)

The New International Code for hourly weather reports is given under Great Britain (q.v.).

* A cyclone or anti-cyclone seldom travels unchanged in shape and intensity, and the travel of pressure-change is more regular than that of pressure-value. The barometric tendency therefore gives a general idea of the changes of pressure that are in progress.

ROUTE WEATHER REPORTS.

The following code is used for route weather reports.

Station numbers DDFD_1F_1, ALaNh wwWVV BBBKc Cddvv, where

- DD = direction of wind (Scale 0-32).
- F = force of wind on Beaufort scale.
- D_1 = direction of motion of low cloud (2 = E, 4 = S, 6 = W, 8 = N).
- F_1 = speed of low cloud (Code 1).
- A = form of low cloud (Code 2).
- L = amount of low cloud (in tenths of sky covered).
- a = form of high cloud (Code 2).
- N = amount of total cloud in tenths.
- h = height of base of low cloud (Code 3).
- ww = present weather (Code 4).
- W = weather 3 hours preceding (Code 5).
- V = visibility (Code 6).
- V_s = visibility to sea (Code 6).
- BBB = barometer in tenths of mm.
- K = state of sea (Code 7).
- c = characteristic of barometric tendency (Code 8).
- C = cloud of greatest amount (Code 2).
- dd = direction from where these clouds are coming (01 = 10° = N. 10° E, 07 = 70° = N. 70° E.; 13 = 130° = S. 50° E.).
- vv = speed of these clouds per hour in kilometres.

Code 1 = speed of low cloud = F_1

0 = no motion.
1 = 1– 14 km. per hour (1– 4 m. per sec.)
2 = 15– 28 „ „ „ (4– 8 „ „ „)
3 = 29– 42 „ „ „ (8–12 „ „ „)
4 = 43– 57 „ „ „ (12–16 „ „ „)
5 = 58– 72 „ „ „ (16–20 „ „ „)
6 = 73– 86 „ „ „ (20–24 „ „ „)
7 = 87–101 „ „ „ (24–28 „ „ „)
8 = 102–115 „ „ „ (28–32 „ „ „)
9 = more than 115 km. per hour (more than 32 m. per sec.)

Code 2 = forms of cloud = A, a, C.

1 = Cirrus (Ci).
2 = Cirro-stratus (Ci-St).
3 = Cirro-cumulus (Ci-Cu).
4 = Alto-cumulus (A-Cu).
5 = Alto-stratus (A-st).
6 = Strato-cumulus (St-Cu).
7 = Nimbus (Nb)
8 = Cumulus (Cu)
9 = Cumulo-Nimbus (Cu-Nb).
0 = Stratus (St).

Code 3 = height of base of low cloud = h.

0 = base of cloud under 50 m.
1 = „ „ „ at 50 100 m.
2 = „ „ „ „ 100– 200 m.
3 = „ „ „ „ 200– 300 m.
4 = „ „ „ „ 300– 600 m.
5 = „ „ „ „ 600–1000 m.
6 = „ „ „ „ 1000–1500 m.
7 = „ „ „ „ 1500–2000 m.
8 = „ „ „ „ 2000–2500 m.
9 = „ „ „ „ above 2500 m.

Code 4 = present weather = ww.

0 = fine, cloudless	0 = cloud decreasing. 1 = no change in cloud. 2 = cloud increasing. 3 = visibility more than 50 km. 4 = circle round sun or moon.
1 = very cloudy	5 = after mist or haziness. 6 = after rain or drizzle. 7 = after snow or wet snow. 8 = during or after thunderstorm. 9 = after thunderstorm.
2 = haziness or fog	0 = clear in zenith, just begun. 1 = overcast, just begun. 2 = clear in zenith, at intervals. 3 = overcast, at intervals. 4 = clear in zenith } since some time, 5 = overcast } becoming clearer. 6 = clear in zenith, since some time. 7 = overcast, since some time. 8 = clear in zenith } since some time, 9 = overcast } becoming thicker.
3 = showers at intervals	0 = with light rain. 1 = ,, hail, or hail and rain. 2 = ,, wet snow. 3 = ,, snow. 4 = ,, rain, decreasing. 5 = with heavy rain. 6 = ,, rain, increasing. 7 = ,, hail, or hail and rain. 8 = ,, wet snow. 9 = ,, snow.
4 = drizzle .... 5 = rain .... 6 = snow, or snow and hail .... 7 = wet snow or rain and snow .... 8 = hail or rain and hail	0 = light at intervals. 1 = ,, constantly. 2 = ,, increasing. 3 = ,, decreasing. 4 = moderate at intervals. 5 = ,, constantly. 6 = ,, increasing. 7 = ,, decreasing. 8 = heavy at intervals. 9 = ,, constantly.
9 = thunderstorm (heavy shower)	0 = light, without hail. 1 = ,, with hail. 2 = moderate, without hail. 3 = ,, with hail. 4 = heavy without hail. 5 = ,, with hail. 6 = ,, with storm. 7 = ,, with hail and storm. 8 = ,, shower without hail. 9 = ,, ,, with hail.

Code 5 = weather 3 hours preceding = W.

0 = clear, cloudless, without rain or snow.
1 = very cloudy, ,, ,, ,,
2 = constantly clouded, ,, ,, ,,
3 = haziness or fog, ,, ,, ,,
4 = thick fog, ,, ,, ,,

(*Continued on page* 1132.)

SPECIFICATION OF THE BEAUFORT SCALE WITH

Beaufort Number.	Admiral Beaufort's General Description of Wind.	Admiral Beaufort's Specification, 1805.		Description of Wind.	Mode of Estimating aboard Sailing Vessels.
0	Calm	Calm		—	—
1	Light air ..	Just sufficient to give steerage way.		Light breeze	Sufficient wind for working ship.
2	Slight breeze	That in which a well-conditioned man-of-war, with all sail set and "clean full," would go in smooth water from	1 to 2 knots.	Light breeze	Sufficient wind for working ship.
3	Gentle breeze		3 to 4 knots.	Light breeze	Sufficient wind for working ship.
4	Moderate breeze		5 to 6 knots.	Moderate breeze	Forces most advantageous for sailing with leading wind and all sail drawing.
5	Fresh breeze	That to which she could just carry in chase "full and by."	Royals, etc.	Moderate breeze	Forces most advantageous for sailing with leading wind and all sail drawing.
6	Strong breeze		Single-reefed topsails or top-gallant sails.	Strong wind	Reduction of sail necessary with leading wind.
7	Moderate gale (*High Wind*)		Double-reefed topsails, jib, etc.	Strong wind	Reduction of sail necessary with leading wind.
8	Fresh gale .. (*Gale*)		Triple-reefed topsails, etc.	Gale forces	Considerable reduction of sail necessary even with wind quartering.
9	Strong gale ..		Close-reefed topsails and courses.	Gale forces	Considerable reduction of sail necessary even with wind quartering.
10	Whole gale ..	That with which she could scarcely bear close-reefed main topsail and reefed foresail.		Storm forces	Close reefed sail running, or hove to under storm sail.
11	Storm ..	That which would reduce her to storm stay-sails.		Storm forces	Close reefed sail running, or hove to under storm sail.
12	Hurricane ..	That which no canvas could withstand.		Hurricane ..	No sail can stand even when running.

* It has been decided that for statistical purposes winds of force less than 8 shall not be counted as gales, and to avoid the ambiguity implied by the use of the term "moderate gale" for force 7 the Beaufort description has been modified by the substitution of the descriptions in italics for forces 7 and 8.

EQUIVALENTS OF THE NUMBERS OF THE SCALE.

Beaufort Number.	Specification of Beaufort Scale. For Coast Use.	Specification of Beaufort Scale. For Use on Land.	Mean wind force in lb. per sq. ft. at standard density.	Equivalent velocity in miles per hour.	Limits of Velocity.
0	Calm	Calm; smoke rises vertically.	0	0	Less than 1
1	Fishing smack * just has steerage way.	Direction of wind shown by smoke drift, but not by wind vanes.	·01	2	1–3
2	Wind fills the sails of smacks, which then move at about 1–2 miles per hour.	Wind felt on face; leaves rustle; ordinary vane moved by wind.	·08	5	4–7
3	Smacks begin to careen, and travel about 3–4 miles per hour.	Leaves and small twigs in constant motion; wind extends light flag.	·28	10	8–12
4	Good working breeze; smacks carry all canvas, with good list.	Raises dust and loose paper; small branches are moved.	·67	15	13–18
5	Smacks shorten sail ..	Small trees in leaf begin to sway; crested wavelets form on inland waters.	1·31	21	19–24
6	Smacks have double reef in main sail. Care required when fishing.	Large branches in motion; whistling heard in telegraph wires; umbrellas used with difficulty.	2·3	27	25–31
7	Smacks remain in harbour, and those at sea lie to.	Whole trees in motion; inconvenience felt when walking against wind.	3·6	35	32–38
	All smacks make for harbour, if near.	Breaks twigs off trees; generally impedes progress.	5·4	42	39–46
9	—	Slight structural damage occurs (chimney pots and slates removed).	7·7	50	47–54
10	—	Seldom experienced inland; trees uprooted; considerable structural damage occurs.	10·5	59	55–63
11	—	Very rarely experienced; accompanied by widespread damage.	14·0	68	64–75
12	—	—	Above 17·0	Above 75	Above 75

* The fishing smack in this column may be taken as representing a trawler of average type and trim. For larger or smaller boats and for special circumstances allowance must be made.

Table I.—Temperature. ***Degrees Absolute to Degrees Fahrenheit.***

The equations are $A = 273 + \frac{5}{9}(F - 32)$, $F = 32 + \frac{9}{5}(A - 273)$.

Thousandths of an Inch.

Inch	·001	·002	·003	004	·005	·006	·007	·008	·009
Millibars.	·0	·1	·1	·1	·2	·2	·2	·3	·3

For brevity, the fundamental equations may be written :—

$$g_{45} = 980·617 \text{ c.m./sec}^2.,$$

density of mercury at normal freezing-point of water = 13·5955

1 mercury-inch = 33·8632 millibars, 1 mercury millimetre = 1·33320 millibars.

1000 millibars = 1 bar = 29·5306 mercury-inches = 750·076 mercury millimetres, using 1 inch = 2·54000 cm.

TABLE II (A).

Relation between inches and millimetres for comparison of readings of barometers graduated in these units.

In.	Mm.	In.	Mm.	In.	Mm.	In.	Mm.
27·0	685·8	28·0	711·2	29·0	736·6	30·0	762·0
27·2	690·9	28·2	716·3	29·2	741·7	30·2	767·1
27·4	696·0	28·4	721·4	29·4	746·8	30·4	772·2
27·6	701·0	28·6	726·4	29·6	751·8	30·6	777·2
27·8	706·1	28·8	731·5	29·8	756·9	30·8	782·3

NOTE.—(1) The table is based on the *legal* relation 1 in. = 2·5400 cm., which agrees very closely indeed with the best experimental comparisons.

(2) As millimetre barometers have the same standard temperature 0° C. for the brass scale and for the mercury, while inch barometers have a standard 32° F. for the mercury and 60° F. for the brass scale, the readings require correction for temperature by appropriate tables before the comparison can be made.

---

5 = showers at intervals.
6 = rain or drizzle.
7 = snow or wet snow.
8 = hail, or rain and hail.
9 = thunderstorms.

Code 6 = visibility = V, Vs.

0 = objects not visible at 50 metres.
1 = objects visible at 50 metres but not at 200 metres.
2 = „ „ 200 „ „ 500 „
3 = „ „ 500 „ „ 1,000 „
4 = „ „ 1,000 „ „ 2,000 „
5 = „ „ 2,000 „ „ 4,000 „
6 = „ „ 4,000 „ „ 7,000 „
7 = „ „ 7,000 „ „ 12,000 „
8 = „ „ 12,000 „ „ 30,000 „
9 = „ „ 30,000 and exceptionally clear air.

Code 7 = state of sea = K.

0 = no swell.
1 = moderate swell, calm sea.
2 = strong swell, „ „
3 = no swell, moderate sea.
4 = moderate swell „
5 = strong swell, moderate sea.
6 = rough sea.
7 = high sea.
8 = very high sea.
9 = phenomenal, precipitous.

Code 8 = characteristic of barometric tendency = c (3 hours preceding).

0 = steady or rising ....
1 = rising, now steady ....
2 = rising, now falling ....
3 = falling or steady, now rising ....
4 = unsteady, but rising ....

} barometer is higher, or the same as three hours preceding.

5 = falling constantly ....
6 = falling, now steady ....
7 = falling, now rising ....
8 = steady or rising, now falling ....
9 = unsteady, but falling.

} Barometer is lower than three hours preceding.

Code 9 = humidity* = H.

0 = 95–100 per cent.
9 = 90– 94 „
8 = 80– 89 „
7 = 70– 79 „
6 = 60– 69 „
5 = 50–59 per cent.
4 = 40–49 „
3 = 30–39 „
2 = 20–29 „
1 = 0–19 „

---

* Humidity = dampness. In meteorology it is used for relative humidity or proportion of moisture to saturation.

TABLE III.—TABLE OF CORRECTIONS FOR REDUCING BAROMETRIC HEIGHTS TO 0° C. AND TO SEA LEVEL.

NOTE.—The barometric reading should first be corrected for index error. This error may be neglected if it is less than 0·3 mm. The + sign indicates that the correction is to be *added* to the barometric ruling. The − sign indicates that the correction is to be *subtracted*.

Temperature by the thermometer attached to the barometer			−4° C. 24·8° F.	−2° C. 28·4° F.	0° C. 32° F.	+2° C. 35·6° F.	4° C. 39·2° F.	6° C. 42·8° F.	8° C. 46·4° F.	10° C. 50° F.	12° C. 53·6° F.	14° C. 57·2° F.	16° C. 60·8° F.	18° C. 64·4° F.	20° C. 68° F.	22° C. 71·6° F.	24° C. 75·2° F.	26° C. 78·8° F.	28° C. 82·4° F.

Letters used to indicate the state of the weather :—

b = blue sky.	p = passing showers.
c = clouds (detached).	q = squally.
d = drizzling rain.	r = rain.
e = wet without rain.	s = snow.
f = foggy.	t = thunder.
g = gloomy.	u = threatening appearance.
h = hail.	v = visibility, objects at a distance unusually visible.
l = lightning.	w = dew.
m = misty.	z = haze.
o = overcast.	

ALGERIA.

Transmitting station—Oran (Ain-el-Turck) FUO.

Wavelength	3,300 m. C.W.	
Times of sending	0300 G.M.T.	Observations at 0100 G.M.T.
	0900 ,,	,, ,, 0700 ,,
	1145 ,,	,, ,, 0700 ,,
	1445 ,,	,, ,, 1300 ,,
	2000 ,,	,, ,, 1800 ,,

The 1145 message commences with the words "Meteo Alger," the remaining messages with the words "Meteo Oran."

0300 *Message*.

0100 Observations from Oran.

Code :—BBBDD FWTT βbb

0900 *Message*.

0700 Observations from—

31 La Senia (Oran).
32 Algiers.
33 Constantine.

Code :—Station number (two figures) BBBDD FWTTV βbbRR MMmmu.

Where V denotes visibility (special code below).

Groups giving upper winds in the Eiffel Tower code may be added.

The message also contains a repetition of the 0845 report from Mediouna.

NOTE.—The observation of State of Sea in the groups relating to Oran is made at Cap Falcon.

1445 *and* 2000 *Messages*.

1300 and 1800 observations respectively from the above Algerian Stations, together with repetitions of the 1430 and 1945 reports respectively from Mediouna.

Code :—BBBDD FWTT βbb.

1145 *Message*.

0700 Observations from—

Fal. =	Cap Falcon	(S)	
Alg. =	Algiers	(S)	
Nem. =	Nemours	(S)	S = Coastal Station.
Tns. =	Tenes	(S)	L = Inland Station.
Clb. =	Colomb Bechar	(L)	
Lag. =	Laghouat	(L)	
Tou. =	Touggourt	(L)	

Code :—Station name (three letters) BBDDF WbVu (coastal stations). BBDDF Wb (inland stations).

Where BB expresses the pressure in whole mm.

b is the barometric tendency (special code below) and

V the visibility (special code below).

This is followed by a statement in plain language giving the general situation and a forecast for the north coasts of Africa.

Code for Visibility (V).

0 =	Objects not visible at	50 m.
1 =	,, ,, ,,	100 m.
2 =	,, ,, ,,	500 m.
3 =	,, ,, ,,	1,000 m.
4 =	,, ,, ,,	2,000 m.
5 =	,, ,, ,,	4,000 m.
6 =	,, ,, ,,	10,000 m.
7 =	,, ,, ,,	20,000 m.
8 =	,, ,, ,,	50,000 m.
9 =	,, visible at	50,000 m.

Code for Barometric Tendency (b).

	Tendency in half-millimeters
0 = Steady	0 or 1
1 = Rising slowly	2 or 3
2 = Rising	4 to 7
3 = Rising rapidly	8 to 12
4 = Rising very rapidly	more than 12
5 = Falling slowly	2 or 3
6 = Falling	4 to 7
7 = Falling rapidly	8 to 12
8 = Falling very rapidly	more than 12

ARGENTINA

The Naval Observatory at Darsena Norte, situated on the northern entrance to the Port of Buenos Ayres, sends out, through the radio station located there, signals once daily at 10 p.m. (0200 G.M.T.) (Sundays and holidays excepted), on a wavelength of 800 metres. Their method of transmission consists of the sending of a series of five groups of dashes with a dot at each minute.

The method of transmission is as follows :—

a)	from 1.55′.00″ to 1.55′.50″	(Greenwich a.m. mean time) a warning signal consisting of an unbroken series of dashes ;
	at 1.56′.00″	a dot representing the 1st time-signal.
(*b*)	from 1.56′.15″ to 1.56′.50″	an unbroken series of dashes ;
	at 1.57′.00″	a dot representing the 2nd time-signal.
(*c*)	from 1,57′.20″ to 1.57′.50″	an unbroken series of dashes ;
	at 1.58′.00″	a dot representing the 3rd time-signal.
(*d*)	from 1.58′.25″ to 1.58′.50″	an unbroken series of dashes ;
	at 1.59′.00″	a dot representing the 4th time-signal.
(*e*)	from 1.59′.30″ to 1.59′.50″	an unbroken series of dashes ;
	at 2.00′.00″	a dot representing the 5th and last time-signal.

Time-Signals.	Greenwich time.
1st	1.56′.00″
2nd	1.57′.00″
3rd	1.58′.00″
4th	1.59′.00″
5th	2.00′.00″

Duration of dot = ¼ second.

AUSTRALASIA

Time signals are transmitted by the following stations :—

Adelaide Radio .. At 12.30 a.m. and p.m. Melbourne Time (0230 and 1430 G.M.T.), international time-signals being used. Wavelength 600.

Melbourne Radio .. At noon and midnight (Sundays excepted), Victorian standard time (0157–0200 and 1357–1400 G.M.T.), international time-signals being used. Wavelength 600 m.

Perth Radio .. At 9 a.m. and p.m. Melbourne Time (2300 and 1100 G.M.T.). Wavelength 600 metres.

Ocean forecasts are transmitted by the following stations at the hours specified (Melbourne time) :—

Perth, 11 p.m. (1300 G.M.T.).
Adelaide, 9.30 p.m. (1130 G.M.T.).
Brisbane, 10 p.m. (1200 G.M.T.).
Melbourne, 9 p.m. (1100 G.M.T.).
Sydney, 8.30 a.m. and p.m. (2230 and 1030 G.M.T.).

Other stations repeat as necessary.

At present an official Ocean Forecast is transmitted daily from the Central Weather Bureau, Melbourne, to all Radio Stations in Australia, also Port Moresby (New Guinea), and it is preceded by a specific statement of sea conditions existing at 9 a.m. around Australia, and sea disturbances off any part of the coast. This information can be obtained by vessels upon request. When weather conditions are severe storm warnings are sent out broadcast by the Shore Stations, and vessels receiving the warnings are requested to communicate them to passing shipping by means of code flags.

Each of the principal radio stations is supplied with a barometer for the purpose of giving information, so that if a shipmaster desires he may obtain the barometer reading, also wind and weather conditions at a radio station, by asking the operator in charge. Daily weather reports (barometer readings, state of wind, weather and sea) are received at the Meteorological Bureau, Melbourne, from shipmasters whenever their vessels are in Australian waters.

The restrictions which were placed on wireless messages during the war have now been removed, and steps have been taken to bring about the resumption of radio weather reports from ships when 300 miles or more from the Australian coastline—many messages are now being received.

NEW ZEALAND

New Zealand stations send out weather forecasts on 600-metre wavelength, Mondays to Fridays, inclusive, as follows :—

Radio Awarua	8.30 p.m.
Radio Wellington	9 p.m.
Radio Awanui	10 p.m.

The above are New Zealand mean time—11½ hours ahead of G.M.T.

The forecast is not sent out on Saturday or Sunday unless the condition are exceptional.

Provisional Wireless Time Service.

It is notified for general information that arrangements have been made for a provisional wireless time service from the standard mean time clock of the Hector Observatory, Wellington, New Zealand. This service will begin on———— (*see* Note below).

The time signals are transmitted by the Wellington Radio Station on a wavelength of 600 metres; the sending key at the radio station being automatically operated by the observatory clock.

The time signal begins at 21 hours 0 minutes 0 seconds Greenwich Mean Time (8 hours 30 minutes p.m. New Zealand Time), and is repeated on the 1st, 2nd, 4th, and 5th minutes.

Each time signal begins exactly at the beginning of the minute and lasts for one second approximately.

In addition to the automatic time signals other signals are transmitted by hand, but they must NOT be used as time signals.

The signals are transmitted in the following manner:—

Greenwich Mean Time.

h.	*m.*	*s.*		*h.*	*m.*	*s.*	
20	58	00	to	20	59	05	New Zealand Observatory Time Signals twenty-one hours Greenwich Mean Time. New Zealand Observatory Time Signals twenty-one hours Greenwich Mean Time.
20	59	15	to	20	59	45	— — · — — · — — · — — · etc.
21	00	00	to	21	00	01	— Time Signal.
21	00	15	to	21	00	45	— — · — — · — — · — — · etc.
21	01	00	to	21	01	01	— Time Signal.
21	01	15	to	21	01	45	— — · — — · — — · — — · etc.
21	02	00	to	21	02	01	— Time Signal.
21	02	15	to	21	03	45	— — · — — · — — · — — · etc.
21	04	00	to	21	04	01	— Time Signal.
21	04	15	to	21	04	45	— — · — — · — — · — — · etc.
21	05	00	to	21	05	01	— Time Signal.

The Greenwich Mean Times that the Wireless Time Signals begin at, and the corresponding New Zealand Times are:—

		Greenwich Mean Time.				New Zealand Mean Time.			
		h.	*m.*	*s.*		*h.*	*m.*	*s.*	
1st Time Signal	..	21	00	00	..	8	30	00	p.m.
2nd ,, ,,	..	21	01	00	..	8	31	00	p.m.
3rd ,, ,,	..	21	02	00	..	8	32	00	p.m.
4th ,, ,,	..	21	04	00	..	8	34	00	p.m.
5th ,, ,,	..	21	05	00	..	8	35	00	p.m.

There is no time signal at 21 hours 03 minutes 00 seconds.

The provisional wireless time service will be in operation on Tuesdays and Fridays, provided satisfactory observations have been obtained. The wireless time service will be suspended when owing to bad weather or other causes it is not possible to supply accurate time signals.

N.B.—The date at which this service should begin is left open until the fate of the New Zealand Standard Time Bill is decided by Parliament, because if the Standard Time Bill is passed all New Zealand Mean Times quoted in the notice would have to be increased by 30 minutes.

General Conditions, Australia and New Zealand.

Any request for information must be addressed to the Coast Station in the form of a Service message signed by the Commander or responsible officer deputed by him. Information regarding weather should not be asked for during hours of darkness, but should be listened for at the regular transmission periods. Providing, however, that there is no jamming, permission is granted for ships to call up shore stations during the daylight hours to obtain weather reports.

AUSTRIA

Transmitting station, Deutsch Altenberg (near Vienna) OHL. Wavelength 5,600 m. c.w. (or in the case of disturbance of the main plant 3,500 m. spark).

Time of sending—1000 (observations at 21h. and 7h.).
1540 (observations at 14h.)

Observations relate to the following stations:—

01 = Vienna.
02 = Sonnblick (Lat. 47° 3′. Long. 12° 57″).
03 = Feldkirch.
04 = Innsbruck.
05 = Salzburg.
06 = Linz.
07 = Gratz.
08 = Klagenfurt.
09 = Obir (lat. 46° 30′. Long. 46° 30′).

1,000 *Report*:—Station number, code BBBDD FWTTC BBBDD FWTTC βbbRR MMmm.

1540 *Report*.—BBBDD FWTTC.

In the case of high-altitude stations (Sonnblick 3,100 m.; Obir 2,041 m.), barometric pressure is not reduced.

BALTIC

The stations of Riga (KCA), Leepaja (Libau) (KCB), and Ventspils (Windau) (KCC) are sending if necessary, a CQ mine-warning, and will send in the nearest time meteorological, and in the winter, nautical (ice warning) signals from the Gulf of Riga.

BARBADOS

Should steamers require the local weather reports, they are given. No arrangements are made for sending Time, Hydrographic or Press Signals.

BELGIUM

Hourly Meteorological Reports are issued daily from Brussels (HS) on a wavelength of 1400 m. at 25 minutes past each hour from 0625 to 1525 (excepting 0825, 1225 and 1425) in exactly the same code as that used for hourly reports in Great Britain (q.v.). The reports refer to Brussels and reports from Ostend are added to the Brussels message two or three times daily. Observations for Brussels include pilot balloon ascents.

A report for Brussels in standard code for synoptic reports is also issued at 0715, 1315, 1815 G.M.T. These reports refer to observations at 7h, 13h, and 18h respectively.

The Belgian Meteorological Office transmits daily at noon a weather forecast for Belgium and Western Europe in French. This report is issued specially for amateurs, and therefore is transmitted very slowly and repeated. The transmitting station is Uccle (H.S.) and the wavelength used is 1,500 metres. The message lasts for about 20 minutes; it could very easily be picked up in England, and would prove a very good Morse lesson for beginners.

BELGIAN CONGO

The following stations in this territory, viz.: Kinshasa, Coquilhatville, Umangi-Lisala, Lusambo, Bunia-Kilo, Lukuga, Kindu, Stanleyville, and Elizabethville, have been organised to deal with time signals as follows:—

(1) Daily reception of time signals from Lyons Station (France).

(2) Emission of an approximate time signal to stations within range.

BOLIVIA

In this Republic an important meteorological service is carried on as an auxiliary of the telegraphs. Father Tortoso, Director of the Astronomical Observatory of the San Calixto College, collects and collates a number of data covering his district. The Marconi Wireless Telegraph Station in Viacha possesses also an annexe wherein are installed instruments for this purpose. Small meteorological installations also exist in Tarija, Villa Montes, Ulla-Ulla and Copacabana, whilst others are projected in Cuatro Ojos and Puerto Suarez.

BRAZIL

The Naval Radio Station at Ilha do Governador (SOH) transmits twice daily a series of time signals, planned in accordance with the International Convention, and transmitted on a wavelength of 1,800 metres. These signals start at 10 hours 55 minutes 0 seconds, and at 20 hours 55 minutes 0 seconds, Rio de Janeiro time (1357–1400 and 2357–2400 G.M.T.), and follow the same procedure as that detailed below under " France, Eiffel Tower." Like the French signals, the Brazilian series is introduced by the letter O (▬ ▬ ▬) of the Morse alphabet, and the authorities notify us that these introductory signals, which finish at 10 hours 56 minutes 50 seconds, " are for the special use of the observatory, and, therefore, it may be decided at any time to dispense with them." They also state that in case of " an accident preventing the transmission for correct reception of the signals either at 11 or 21 o'clock, the signals will be repeated in each case half an hour later at 27–30 minutes, instead of 57–60 minutes."

Directly after the time signals for 11 and 21 o'clock, meteorological and weather signals are issued.

This report includes observations taken from Buenos Ayres to Pernambuco, and, in brief, up to the extreme north.

The following is the code in which the meteorological reports are issued :—

Station Call Letters, BBBDDFWS.

Example : SL 567021141 FT 567020 XX RF, etc.

The station letters are as follows :—

MN = Manáos.	VT = Victoria.	FP = Florianopolis.
BL = Belem.	CF = Cabo Frio.	RG = Rio Grande.
SL = S. Luiz.	RJ = Rio Janeiro	PA = Porto Alegre.
FT = Fortaleza.	SP = S. Paulo.	CB = Corumbà.
RF = Recife.	ST = Santos.	MV = Montevidéo.
BH = Bahia.	PG = Paranaguá.	AB = Buenos Ayres.

BRITISH HONDURAS

Weather reports are sent out daily by the station at Belize from June to November inclusive at 1140 and 2400 G.M.T. Wavelength 1,000 metres.

BULGARIA

Meteorological reports are issued three times daily from Sofia (FF) on a wavelength of 3,800 metres at 0530, 0900, 1,545 G.M.T. (?)

CANADA AND NEWFOUNDLAND

A time signal is sent out by the Camperdown Station daily at 2 p.m. (G.M.T.) on a wavelength of 600 metres.

Weather and ice reports are broadcasted as follows :—

VAL = Barrington Passage	0130 and 1330	G.M.T.	1,600 m.	wavelength
VCE = Cape Race	0215 ,, 1415	,,	600 m.	,,
VCM = Belle Isle....	0230 ,, 1430	,,	600 m.	,,
? = Mt. Pearle (Naval Station)	? ?	,,	1,600 m.	,,
VCU = Cape Sable	0200 ,, 1400	,,	600 m.	,,
VCG = Fame Point	0145 ,, 1345	,,	600 m.	,,

The stations of Alert Bay, B.C., Belle Isle, Camperdown, N.S., Cape Bear, Cape Lazo, Cape Race, Cape Ray, Cape Sable, Clarke City, Dead Tree Point, Digby Island, Estevan, B.C., Fame Point, Father Point, Gonzales Hill, Grindstone Island, Grosse Isle (Quebec), Harrington, Heath Point, Ikeda Head, Kingston (Ontario), Midland (Ontario), Montreal, North Sydney, N.S., Pachena, Partridge Island, Pictou, N.S., Point Amour, Point Edward, Point Grey, Point Riche, Port Arthur (Ontario), Port Burwell, Quebec, Sable Island, Sault Ste. Marie (Ontario), Three Rivers (Quebec), Tobermory (Ontario), Toronto, and Triangle Island receive weather forecasts from the Canadian Meteorological Service at 10 p.m. These advices will be transmitted free to any ship station on request. In addition, the station transmits, without coast charge, radiotelegrams of the following kinds :—

1. Any message concerning the navigation of a vessel sent by the captain of the vessel and intended for any department of the Government, any officer of the Government, or the officer in charge of the coast station.

2. Messages exchanged between the captain of any vessel and any person whatsoever concerning the state of the weather, the condition of the tide or ice, or reports on aids to navigation.

CANARY ISLANDS

A meteorological report, in code, is issued twice daily from the Izana Observatory on Teneriffe Island to Carabauchel (a military station in Madrid) at 0950 and 1415 G.M.T.

CHILE

RADIOTELEGRAPH TIME SIGNAL. TRANSMITTED EVERY NIGHT EXCEPTING SATURDAYS AND SUNDAYS AND HOLIDAYS OF THE OFICINA DE HIDROGRAFIA Y NAVEGACION, VALPARAISO.

Important.—The signals will commence punctually at 12 h. 55 m., Greenwich Mean Time, continuing for exactly five minutes and terminating precisely at 13 h., Greenwich Mean Time (8 h. 12 m., 13·7 s. to 8 h. 17 m. 13·7 s., local time).

The Oficina de Hidrografía y Navegación transmits daily the radiotelegraph time signal commencing exactly at 12 h. 55 m., Greenwich Mean Time, and continuing for five minutes. (Length of wave, 600 metres.) During this interval each tick or stroke given by the master chronometer of the Oficina is transmitted by the radiotelegraph wave, excepting the twenty-ninth second of every minute, and the last ten seconds of each one of the five minutes. At the exact termination of the five minutes, which will be 1300 Greenwich time, the cipher which indicates the end of the signal is marked by a long contact, as may be seen exactly from the diagram.

If for any reason there should be an error in transmission, the signal "Senal Nula" (Signal null) will be transmitted repeated three times at 1301 (G.M.T.).

RADIOTELEGRAPH WEATHER REPORTS TRANSMITTED DAILY BY THE STATION OF VALPARAISO.

The Radiotelegraph Station of Valparaiso CCE transmits daily and with the same length of wave as that with which the time signal is transmitted—viz., 600 metres—the meteorological conditions of certain points on the coast and of the Island of Juan Fernandez.

In order that these signals may be received without difficulty by all vessels, they will be transmitted very slowly.

Except on Sundays and holidays there will be transmitted each day at 12 noon, civil mean time of the meridian 70° 41′ 34″ 5 W. (1643 G.M.T. nearly), the meteorological conditions at 8 a.m., and at 9 p.m. (time of the same meridian). those prevailing at 4 p.m., there being added to the last report a résumé containing the variations undergone by the atmospheric factors of the day.

The stations on the coast will be represented by letters of the alphabet, generally by the first letter of their name, and in the following form :—

V = Valparaiso.	J = Juan Fernandez.	R = Raper.
T = Talcahuano.	M = Mocha.	P = Punta Arenas.
C = Corral.	G = Guafo.	

The signal will be sent commencing with the letters O.M.C. (Meteorological Office of Chile). Next will be given the barometric pressure in millimetres at sea-level, but suppressing the figure representing the hundreds; thus, to indicate a pressure of 753 millimetres, the figure 7 will be suppressed and the number 53 will be transmitted.

Following upon that number 53 will be another numerical figure indicating the direction of the wind. The figures used will be from 1 to 8, as follows: 1 corresponding to N.; 2, NE; 3, E; 4, SE; 5, S; 6, SW; 7, W; 8, NW.

Lastly will follow another figure indicating the force of the wind, according to the scale of Beaufort; but when forces above 8 have to be given, they will be signalled in words: nine, ten, eleven and twelve.

In the event of its not being possible to communicate the meteorological conditions at any of the stations, the word "N" will be placed before the representative sign of the station in question, but if it is only a part of the information that cannot be given, that part will be replaced by the letter "X."

If the weather is not good in the ports indicated by the bulletin, there will be added in current language some of the words, such as storm, mist, rain or sun.

In order that this may be better understood, we give below a specimen bulletin :—

O.M.C. V 5534, T 5921, C 5172, M 5765, etc.

which signifies :—

Valparaiso,	barometric pressure	755 mm.,	wind	E,	force	4
Talcahuano	,,	759 mm.	,,	NE	,,	1
Corral	,,	751 mm.	,,	W	,,	2
Mocha	,,	757 mm.	,,	SW	,,	5

CHINA

The Shanghai-Zikawei station receives the time of the 8th time-belt (120° east of Greenwich) from the observatory of Zikawei; and transmits it on the wavelength of 850 metres according to the following table :—

from	10.53′	to	10.54′	a.m.	preliminary signals.
from	10.54′	to	10.54′.50″	a.m.	a series of "G."
at	10.55′			a.m.	a dot.
from	10.56′	to	10.56′.50″	a.m.	a series of "O."
at	10.57′			a.m.	a dot.
from	10.58′	to	10.58′.50″	a.m.	a series of "X."
at	10.59′			a.m.	a dot.
from	4.53′	to	4.54′	p.m.	preliminary signals.
from	4.54′	to	4.54′.50″	p.m.	a series of "G," etc.

continuing as in the morning.

These times are 0253-0259 and 0853-0859 (G.M.T.).

The time-signal, morning and evening, is followed immediately by a meteorological telegram.

During the typhoon season, the station transmits, in addition to these periodical messages, useful information on the state of the weather.

No charge is made for the meteorological information.

The Cape d'Aguilar station sends time of Hong-Kong observatory on a wavelength of 1,000 metres at 0356-0400 and 1256-1300 (G.M.T.).

CUBA

The experimental station of de Belen at Havana has been assigned to the reception of meteorological signals. (*No further particulars are yet to hand.*)

CZECHO-SLOVAKIA

Transmitting station: Prague (PRG).
Wavelength: 4,500 m. c.w.
Normal range: 3,000 km.
Times of sending: 0930 G,M,T, (observations at 7 h.)
,, ,, 1530 G.M.T. (observations at 13h.)
,, ,, 2030 G.M.T. (observations at 18 h.)

DENMARK

Wireless Meteorological Reports.

Transmission station : Lyngby Radio (near Copenhagen).
(position 56° 46′ N. ; 12° 29′ E.)
Length of wave : 3,650 metres C.W.
Call signal : OXE.
Normal range : 3,000 km.

Times of sending : 0735 G.M.T. (observations at 0700 G.M.T.)
,, ,, 1335 G.M.T. (observations at 1300 G.M.T.)
,, ,, 1835 G.M.T. (observations at 1800 G.M.T.)

Observations relate to the following stations :—

		Position.	
		Lat.	*Long.*
Copenhagen	0 1	55° 41′	12° 35′
Skagen	0 2	57° 44′	10° 38′
Hanstholm	0 3	57° 7′	8° 36′
Blaanvandshuk ..	0 4	55° 33′	8° 5′
Hammeren	0 5	55° 17′	14° 46′

The wireless stations in Copenhagen and Blaavand receive every day from the Meteorological Institute in Copenhagen a repeat in the English language about the atmospheric conditions in the Danish waters. This repeat is on demand sent to ships at sea against payment of 1 franc.

Each radio telegram begins with the words : " Meteo Danois."

The 7 o'clock observations will be transmitted for each station in four groups of five figures : BBBDD, FWTTC, BbbRR, MMmmu, to be deciphered according to the normal international code.

The 13h. observations will be transmitted for each station in three groups, two of 5 figures and one of 3 :—

BBBDD FWTTu βbb

The 18h. observations will be transmitted in three groups of 5, 4, 3 figures respectively :—

BBBDD FWTT βbb

The figure indicating the condition of the sea (u) is omitted in the groups relating to Copenhagen.

Observations which are not reported in one message will be transmitted at the beginning of the next report by adding the hour of the missing observation to the station call signal.

SPECIMEN RADIO TELEGRAMS.

Morning radio :—

meteo danois 01 65732 41139 00000 2112 02 66152 34159 30101 20143 03 68732 24119 00001 16102 05 62528 33129 00000 16112.

Following radio at 1335 :—

meteo danois 0407 68628 32129 20300 19082 01 64952 2117 306 02 65952 13182 001 03 67280 42153 312 04 68530 20171 000 05 60578 53173 316.

In the above morning radio, the Blaavandshuk (04) morning observation is missing. This morning observation will be found in the 1335 radio after the group 0407 (indicating Blaavandshuk at 7 o'clock).

Besides this, the addition of the call signal of a station at the time of observation will be used to correct a faulty message.

ICE REPORTS.

Every day in the winter at 1100 and 2100 (G.M.T.) if ice service has been ordered a radio telegraphic report is sent from the wireless station in Copenhagen. The reports are composed in the English language and contain a short report about the ice in Danish waters. The reports are emitted in the following manner :—

First the sign — • — • — and the call signal OXA (three times), followed by the word "Ice report." Then the number of words, the sign — • • • — and then the text of the report which is given twice, separated by the sign — • • • —. At the end the call signal OXA (three times) and the sign • • • — • — •.

For instance :—

— • — • — OXA OXA OXA Ice report 26w — • • • — Kattegat, Westchannel closed for sailing vessels. Eastchannel pack-ice. Steamers beset southern part of Kattegat open ice. Sound and Bight driftice, along westcoast pack-ice. All lightships removed — • • • —; then full repetition of the text and at last OXA OXA OXA • • • — • — •.

ESTHONIA

Meteorological reports are issued twice daily from Reval (ELN) on a wavelength of 2,000 m. (C.W.) at 0835 and 2100 G.M.T., giving observations for 0700 and 1300 and 2100, made at (1) Reval, (2) Dorpat, and (3) Filsand.

Each message begins with the words Meteo Esthonie. A fixed order of stations is adhered to in the messages, but in the evening messages *all* the 1300 reports precede the 2100 reports. For the 0700 observations the code used is—

BBBDD FWTTW¹ B¹B¹B¹RR MMmm

The value of tendency is given in tenths of a millimetre, and 500 is added for a falling barometer: 50 is also added to the direction of the wind for this case. For the 1300 and 2100 observations the code used is—

BBBDD FWTTW[1]

Example of an evening message:—

Meteo Esthonie 65232 25122 x x 66728 15141 62316 12035 59418 13045 63120 14065

The x x indicate that the midday observations for Dorpat are missing: the last six groups give the 2100 observations at Reval, Dorpat and Filsand.

FALKLAND ISLANDS.

The only meteorological station in existence is at the South Orkney Islands, which the Argentine Government has established with the permission of H.M. Government.

FRANCE.

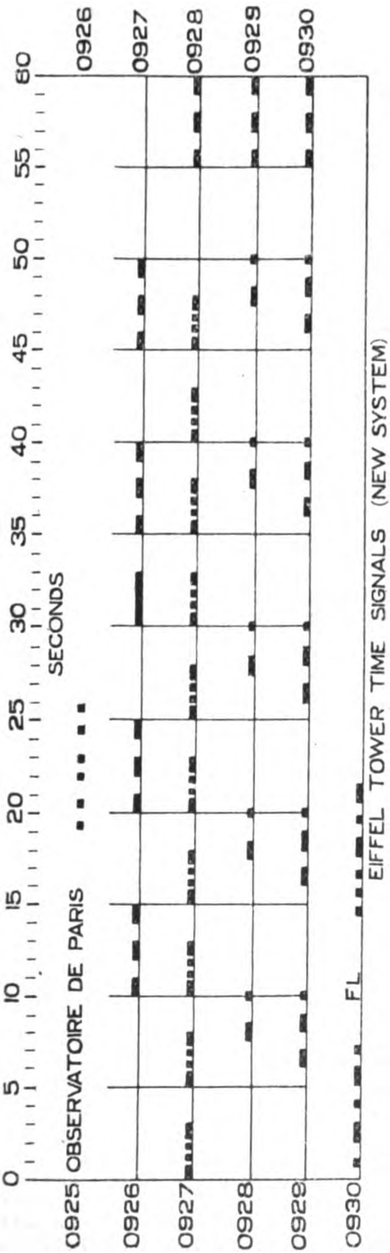
The following arrangements are based on the decision arrived at by the International Time Conference, held in Paris in 1912, modified from time to time in accordance with the experience gained. The latest modifications were made on November 15th, 1921, and are as follows:—

Lyons (YN) now transmits rhythmic scientific signals (beats) at 0800; the international signals from Paris (FL) and beats formerly transmitted at 0955 and 1030 have been advanced by half an hour; the two series of beats transmitted by Paris (FL) at 2110 and at 2300 have been replaced by a single transmission at 2200; the non-musical beats at 2330, the only regular service which was still being sent from the old spark transmitter of the Eiffel Tower, has been suppressed; the Time (old system) signals from Paris (FL) formerly transmitted at 2345 have been advanced by one hour. The only transmissions remaining unchanged are the Time (old system) signals from Lyons (YN) at 0900, and from Paris (FL) at 1045, and the beats from Bordeaux (LY) at 2000. The following is a table of these changes:—

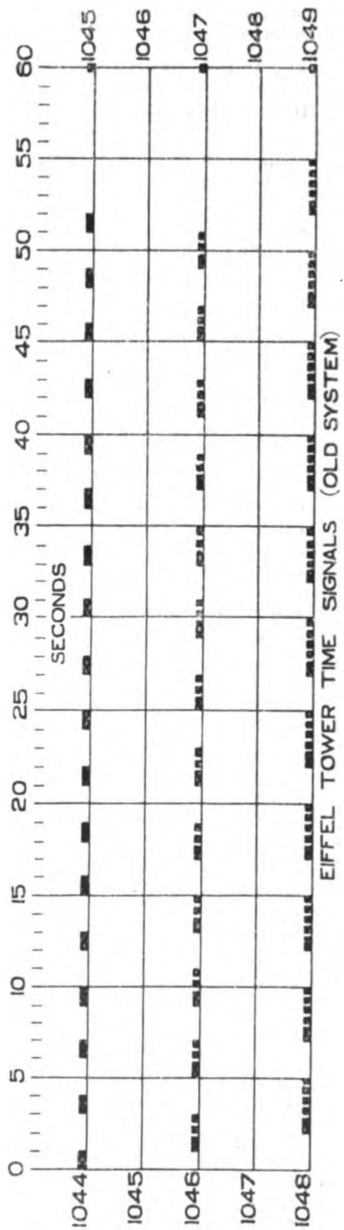
0800	Lyons	(YN)	15,500	C.W.	Rhythmic scientific signals.
0900	Lyons	(YN)	15,500	C.W.	Time signals (old system).
0925	Paris	(FL)	2,600	Spark	International time signals.
1000	Paris	(FL)	2,600	Spark	Rhythmic scientific signals.
1045	Paris	(FL)	2,600	Spark	Time signals (old system).
2000	Bordeaux	(LY)	23,450	C.W.	Rhythmic scientific signals.
2200	Paris	(FL)	2,600	Spark	Rhythmic scientific signals.
2245	Paris	(FL)	2,000	Spark	Time signals (old system).

[For times and nature of transmission previous to these modifications see 1921 edition].

Ordinary Time Signals.



The ordinary Time Signals on both the International and old French Systems are transmitted automatically by means of special apparatus situated at the observatory in Paris and managed by the staff of that establishment.



The connection between this apparatus and the radio station at Eiffel Tower is established a few instants before the transmission by means of subterranean lines.

Reference to the diagram on the opposite page will show the procedure adopted in sending these signals.

The letters O (▬ ▬ ▬) of the first minute and X (▬ • • ▬) of the second minute constitute only advice and tuning signals.

All the dashes, dots, and spaces of dots or dashes of any one letter in the remainder of the signals are of equal duration: dashes = one second, dots = one-quarter of a second, intervals = one second.

OBSERVATOIRE DE PARIS
SECONDS
EIFFEL TOWER TIME SIGNALS (NEW SYSTEM)
FL

SECONDS
EIFFEL TOWER TIME SIGNALS (OLD SYSTEM)

The letters N (— •) which characterise the third minute commence at the seconds, 8, 18, 28, 38, 48, and the beginning of the dots of these same letters coincide exactly with the seconds 10, 20, 30, 40, 50.

In the same way the letters G (— — •) characterising the fourth minute commence at the seconds 6, 16, 26, 36, 46, and the beginning of the dots of these same letters coincide exactly with the seconds, 10, 20, 30, 40, 50.

The second set of time signals starts with a series of " T " (—), followed by one dot at " time " precisely. At the third minute the French operator sends a series of " D " (— • •), which is again followed by a dot at " time," whilst the fifth minute starts a series of " 6 " (— • • • •), again followed by a dot at " time."

The signals " T," " D," and " 6," are sent by hand by an operator at the observatory, only the three dots at " time " (the end of the 1st, 3rd, and 5th minutes) are automatically sent by the special apparatus.

The ordinary time signals, on both the International and old French Systems by night are transmitted in the same way.
